Wondering about good or bad comments on the Clear Speech Speaker from Am-Com Inc in Lakeside MT. It sounds like a simple and fairly inexpensive way to add audio-DSP to a non-DSP HF radio. Comments from actual owners of the item are most appreciated.

I would be interested in that myself, but at the present time, 25 watts is a lot of power. I once knew a fellow who made WAC using 3 watts AM from his mobile when the sunspots were right. And pretty sure he was crystal-controlled. 100 watts SSB would still be nice to have though.

I purchased a second hand FT50r and found out that it can
be programmed via computer. so I started searching for the
necessary stuff. so far I have found the schematic of the
interface and its connections to radio and computer. all I
further need is the software(heard of something called ADMS
or similar). so if you could help me in this way I would be
most grateful. please reply to doi@internetcafe.ro

I remember getting into a discussion with someone at work who had just
gotten into CB and was raving on and on about how convenient it was, and how much fun, so on and so forth. This was back just seconds before "Convoy" was released and triggered the huge boom in idiot CB activity. CB was also only 23 channels at that time, which was the crux of our discussion.
Anyway, she said that she and her husband had opened up their radios, and clipped a wire on the bandswitch and had found a new channel that NOBODY was on. (These were Radio Shack products, and you'll remember the blank spot on the dial that produced no channel activity...until this mod, of course.)And she was bragging about how she and her husband were able to talk in absolute privacy, without interference. At the time, and even today, it was illegal for an owner to open, and modify or repair a CB radio without a First Class Phone FCC licence. I mentioned this. We got into a staggering argument, over it, she insisting that once she had purchased the radio, she could do anything she wanted with it. And that the channel was already there, they had simply 'released' it. This is a pretty common belief, even today. Not only among CB operators, but among scannists and other radio operators as well.

Let's not even get into the freebanders.

The truth is that it has always been illegal for some radios to be opened or serviced without the proper FCC license. What seems to be happening in recent years in the Congress, however, and specifically with respect to CTIA, is that non radio savvy Congressmen are being lobbied in areas where they have no expertise, and have no working knowledge of the hobby, radio services in general, and ham radio in specific, and they pass these sweeping laws in the name of cell phone customers that run roughshod over most every radio service. Ham radio operators have been using radio

patches into the telephone system since there has been radio. Some automatic systems allow direct dial in from the ham radio transmitter. This is no different than a cellphone in theory and varies from cellphone practice only in the type of technology used. These are radio transmitters. No matter what encryption system is used, no matter which mode, they are not going to be secure. And like the spate of recent gun legislation, no one outside of the law, if they are truly motivated, will be stopped from intercepting these transmissions, and using what information may be found there. Perhaps licensing is the answer. But to enact blanket provisions that ban the repair and service of radios to prevent unauthorized mods, strikes two places at stripping away the very essence of hobby radio: 1) the do it yourselfer's who have, historically speaking, been on the cutting edge of radio development as well, and 2) the technically challenged, who would then be at the absolute mercy of equipment purveyors and service technicians who have neither the motivation to provide top drawer service performance, or the ability to be challenged by the customer about the quality of their service performance.
Literally, we would all be at the mercy of people like those currently found at Radio Shack, who would be deciding what is and is not proper operation of a radio, or what we should and should not tolerate as customers.

That's Bullshit. No Congressperson would tolerate being pushed into that corner. No Congressperson should be allowed to tell us that we have no recourse but to take it.
And, no surprise, but Tandy is a member of the very Associations driving
This legislation. They benefit both ways.

> anyone with a little time can get at cell calls today by using
> cell phone diagnostic modes, images from receivers, UHF tuners
> and so on. Cordless phones are even easier.

And this is the other issue. Only the law abiding will be harmed by any

of these laws. The truth is, that today, we have hobbyists writing
their
firmware and distributing chips for some very sophisticated
radios.
Perfectly legal modifications. One which I have seen recently
extended
the shortwave coverage to my Becker 2340 car radio, and changed
the
to accomodate the extended AM band. Perfectly legal and very
sophisticated worl You think for a minute, that a talented
individual with criminal intent and this kind of skill couldn't
rewrite the firmware for a 'potted' scanner? Or build one from
scratch that would not
only receive the forbidden frequencies, and decrypt the incoming
data
stream?
Making it illegal is no deterrent to the determined. Murder
has been
illegal since the dawn of civilization. Anyone read the headlines
lately?
Bank robbery has been illegal since the beginning of the banking
industry.
Read your contract and be surprised.
Banning cell capable receivers is not going to do the job.
Hell,
banning all radios isn't going to do the job. Those determined to
listen
will not be deterred by laws, sanctions, punishments, or
restrictions.

>
> I want my phone calls to be private. So, let's encrypt and fix
> the problem!

No, if you want your phone calls to be private, then pick up a
land line. (For the time being we'll not address what's currently
being done to them that renders this whole discussion moot.)
Encryption is only "the Club" on the steering wheel of your Ferrari.
But it only takes 30 seconds to cut the
wheel, and remove that security device. Just as it only takes a few
seconds to decrypt the most secure cell call once you've got the
key. DSS, is no better once you've got the PN codes from the same
series device.
Get this and get it good: NOTHING IS SECURE. That's a reality.
And
Washington not withstanding, nothing will change that reality.

If you don't want your calls monitored, don't distribute them
by radio.

>

Sounds like CTIA wants us to have those little Volksradios from Germany
in the 1930's. Didn't we fight a war over that sort of stuff? WW2, for
instance? I thought we won that war?

Charles R.
Wasn't there at the time, but have a lot of friends who were.

Any radio that relies for selectivity strictly on DSP without use of decent filters in the earlier stages is a joke. The new "digital" design engineers can not understand that.
You fire up that digital wonder on 160 or 80 with strong adjacent signals and "DSP wonders" will choke with intermods. Color CRT is of no help here.
You keep bying them, they will keep making them (and I will keep modifying them).
In some band situations DSP type detection makes radio sound mushy and fuzzy as compared to decent analog detector and good filters.
For casual operating the crapy radios are fine, for serious DXing and contesting they suck. No wonder I get complaints that I am too wide (from the owner of overloaded DSP radio).
Them Drakes with good filters keep looking better and better :-)

Well, you asked: "Would anyone suggest multiple 2N3053's or another device capable of handling the power without producing so much heat?"

This means that you want a device with higher efficiency (more power transferred to the antenna and less heat) but this is difficult to achieve because you are maintaining the operation class that defines the efficiency (then more output power leads to more heat).
The transistor that can withstand higher power is just a bigger one. It is a real luck to get such a transistor with similar parameters (if you use the same external components it may work but likely with smaller performance than the maximum). The heat generated will be the same but that big transistor can work with higher temperatures.
So, I'd suggest you to maintain the same transistor and improve its cooling system, that is, increase the heatsink to eliminate the heat on the transistor itself, resulting in lower temperature.
About the final amplifier you have to see whether it is not being overexcited. In this case, it is probable that you cannot take much more power from it. But if it is only a matter of overheat too, use the same cooling improvement.

That was the nature of the xtal "syntesized" CBs -- they used a 6x4
matrix of xtals to come up with the 23 channels, plus 1 extra freq
that didn't correspond to one. But I digress..

> No matter what encryption system is
> used, no matter which mode, they are not going to be secure.

That's not true -- you are confusing encryption with scrambling.
A good encryption algorithm -- like the original DES in its day --
cannot be broken, even when all the internals of the mathematics
are known. The key, or brute force, is the only way to do it, and
usually brute force attacks require more time than the Universe
was around... Of course, DES was weakened and computers caught up
to it, but a DES encrypted call made 15 years ago was secure for
15 years -- that's good enough for me. See "Applied Cryptography"
for more info into this subject. But it isn't scrambling, which
takes no effort at all to break.

Hello All,

I have a Yaesu VX-5R Tri-Band HT (6m, 2m, 440MHz) for auction.
I am selling it so I can upgrade to a different radio.
It comes with:

Original VHF/UHF Rubber duck, plus 6m & HF rubber duck extension
Belt Clip
Hand Strap
FNB-58LI 7.2v 1100maH 5watt Lithium-Ion Rechargeable Battery
NC-72B AC Adapter for recharging the battery
EDC6 DC Power cord to run the HT off of external power source
BNC-to-SMA 50 Ohm Adapter: So you can use the HT with an external
antenna
Original Box
Also have original warranty card and circuit diagram

Please visit:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=296351188

Thank You & 73,

Mike KQ6MU

I don't know that you have allot of choice here. All of the Chinese tubes come from a single factory. RF Parts checks some of them out and if they don't fail their standard are labeled RFP and are given a 2 year warranty. All the other Chinese tubes may or may not be of similar quality. Amperex is made in France and is a good tube but requires more drive to achieve the same output. There are no Russian 3-500zg tubes made. The equipment for the Eimac was sold to a Pennsylvania company by the name of Triton. They sell a limited number of tubes through a Georgia retailer. RFP sells a generic tube itentical to their RFP brand for a little less and with a very limited warranty.

2265. Wanted: Info on FT-470 - Scan Resume

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-02 00:00:00 UTC
From: nw7us@hfradio.removethispart.org
Message-ID: <D_LF4.71104$AT6.77981@dfw-read.news.verio.net>
Source record: 82309
Cross-posted to: alt.ham-radio.fm,alt.ham-radio.mods,alt.ham-radio.vhf-uhf,rec.radio.amateur.misc,rec.radio.amateur.equipment

I recently obtained a used FT-470 - I am trying to find out how to set the memory scan so that it will stay on an active memory while scanning.

Right now, when memory scanning, if it stops on a memory, it will listen for a few seconds, then resume scanning. I would like it to stay there until the frequency becomes quite again. Then resume. The FT-411E does this. How do I get the 470 to do this?

Also, what is the ALT for?

Thanks,

73 de NW7US

(Please modify my email address when replying. Remove the remove part.)

Try to get the Sams Photofacts for this rig and follow the allignment
procedures. This will help you better than anyone can explain.
Try the Local Library for the Photofacts and if they have them, get
them copied. Your library should have a copy machine.

If they dont have it for the Adams, Try the Madison. They use the same
main board and allignment procedures are all the same.

2267. Ten-Tec Equipment for Sale

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-02 00:00:00 UTC
From: randas@mindspring.com
Message-ID: <8c85m7$27m$1@slb2.atl.mindspring.net>
Source record: 82311

I have for sale the following equipment. All in fine working order, and can be heard on the air. Would prefer to have local pickup (near Louisville,KY) but will ship in factory boxes if needed.

Omni-VI plus (factory upgraded to option 3)
All filter slots full Standard 2.4kc filter
#288..1.8kc SSB filter 6.3 IF
#285..500hz CW filter 6.3 IF
#282..250hz CW filter 6.3 IF
#218..1.8kc SSB filter 9mhz IF
#217..500hz CW filter 9mhz IF

Radio is in near mint condition..I'd say a 9.85 on the 10 scale. (10 being "perfect")

Included with the radio is a near mint 961 power supply/speaker , all power cables, manuals, and factory boxes.

Price for Omni-VI plus and power supply... $2,150 and some help on shipping if needed.

Have a "mint" 238 tuner..includes the factory supplied 1000pf 500V capacitor for added help on 160m if needed. Have manual and factory boxes.
Price for tuner is ..$300 plus help on shipping. (The buyer of the Omni-VI will have first chance at this tuner)

I will entertain offers...but please make them reasonable.

de Tim K0FL

You dont need to operate IT in a contest or where ever. All one has to do
is look at the design, that will tell a lot. I agree with K3BU.

I had a lot more to say about the PRO but I will keep my thoughts for now
to myself.

No, I'm speaking of encryption.

> A good encryption algorithm -- like the original DES in its day --
> cannot be broken, even when all the internals of the mathematics
> are known. The key, or brute force, is the only way to do it, and
> usually brute force attacks require more time than the Universe
> was around... Of course, DES was weakened and computers caught up
> to it, but a DES encrypted call made 15 years ago was secure for
> 15 years -- that's good enough for me.

Thank you for making my point for me. Any encryption system
requires a key. Those keys are known. And the truly determined will
not be stopped by
mere laws. DES was caught up to with contemporary computer
technology. The truly determined won't wait. And the more people
that know the key, the greater danger that it will find its way into
the hands of those that these blanket laws seek to address.

Security is becoming an issue on a number of fronts. And hackers
have been demonstrating for months now, that supposedly secure
systems are anything but on the internet. Digital encryption of
communications are no different. And the very idea that a system may
be made private and secure is contrary to the evidence before our
eyes in the newpaper everyday.

Further, there are new laws requiring the 'authorities' whomever
they may be,to be allowed access to all such encrypted
communications technologies as a condition of license. CALEA is an
example of such. Now you have the government and its agents all
involved in the inteception of communications, supposedly by court
order, but that's a irrelvant matter. The fact that so many
individuals have access to the technology to decrypt, is in and of
itself a security risk. Get one determined individual to lay hands
on such technology, and it's all over the Internet before you know
it's been cracked.
You dont' have a 15 year window anymore. Once the algorithms are
in use, they are stealable. And there are whole groups of people who
do nothing but steal security algorithms.

Here in Chicago, there was a major controversy over something as simple as a person's name encrypted onto their ATM card so the terminal could address them in a more personal fashion. A firestorm of protests followed, and was punctuated by the lone voice of a computer hacker interviewed on the news. He said simply, "for every piece of data out there, there is at least one person who will use it against you."
He went on to say that the whole digital age has made things so much easier for the hacker because all you have to do is steal a key and you can get into anything. He was very emphatic on that point. Computing power is today where only science fiction imagined it 5 years ago. And hacking is becoming a major industry, with new and more poweful tools, and staggeringly creative minds at work. The circles of hackers are not only wide and deep, but they're above ground. They hold conventions for crying out loud. If you honestly believe that there is a system out there that is so secure that it cannot be cracked, they you underestimate both power of determination, and the disregard for the law that's out there in the population.

> See "Applied Cryptography"
> for more info into this subject. But it isn't scrambling, which
> takes no effort at all to break.

I understand this point. One of the reasons that encryption systems are so attractive is that they require skill and effort. It's like the quest for the holy grail.
And systems are broken every day. Newer ones. With far less of a security window than 15 years.

The more people that get into the loop, the greater the risk of security breach, and these new laws are almost self defeating. One cracks down on the legal hobbyist, while another mandates access by thousands of individuals to the very technology created to ensure security.

Again, the point is relevant: if you want to make your communications secure, then don't distribute them by radio.
>
>
> > >
> > > > That's my opinion; doubtless there are others.

Good point. Sorry for teh confusion.

2270. TS-440S Question

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-02 00:00:00 UTC
From: Keith Diehl <Address@BottomOf.Page>
Message-ID: <1l9fesk63vi1jfh96v0663paqnedb151vk@4ax.com>
Source record: 82314

I've just aquired a Kenwood TS-440S that has been "modified for marine use". That is, the transmitter is will operate on any frequency, not just the
ham bands.

Also, the manual states that the frequency tuning rate should increase with faster dial turning - for faster QSY. This feature isn't working.

I'd like to un-do the marine mod but I don't know what it consisted of, and I'm wondering if the "marine mod" could have any effect on the tuning.

Can anyone help? Thanks.

Need a STATION?
Entire station For sale: (Sorry, will not split-up).

Kenwood TS-180S w/DFC solid-state digital HF transceiver. Covers 160-10 Meters (no WARC). Radio has 4 tunable memories. Has 2nd SSB filter installed for really good selectitivity.100 watts out SBB+CW. Includes photocopy manual, Kenwood hand mike and DC power cable. Works great. It is older Kenwood gear and has original paint with some scratches, but lettering on front panel is perfect.

Kenwood VFO-180 external VFO. Matches above radio. Includes connecting cable. Works great. In same cosmetic condition as the radio. Pretty hard to find.

Kenwood SP-180 external speaker. Also matches the radio. Includes 3 passive audio filters.
Works great, in same condition as the other 2 pieces. Has built-in homebrew HamComm RTTY/CW interface with cable and 9-pin RS-232 (com port) connector. Works very well.

Samlex SEC-1223 power supply. Small lightweight 23 ampere switching power supply to power the Kenwood gear. Works great. Includes manual and box. Excellent condition.

Shure 526T pre-amplified desk mike. Works great, excellent condition, wired for the Kenwood. Awesome mike.

MFJ-941E Antenna tuner. Late model, dark brown, matches Kenwood very nicely. In very good condition.

ALL for $600. plus shipping. US Postal money order only.

Thanks..... Mark W4UDX

Me thinks maybe you aren't too happy with your 756Pro???????? Isn't it funny how well we got along for 40+ years without it.....

My Alinco DX70T does everything I need it to and with a lot less space consumed.....for about 6DB less $$$$$$$$$!

Pat

Gentlemen,

Such confusion. Good encryption is within reach of all. It is hard to use. It is tedious to manage. But it is available. PLEASE don't mistake the algorithm for the system - they are entirely different. Algorithms are best when publically tested - please visit the Right Honorable Bruce Schneier's web site at www.counterpane.com.
Private Keys are NOT known, fair sirs. Only PUBLIC ones....
Oh, please do educate yourselves before you fall, writhing in confusion, into that black mass of public ignorance from which we all have crawled.....

And secured. And never, ever transmitted over the air. The
association between a key and the phone's ID should not be able
to be derived without access to the account info, in which case
you screwed no matter what.

> And the truly determined will
> not be stopped by

That's true, but it has to be an inside job, as opposed to the
equivalent of running naked through the streets.

> Security is becoming an issue on a number of fronts. And hackers
> have been demonstrating for months now, that supposedly secure
> systems are anything but on the internet.

Different issue. Unix was never designed to be secure; sendmail has
always been a disaster waiting to happen. While they both do their
job adaquately, a poorly config'd sendmail script, a bad .forward
file, or a program installed with SETUID or SETGID set that shouldn't
have it set, or read access to /dev/kmem, and it's all over... The
current password algorithms, on the other hand, are very good. But

the trapdoor algorithm doesn't help here. (As an aside, I've always found it interesting the the pre-eminint expert on Unix security is also the editor of The Unix Hater's Handbook... :-))

> Digital encryption of
> communications are no different.

Yes they are. Different hardware, different results, different weaknesses. Unix's weakness is its original security model, which was designed for openness, not restrictiveness. Cellular radio's weakness is the radio link itself.

> Further, there are new laws requiring the 'authorities' whomever
> they may be,to be allowed access to all such encrypted
> communications technologies as a condition of license. CALEA is an
> example of such.

CALEA is unconstitutional. However, we need someone to challenge it, and that won't happen until a Bill Gates or other tycoon finds hauled into court with warrantless "evidence."

If the gov't wants to listen, they could always tap at the central office. The fact that the last link is by radio changes none of that.

> The fact that so many
> individuals have access to the technology to decrypt, is in and of
> itself a security risk. Get one determined individual to lay hands
> on such technology, and it's all over the Internet before you know
> it's been cracked.

But it's all brute force and you don't have the time.

> You dont' have a 15 year window anymore. Once the algorithms are
> in use, they are stealable.

So what? A good encrytion algorithm, almost by definition, has its entire structure and method known. If it has a weakness, it'll be broken, but that's not a good algorithm. There are good algorithms under attack in massively parallel systems now that aren't yeilding. THOSE are the ones you want. The key stays in the phone and in the accounts database, and anyone who can get to the accounts database can get to your conversation easily enough using other methods. You trust -- to a limited extent -- the twisted pair outside your house to carry your calls with relative security, right? All that encrypting the call would do is move the weakest link in the chain from the radio link to the wire/fiber network. I can live with that...

> And there are whole groups of people who
> do nothing but steal security algorithms.

Irrelevent. Security by obscurity is a disaster waiting to happen. Any "security expert" who thinks otherwise is full of shit. The security should be just as good if all the details but the keys are

known.

> Here in Chicago, there was a major controversy over something as
> simple as a person's name encrypted onto their ATM card so the
> terminal could address them in a more personal fashion.

"encrypted" using what as a key? Sounds like scrambling or just
plain recording it to me. Your PIN is on your card in purely
readable form.

> He went on to say that the whole digital age has made things so
> much easier for the hacker because all you have to do is steal a key

Yes, so you protect the key.

> and you can get into anything. He was very emphatic on that point.
> Computing power is today where only science fiction imagined it 5
> years ago.

That's not true -- Moore's law has been accurately predicting computer
growth since the 60's. No one wanted to believe it would continue
unabated, though....

> > See "Applied Cryptography"
> > for more info into this subject. But it isn't scrambling, which

Weak ones, that should never be deployed. I reiterate my points and
stand by my earlier positions, AND re-recommend that book.

I can keep the difference between an encryption algorithm and a key
straight. :-)

I don't know if you were suggesting the use of public/private key
systems, a'la RSA for cell phones, but I think that's a good use for
them... although, some interesting ideas are coming to mind.... but
I was thinking of a symmetrical, single key system.

Thanks for your contribution to the mudfest! :-)

>
>Thanks,
>Van W0NZV
>
>

I have not used 756PRO (I saw it, pretty picture tube!) but I have used TS870
(it's designer defected to Icom to work on 756PRO?)
When 870 came out and its designers staged promo event at Dayton, I pointed out
that relying on DSP to provide selectivity is a no-no. When I got my 870 and
used in the contest on 160m, I almost threw it in the garbage, it choked on
strong signals. Kenwood then issued gain distribution mod, which improved
things marginally.
When I got service manual, looked at the circuit and installed InRad 2.1 kHz
filters in place of garbage ceramic and stock Kenwood filters, the radio is a
completely different animal (much better). See the 870 mods at:
http://members.aol.com/ve3bmv/
Untill designers come up with non-overload RF and IF circuits (no one has yet),
DSP "filtering" without decent IF filters is a fiction. Put it next to Drake
R4C with Inrad or Fox-Tango filters and you will see!

They neither have to be transmitted, nor to they have to be linked
to the phones ID. They simply have to be known. What can be known
can be stolen, or distributed.

My point is not that it has to be simple or publicly available,
but that it exists. Never underestimate the power of determination.
>

Nice dodge...but this conversation isn't about Unix. It's about
the ability of the determined to crack encryption. Different
technology is irrelevant. Different results irrelevant. Different
weaknesses, not relevant. There are weaknesses. They can be
exploited.

> Unix's weakness is its original security model, which
> was designed for openness, not restrictiveness. Cellular radio's
> weakness is the radio link itself.

And anything on it is accessible through it's wide distribution.
Encryption
is only a mask. The information needed to see through the mask
exists. It is therefore retrievable. It doesnt' have to be
convenient, it doesn't have to be easy, it just has to exist. Never
underestimate the power of determination.
>

> hauled into court with warrantless "evidence."

The constitutionality of CALEA is irrelevant. It exists, it will
be used.
>
> If the gov't wants to listen, they could always tap at the central
> office. The fact that the last link is by radio changes none of that.

Which was the contention of CALEA opponents. However there are
cellular and PCS devices that now speak to each other without going
through the land based network. These would be more specifically
addressed by CALEA.
>

Don't be so sure. Saying that no one has the time to accomplish
something verily insures that someone will find a more efficient
way.

Only to the extent that it is not widely distributed to any and
all.

> All that
> encrypting the call would do is move the weakest link in the chain

> known.

No it's NOT irrelevant...it's exactly what we're talking about.
Security by encryption IS obscurity. And the keys are aquirable.
Again, never underestimate the power of determination. What is known
by one can be stolen by another. And with more agencies being
brought into the loop, more people will have access to the keys. If
the key remains in the user's phone, then it's stealable at any
moment.
>

>
Nice try..but you conveniently neglected to include the point. I
wasn't talking about the technology, or the PIN number. A
diversionary tactic that indicates you really don't want to hear
what's being said. Only what's convenient for you to address.

The point was not that you name would appear on the screen, or
that it was on the card, or that the PIN number was also on the
card. Nor was it about how the data was contained on the card. It
was about how information that is known can be stolen.

> > He went on to say that the whole digital age has made things so
> > much easier for the hacker because all you have to do is steal a key
>
> Yes, so you protect the key.

Which is again the very point. No protection schemes are fool
proof. What exists can be stolen. Make no mistake. That which exists
CAN be stolen. And it's a lot easier than you think. Because it
depends on people. No rules, no laws, no mechanisms, no technology
can prevent people from taking stupid actions, careless actions,
thoughtless actions or irresponsible actions. No law, no mechanism,
no technology, can prevent those that are determined from doing so,
from invading the 'security' within which a key may lie.
Never underestimate the power of determination. And never
overestimate the commitment of those keeping watch.

Not only the weak. There isn't a system been devised by man that
can't be compromised.

If you don't want your conversations to be intercepted, don't
distribute them by radio.

Bill,

I know of another one with a broken plastic foot. Seems they only cost about $4 each from RLDrake. Then there's a packing fee plus S&H. ? $10 for one or $15 for two. HOWEVER, (and don't hold Drake to these round numbers) for about $35 + $5 + $5 (about $45) you can get a whole replacement bottom panel (4 screws to install) that has the metal "bail" to replace the feet. If one were going to keep that radio for some time it may pay to just replace the bottom for one with the bail -- similar to the Ten Tec Scout bail.

Seems like a never ending quest.

I'm looking for the following Drake C-line gear, must be good to
excellent condition, fully operational (if otherwise, please state
what's up).

MS-4 Speaker
T4X-C Transmitter
500 and 250 Hz 2nd IF filters for R4C

I would also be interested in an R4C, as long as it has 5 filter
positions (not 4).

Please call toll free at (800) 962-2949, or email to
NeilR@innermedia.com

Thanks, and best 73's.

Neil, N1DMA

I have owned and operated all the so called modern DSP rigs which included the 775, MP, 870. I do not expect the PRO to be any better and with the 15 kc bandpass the blocking dynamic range to be poor compaired to the rest and yes, even inferior to the 870.

What did suprise me about the PRO was the MDS which was measured at -124db considerably worse than the 775 or FT1000 or even the plain 756 and 870!! check for yourself: http://www.plicht.de/ekki/756pro/

As you can see the blocking dynamic range is at 105 db which again is way below the FT1000 which when tested was greater than 154 db and if you can, check ARRL website for the facts about the 775 and the rest of the radios I have mentioned.

Being the "best all around" does not impress me at all, it has to do better than that.

The facts are all there, all you have to do is read them.

I think that the only way to solve this is to hammer the fact In to our congressmen's head that Dr. Armstrong doomed them to failure back in the 1930's when he came up with the superhet receiver.

2289. Suggestions for HF gear?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-02 00:00:00 UTC
From: Charles Fregeau <n5hsr@sprynet.com>
Message-ID: <38E7F23E.D7BEE950@sprynet.com>
Source record: 82333

I'm just getting back into the HF scene. Unfortunately, where I live, I can't have a tower, I'll probably end up with a multiband dipole, or an Isotron.

What I was wanting to know is what is a good recommendation for a station setup? The last 'new' ham station I saw on HF was a Kenwood TS-440SAT back in the mid-'80's running 300 baud HF packet on an ATARI.

Things I ultimately want to be able to do with my station:

1. Phone. Not contesting, just rag chewing, mostly.
2. Packet.
3. Satellite work on the HF birds eventually.
4. Listening. I still do SWL, that's what led me into hamming in 1985 in the first place.

Don't want to do over 100 watts due to that Bulletin 65 stuff. Living in an apartment is a pain.

Peter Maus <PeterMaus@worldnet.att.net> wrote:

>
> Interesting editing, Eric. But you failed to address key points.

Two points...
1) thank you for fixing your headers so that alt.radio.scanner sees
these
and 2) please avoid ad-hominem attacks. They dodge the point.

> They neither have to be transmitted, nor to they have to be linked
> to the phones ID. They simply have to be known. What can be known
> can be stolen, or distributed.

But the radio is no longer the weak link. The goal is to keep radio
from being the weak link... the weak link becomes the physical
security of the cellular accounting database. Once the weak link is
no longer the radio link itself, the CTIA argument collapses and
we can stop going through this annual circus.

> My point is not that it has to be simple or publicly available,
> but that it exists. Never underestimate the power of determination.

But the weak link isn't that radio is used but that the key exists.

> Nice dodge...but this conversation isn't about Unix. It's about
> the ability of the determined to crack encryption. Different
> technology is irrelevant. Different results irrelevant. Different
> weaknesses, not relevant. There are weaknesses. They can be
> exploited.

But the daily successful hacks on Unix have nothing to do with
"cracking encryption" but with other problems. The encryption
is not the weak link.

Your whole argument seems to be that encrypion can be broken
therefore the radio signal is open to all, encryption or no.
I'm saying that it isn't so.

> And anything on it is accessible through it's wide distribution.
> Encryption
> is only a mask. The information needed to see through the mask
> exists. It is therefore retrievable. It doesnt' have to be
> convenient, it doesn't have to be easy, it just has to exist. Never
> underestimate the power of determination.

But it isn't retrievable by radio but by other methods. Therefore
radio is no longer the weak link. Therefore the yearly CTIA circus
dies a quiet death.

> > > And there are whole groups of people who
> > > do nothing but steal security algorithms.

> > known.
>
> No it's NOT irrelevant...it's exactly what we're talking about.
> Security by encryption IS obscurity.

It most certainly, emphatically, absolutely is **NOT**!

Scrambling, voice inversion, SS all qualify as security by obscurity.
Once the method is known, the rest falls out easily. And usually the
method can be figured out. Jake Brodsky wrote an article on how to
use lab equipment to retrieve an arbitrary SS signal, for example.

Encryption is complex polynomial mathemeatics that given a key and
an input data stream, produce an output data stream. The relationship
cannot be derived from the data; nor can the clear text. This does
assume that the encryption algorithm is any good -- there are lots of
people who think they know how to write encryption algorithms and they
have glaring weaknesses, but I'm skipping those and talking about the
real thing -- good encryption.

> And the keys are aquirable.

But not by radio, which makes radio no longer the weak link, yadda
yadda yadda...

> Again, never underestimate the power of determination. What is known
> by one can be stolen by another. And with more agencies being
> brought into the loop, more people will have access to the keys. If
> the key remains in the user's phone, then it's stealable at any
> moment.

And if your phone is stolen and miraculously recovered? My
inclination is to reset it and clear the key and ask for it to
reprogrammed. Your carrier will already have the DSN on file
they'll know it's yours... a good implementation (yeah, yeah, I know)
of the setup system wouldn't give access to the display of the key;
rather it would generate a new key and give it to the salesweenie to
enter into the phone. Part of the user manual that comes with a phone
would have a "WHAT TO DO IF YOUR PHONE IS STOLEN" section, just like
phones used to say "YOU CAN BE OVERHEARD".

Sorry, I'm skipping the rest of your message because the point of
your argument seems to be just to argue, just as you accuse me of
doing.

My point, about 10 messages back in this thread, is:
1) CTIA is trying again to get at congress to screw up radio
2) They are doing it in "the name of the people"
3) An encryption system will do far more for protecting "the people" than their harebrained legislation
4) Encryption does and will work. Scrambling won't
5) CTIA's members have it in their power to really solve this issue, once and for all, but won't, so...
6) We have to again write letters to congress to educate them about who we are and what we do, AND propose an alternative to what the CTIA wants,
7) and we should put our best foot forward in this newsgroup to keep what we say from getting used against us by some congress-critter with a fat war chest courtesty of CTIA.

If we don't,
1) Scannists can kiss scanners goodbye,
2) SKYWARN volunteers will find themselves seriously impaired
3) ditto for ARES/RACES
4) the "alignment" will become a thing of the past because
5) rigs above 30 MHz will become black resin boxes
6) HAMS can kiss all their packet, digital and data modes above 1200bps goodbye.

Now, you can fight with me, or write a courteous letter to your Senators, since this time they're trying the Senate first. Your choice.

Eric

P. S. I'd be interested in hearing from someone with knowledge of key escrow systems and how they could be made secure... I think Peter's point of the key database being stolen is valid, but not necessarily relevent to our argument. But how would you best protect a set of keys? A couple of message back in this thread I thought of a 2 pair public/private key system that would make it impossible to retrieve the whole conversation without stealing the phone (thanks, grendal!) but I'm not a crypto expert. e)

I think the "mod" was just a wire or resister etc, that was clipped. Should be in the manual. Myself, I wouldn't worry about it. But I have no overwhelming urge to talk on an illegal freq. In fact, but I'm not sure, but that may need to be clipped in order for the warc bands to operate. Some of the older rigs did. I've never heard of the term "marine mod" and in fact the use of the TS 440 on a marine freq would be illegal as the rig is not type accepted. The mod was more generally used for MARS etc. Totally legal...It's only illegal if you use it where you shouldn't. Most eveyone seems to clip those for one reason or another. Should have no effect on the operation of the rig whatsoever, except for the extended transmit. Of course in the past, many CB'ers cut these to have "amateur" grade cb's...Totally illegal of course. Again not type accepted. MK

I owe Tom (radioguy) an apology. My son changed the identity in my EMAIL client to an address I use only as a backup, and the return address when I answered this offer was for that account. I sent myself a test message, and when it arrived it was clear why I thought I wasn't receiving answers to some of the messages I sent. When I checked the other account it had 39 messages waiting for an answer.

(sheepish grin)

Source record: 82339

I have old azden pcs-4000 and the key pad has become non functional on all but a few keys..I disassembled it and it basically has conductive rubber pads contacting the p.c tracings for the key press..I tried thoroughly cleaning the rubber and traces with denatured alcohol with no change..I tried gluing small pieces of aluminum foil which worked okay until the glue didn't hold (I tried super glue and elmers glue, both didn't hold) and I was worried that the metal-on-metal contact would break the p.c. tracings...does any knowledgable ham know if new key pad can be found for that old rig or possibly a conductive rubber overlay can be used?..I like the rig and have had it for over 15 years....thanks!

Chuck,

I've bought a 742 new about 3years ago with the 1.2ghz module which I use as a base vhf/uhf radio. I've never had it mobile, but the radio has been no trouble and works fine. I installed the 1.2 unit myself without problems. I believe the TSU-7 is for tone squelch (I bought and installed it, but I rarely have the need to use it). One short coming is the lack of an alphanumeric display (you can't use letters to remember where your memory locations are set).

Good luck!

Mark

Date: 2000-04-02 00:00:00 UTC
From: "K. Miller" <kmilr@uslink.net>
Message-ID: <38E6E056.D80754EC@uslink.net>
Source record: 82435

A measurement from my Autek QF1-A filter chassis to ground shows approximately 56 VAC (unit plugged in and turned off). In examining the schematic, I noticed that both sides of the AC line are bypassed to chassis (floating) ground with .01 ufd 1kv caps. I believe both of those caps are leaking as I get the same measurement from chassis to ground when I reverse the plug in the outlet. I'd like to replace the current floating ground setup with a polarized input (for obvious reasons). I would appreciate information from anyone who has had a similar problem (and corrected it) or has an idea as to whether or not polarizing the unit might cause problems. Thanks, Keith (AG0H)

It was one of the first biggies that had general coverage receive.I
wanted one really bad for a long time.I was close to buying two of
them,the first was a rough one that worked pretty well,but had a big
scratch on the display area from something hitting it.The second was
really clean,but time has kind of passed the FT1 by,it's got a lot of
digital hash,and the receiver from the hash and phase noise,isn't that
great,but it's not a bad rig,and it sure looks impressive!If you got it
for a good price,it's great,if you paid more than say $700 or
so,well....

If you do not have a 3 wire plug with the ground connected, which I doubt, and you are just using a digital meter (or a meter with a very high resistance) what you are seeing could be normal. The caps will pass some of the AC at very low current. The 56 volts seem to indicate the voltage is devding evenly like both caps are ok. I forget the value of a resistor but think it is either 1000 or 7500 ohms that you need. The object is to make sure there is less than 1 ma of leakage to ground. That is about the point you start to feel the effects of electricity on the outer skin.

Charles,

A few questions come to mind:

New or used ?

Is room in the apartment an issue ?

On a budget or sky's the limit (don't we all wish) ?

A few recommendations:

There are some very nice DC - light radios, Yaesu and Icom both
come to mind as people to look at.

Take a look into PSK-31 it's a data mode that seems to be made to
order for your situation. People have done DXCC in 3 months with
less than you are likely to put up.

Check out www.sgc.com for their auto antenna tuners. In the power
range you are talking about they work very well. This may let you use
a fairly large wire antenna without being to obvious about it.

The Drake R8B is a very nice SWL radio, but most ham rigs will do
a pretty good job on SWL as well. Having a second receiver might
be a help doing satellite stuff with a radio that does not cross band very
well ....

It might not hurt to see if you can beg your way into a local ham's shack
simply to see what's out there today. I can pretty well say that things
have changed quite a bit since 1985. For example VHF packet is one
thing that is not what it once was.

See if you can get to a dealer and try out a couple of new radios. Many of
them are TINY this turns on some and turns off others. A Yaesu FT-847 is
a LOT smaller than an ICOM IC775DSP but you would have a hard time
telling that from the glossy adds in QST.

Hope this helps.

Bob

Ok I'm seeing the crux of our conflict here. You're arguing
technology, and I'm not. My point is that the problem is with human
determination, not technology.

> My point, about 10 messages back in this thread, is:
> 1) CTIA is trying again to get at congress to screw up radio

Agreed.

> 2) They are doing it in "the name of the people"

With conditions, agreed.

> 3) An encryption system will do far more for protecting "the
> people" than their harebrained legislation

Agreed. However it will not solve the problem.

> 4) Encryption does and will work. Scrambling won't

Scrambling will not, agreed. Encryption can be defeated.

> 5) CTIA's members have it in their power to really solve this
> issue, once and for all, but won't,

Agreed, but by different methodology. My point is for CTIA to
simply admit that these are radio transmitters and that there
best
efforts may not be enough, so users should refrain from
discussing
sensitive material via this medium.

>so...
> 6) We have to again write letters to congress to educate them
> about who we are and what we do, AND propose an alternative
> to what the CTIA wants,

Agreed.

> 7) and we should put our best foot forward in this newsgroup to
> keep what we say from getting used against us by some congress-
> critter with a fat war chest courtesty of CTIA.

Should and will are two different things, as evidenced that
there
are those here who STILL express open intent to conduct
illegal activities re: cell mods and their like and their
kind.

Should; agreed. Will; won't happen. Never underestimate the
power of
deterimination.
>
> If we don't,
> 1) Scannists can kiss scanners goodbye,
> 2) SKYWARN volunteers will find themselves seriously impaired

> 5) rigs above 30 MHz will become black resin boxes
> 6) HAMS can kiss all their packet, digital and data modes above
> 1200bps goodbye.
>
All agreed.

> Now, you can fight with me, or write a courteous letter to your
> Senators, since this time they're trying the Senate first. Your
> choice.

My letters have already gone out. However, there is no one on the
Senate floor to take the place of Mr Goldwater, who had a deep
commitment to protect radio hobbiests interests.
Further...discussions tend, like this argument, to dwell on
technology and not on human activities.
And NO one not even the Republicans in teh Senate, for all their
blather about responsibility, will tell the CTIA to start telling
the truth to their customers.

Hope is thin, my friend.

Since they are marked as containing radioactive material, I called EG&G and asked what I should do with them. I was told that they would not take them back, and I could do whatever I wanted to with them, EXCEPT discard them...

As I understand, these are rather expensive items. I'm goind to just put them on ebay with a low initial price and no reserve, as I'm sure there are lots of laser experimenters that could use cheap replacements for their arc lamp power supplies.

I'm *not* going to put radioactive material into the waste stream that is going to the county incinerator!

2324. Help: Kenwood TM621 & 631

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-03 00:00:00 UTC
From: Raymond Hutchinson <rdhutch@earthlink.net>
Message-ID: <38E82BC0.173F@earthlink.net>
Source record: 82348

Please help, if you have any info about which "pots" in the Kenwood TM 621 and TM 631 radios (2M-220 dual band) adjust the mic gain and deviation. I recently purchased a TM 631 that has a very "hot" mic, that sounds distorted, and is likely causing over deviation as well. I need to turn it down but the manual has no schematic and the variable resistors are only idnetifird as "VR 1", etc, on the pc boards.

Thanks for your help,

Ray, AE6H

Source record: 82349

Kenwood TS-830S gold in 9+ condition. This is an extremely nice rig -- full output, super receiver. Covers 160 -- 10, including WARC bands. Has dual SSB and CW filters for Variable Bandwidth Tuning in both SSB and CW. True RF speech processor. Passband Tuning. RF notch filter. Unbelievable receive audio. Whether contesting or just rag chewing -- this is one super rig. Have both operating and service manuals. Why am I selling? Just don't do HF anymore -- don't even have an antenna.

$425.00 plus UPS from 83861

I am thinking of buying a TS-440 HF rig. I have heard that this rig suffers some kind of problem were the material used to pot the VCO attacks the parts and causes problems. Does this problem happen in all TS-440's or just certain serial numbers?

2328. Help - Need Opinions Please

I am considering a Kenwood TS50s which can be bought for $700 brand new. That seems like a lot of radio for the money. Are there other radios that would be at a comparable price? I will not be using it mobile only as a base. TIA!

You can usually find a Yaesu FT-900 for about the same price which is
a much better radio for a small base radio, IMO.

If I remember correctly, spacing is dependent on the model's product code, found on the rear of the radio, under the belt clip. You'll need the appropriate service manual to read it. Why don't you just take them to a local commercial radio shop???

Determining which 440's had the problem is difficult. The safest approach is to purchase one that has already had the PLL board repaired. It is possible that at this point in time those that have the problem would already have gone south.

I have had six of them at one time or another and think they are a great radio. Good luck whatever you do.

Gentlemen:

I have been in Thomas.Loc.gov and looked up the changes to the law. The Changes are S 2326. Senator Burns and Senator Wyden are very gullible. These guys aren't thinking correctly. They have modified with the word "intentional" a few of the passages to read "intentional interception" and not bothered to really read it for fallout.

Ladies and Gentlemen, I submit that we "intentionally intercept" when we build or modify a box to do just that. When we are tuning around the freqs we are trying to intentionally intercept those communications. Usually, any time we do this it is for entertainment purposes. It doesn't step on anyone's toes UNLESS SOMEONE TALKS about it. We do this on a casual basis, I.E. not everyday, or for harm or money. But we can not let the law be changed to be more specific in that it will cut off all those fun things and it will not define those fun things again.

The changes reflect no such "casual use" and therefore in my mind, if you have to have one type of intention, you have to define the other more casual one. This reminds me of HR514 that Rep Tauzin of Louisiana tried to pass, but from the Senate side. It still comes out to be the same old. The changes do rely on Chapter 118/119 of the Communications Act of 1934 for definitions of purpose. The text specifically outlining casual use such as Ham Radio, Ship to Shore and such will be stricken from the 47 CFR 18 USC Sec 605 with the proposed changes.

Senate Bill 2326 has not made it into the database. S 2326 is the changes to the 47 CFR 605 Section 750. The text is available though. See if this URL works for you:
http://thomas.loc.gov/cgi-bin/query/D?r106:1:./temp/~r106Mczgc7:e253211:

Write your Represenatives and Senators ladies and gentlemen, as the legacy of Newt Gingrich tries to rear it's head once more.

Source record: 82361

Hello all,

Over the weekend I bought a TS430S, and it's got a couple little problems. The first and formost one is that the STEP switch is not functioning. The display will only move in 100hz increments regardless of the 'step' switch position. The LED indicator is dimly lit in the OUT (off) position, and bright in the IN (on) position. I'm thinking switching diode or?? I have the service manual, and have traced the switching circuit, but loose it when it goes to IC-4 on the control unit.

The second problem is a worn AF pot (no surprise). Does anyone know if these are available from Kenwood, or should I just give it a shot of contact cleaner? Is it OK to use contact cleaner on these pots?

The last 'problem' is the case is painted a UGLY brown. This one I think I can fix with a little sandpaper and a little GM Medium Gray Metallic DupliColor.

They call that "Pause" mode.
To set the scan resume mode, press F/M and then STEP (7). a small "P" or "5"
in the shaded box at the upper left indicates the current mode.
Press F/M to change it, or just press STEP (7) alone to return to the
frequency display.
5 = 5 second delay then resume scan
P = pause till signal is not present.

Along with some other equipment I acquired what I believe to be a
1950s, early 1960s TR switch.

I recognize the power supply it's attached to as a modified AMECO
unit. I can't remember the details of the unit in the foreground of
this picture which I believe is a TR switch. I also seem to remember
it being late 1950s to early 1960s vintage.

Take a look at:
http://www.geocities.com/k6sde/TR_Switch/TR_switch.jpg

Anybody with a better memory than mine?

Who made it? (Johnson???)
What does it do? ("isolate" the receiver from the antenna??? or??)
How does it fasten into the antenna system?

I probably won't ever use it but would like to know more about it
before I make that decision. If I know the years when it was sold I
can go to the library and try to find an ad or article in and old QST
about it.

2352. FS: ICOM-751a

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-03 00:00:00 UTC
From: rhermanNOSPAM@gsinet.net
Message-ID: <%z8G4.3013$U62.48416@eagle.america.net>
Source record: 82376

ICOM-751a with internal power supply, UX-14 CI-V serial computer interface and 250HZ CW filter. Only modification is that the memory/battery board has been replaced by a unit from Willco Electronics that places all critial radio parameters in permanent ROM memory and the user programmable stuff in battery backed RAM. Also increases memories from 32 to 32 banks of 32 (i.e. 1024) but requires wiring modification to access the additional memories. This wiring modification has not been done. This replacement board overcomes the dreaded DEAD RADIO problem when the battery runs out which requires factory reprogramming.

The radio comes with original Mic (never used) and most of the nuts and bolts that were never used.

Problem: VCO3 which affects 15 and 17 meters tends to get out of adjustment resulting in raspy audio both on transmit and receive. It's an easy adjustment to make requiring only a voltmeter, but apparently doesn't hold for long. The factory recommendation is to replace the original plastic trimmer caps with new and better units. There are four VCOs and four trimmers. The circuit is surrounded by a shield soldered to the board. I have the parts but not the will or time to attempt the repair. ICOM's charge for the repair is estimated to be about $200. I've found two possible places in the greater Concord NH area that estimate the cost to be more like $100.

If I have to get the repairs made, I will be looking for $700. If you want to try it, I'll let the 751a go for $550 with the replacement parts and service manual.

I'm the original owner of this radio and am not aware of any other problems.

I would prefer a sale in the New England area as I don't want to deal with shippingthis unit.. It is rather heavy with the internal power supply and I'd like to makesure it arrives safely.

TenTec Scout with all band modules and noise blanker option. Has had a switch added on the rear to switch to QRP easily. Complete with mic, mobile mounting bracket and manual. $450 plus $10 for shipping to US address. Bank teller's check or money order.

Remove "NOSPAM" from address before replying.

2355. FT-890 YAESU 12v power supply question

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-03 00:00:00 UTC
From: tubecntral@aol.com
Message-ID: <20000403181039.14364.00001731@ng-md1.aol.com>
Source record: 82379

Hello, in the (hopefully near) future, I plan to use the equipment I inherited
to it's full effect, and get my ticket.

I have a Yaesu FT-890 that was left to me by a friend.

I use it to listen to the world along with a G5RV dipole.

Lately, I use a 50 amp pyramid (overkill, I know) to power it up.

I have an opportunity to buy a YAESU FR-700 power supply/ speaker for a
decent price of about 80 bucks.
The manual for the FT 890 specifies the FP-800...
Will the FP-700 work satisfactorily?
I've had differing opinions here locally and need to decide quick.

In advance,
THANKS to you folks in the ham radio field for taking the time to answer.
Please respond privately via email, and here too so someone else may benefit.

Regards,
Joe Pratt, Tubecntral@aol.com

I oughta have one of those on an old tube .I know which one you mean as
I just sold a 520 a while back and rememeber the plug. I think anyway.
It's the standard octal type socket with the alignment pin right??? IE:
6146 type? If so, I should have a load of old tubes with those. I could
send you one, and you could bust it apart for the socket. MK

Mystery solved!

Though several responses agreed that they remembered a T/R switch that looked like it, it turns out that the answer was sent by a person who said:

"According to the Dow-Key ad in my 1963 ARRL Handbook, it is an RFB Preamplifier. "50 to 75 ohm impedance matching 'broadband preamplifier.' Increases overall gain by 1 to 6 S-units on all bands (1.6 to 30 mc.)"

His memory is better than mine and I remember now and will take a look in the 1963 QST volume in the library!

THANK YOU ALL!!!!

Ian, K6SDE

-------- Original Message --------

Along with some other equipment I acquired what I believe to be a 1950s, early 1960s TR switch.

I recognize the power supply it's attached to as a modified AMECO unit. I can't remember the details of the unit in the foreground of this picture which I believe is a TR switch. I also seem to remember it being late 1950s to early 1960s vintage.

Take a look at:
http://www.geocities.com/k6sde/TR_Switch/TR_switch.jpg

etc.

2370. Yaesu FT-847 AM Modulation Adjustment

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-03 00:00:00 UTC
From: Dwight Stewart <stewartx@sccoast.net>

Source record: 82394
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

I have a Yaesu FT-847 that has VERY weak AM modulation (I've had many reports to that effect). Its been that was since purchase, so I suspect poor factory adjustment. Front panel mic gain/power adjustments seem to have no benefitial effect.

Is there a simple pot, trimmer, or other component, that I can adjust to set AM modulation (which one), or should I send it back to Yaesu for repair?

Email replies preferred, but not required.

Dwight Stewart (W5NET)

2371. Yaesu FT-847 AM Modulation Adjustment??

Well, I have not gotten any responses, but I think I've fixed the problem. I traced the 'STEP" circuit out ont the wiring diagram, and pulled the covers off the radio. On pin 3 of connector 18 on the contrlo board, I found a wire that was pinched and sticking up. Apon further investigation, I found that this wire was ADDED to pin 3 - stuck in the same hole. I pulled it out, taped it off, and Bingo! the STEP button worked, but the LED was still acting up.

I removed power and traced teh extra wire to a daughter board on the bottom of the rig. Now this daughter board is obviously NOT a Kenwood product, and had been added. It has 3 IC's, a handfull of resistors and caps, and a red LED. Other connections go to: D36 (it's been clipped and there is a wire on both sides back to the new board), IC13 pin 1 (a AND gate), and the I think the SQUELCH control (I'm not sure, I pulled the wire and then went..uhh, where did this go?).

I have removed all wires except for the ones to D36, and the radio seems to function like new, even the STEP LED is operating correctly. Does anyone have any idea what this daughter board may have been suppose to do? I'm thinking like a automatic SCAN hold or???

I'm going to heat up a soldering iron tonight and finish removing this board, and repair or replace D36. I also sprayed some contact cleaner on the AF control and dried it with compressed air, and it sounds much better too! I'm on a roll!

>sold for $500 and probably isn't as good a rig as the 261A. I really don't
>have
>the money to spare but I might be forced to pick one up for that price.

I don't have the spare $$$$$ either so I just slap it on my VISA/MC
;-) .. On a more serious note there's been a price drop on the Icom
2100H also down to $179.00 and it has more memory channels and
encode/decode. I think ? the Kenwood only has encode and time you add
the decode it's more than the Icom ? .. While we're on this, IIRC
Texas Towers is closing out the Icom 706MKII With DSP for $799.00 ...
Also it seems Alinco and Radio Shack used to be lower cost
alternatives to Kenwood / Icom / Yaesu 2 meter single band rigs and
now (at least for Kenwood / Icom) they're less than Alinco and the
Shack ??

Just another reminder of this upcoming event for the second year in a row on Arpil 22nd! We still have swap tables available, but may run out!

The Eastern Idaho UHF Society will be hosting a hamfest/swapmeet in Idaho Falls, Idaho, at the Elks Lodge on April 22nd. This is an ARRL sanctioned hamfest/swapmeet with full license testing, swap tables, commercial tables, and talks on DXpeditions and APRS.

Main door prize this year will be a Kenwood TM-V7A. Other door prizes continue to be confirmed and will be posted on the web page. So, keep checking out our web page.

We have a web page - http://www.srv.net/~wa4vrv/hamfest.htm

Hope to see you there!

If you owned a 775 then you know that the DSP was used at audio frequencies.
As opposed to the 756PRO which DSP processes IF frequencies...

A very different animal...

If you are looking for equipment, or have something you want to trade or sell, our new message board will email you when you have replies to your ad's. This will keep you informed so that you do not have to keep checking back to see if anyone has replied to your advertisement.

You can scan down and look at topics, create your own topic of discussion without have to read the entire message.

Like I said, if you have something to sell, something you are looking for, or just need help or information, place your add on our new message board, and when you have a reply, you will be emailed and told who replied to it.

Just go to the CB City Website at "cbcity.com" and click on "Msg Board" and it will take you to where you can post or read the Swap-Shop Advertisements.

We have had one of the most visited Swap Shop message boards on the internet, and have seen a lot of sales take place.

Come on by and check it out, you will be glad that you did.

Our URL is in the header of this message, some come on by.

It's easy to increase power by only 6 dB, but to quadruple the wattage is very difficult!
:-)

Ref: another repeater operator who interfered with our local repeater was glad to reduce
his
power 3 dB, but he would not agree with changing the TX power from 100W to 50W.
Go figure.
Al

2398. Re: Radio install in a '98 Explorer

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-04 00:00:00 UTC
From: Doug <doug@wtp.net>
Message-ID: <8cbjlj$g4u$0@63.90.193.168>
Source record: 82254

Jim...just did an install in the Explorer for Law Enforcement....not a fun project. Put your wiring under the rug on the passenger side, hole in firewall near steering post. There's room for an antenna (NMO, 3/4" mount) just behind the dome light. Run coax up doorpost on passenger side after removing the plastic parts on it with a putty knife or wide screw driver. Tape down the coax and then reinstall the plastic pieces over the top of it. There's enough room under it. Be sure to defuse the dome light as you WILL blow the fuse reinstalling it and the vehicle wont run until you replace it. There's plenty of power available under the hood but not off the fuse panel. Trying to use one of the "taps" available commercially made can break the fuse panel from too much force to install it.

Good Luck

Hi Gang,
I have for sale several sections of Andrew hardline coax. All used sections were installed and removed by a professional tower crew. All ends have been sealed. Several of the sections have connectors installed. All are in good shape. Prices are per linear foot. Here is a list:
60' 1 5/8" $2.00
125' 1 5/8" $3.00
150' 1 5/8" $3.00
215' 1 5/8" $3.00
100' 1 5/8" $2.00
100' 1 5/8" $2.00
100' 1 5/8" $2.00
125' 1 5/8" $2.00
125' 1 5/8" NEW!! $5.00
140' 1 5/8" $2.00
215' 1 5/8" $3.00
45' 7/8" $2.00
75' 7/8" $2.00
75' 7/8" $2.00
75' 7/8" $2.00
35' 1/2" $1.00
40' 1/2" $1.00
All items are pick up in central Iowa. Shipping can be arranged at the buyer's expense. Yellow Freight will ship to almost anywhere. You can reach me at 515-243-5293 or of course email is OK. Thanks and 73,
Alan

That information is in the service manual for this radio, if you buy it.
I recall that a special plug is needed that plugs into the programming jack
which then enables service mode. This plug can be made with a 5 pin din
plug, I think. I don't recall the specifics of using the service mode.
You need to borrow a copy of the service manual, or have someone make a
copy of this area, for you.

2405. FS: Ten-Tec gear Update

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-04 00:00:00 UTC
From: randas@mindspring.com
Message-ID: <8cbph8fnv1@nntp9.atl.mindspring.net>
Source record: 82261

The Amplifier, power supply and transverter are sold..(Thanks)

I still have for sale the following equipment. All in fine working order, and can be heard on the air. Would prefer to have local pickup (near Louisville,KY) but will ship in factory boxes if needed.

Omni-VI plus (factory upgraded to option 3)
All filter slots full Standard 2.4kc filter
#288..1.8kc SSB filter 6.3 IF
#285..500hz CW filter 6.3 IF
#282..250hz CW filter 6.3 IF
#218..1.8kc SSB filter 9mhz IF
#217..500hz CW filter 9mhz IF

Radio is in near mint condition..I'd say a 9.85 on the 10 scale. (10 being "perfect")

Included with the radio is a near mint 961 power supply/speaker , all power cables, manuals, and factory boxes.

Price for Omni-VI plus and power supply... $2,150 "OBO" and some help on shipping if needed.

Have a "mint" 238 tuner..includes the factory supplied 1000pf 500V capacitor for added help on 160m if needed. Have manual and factory boxes.
Price for tuner is ..$300 plus help on shipping. (The buyer of the Omni-VI will have first chance at this tuner)

He did not say for *how long* he wanted to quadruple the uh, wattage. But why stop there? I recommend using a tuned long wire antenna, and discarding the 12V supply in favor of a 3kV power supply on the HTX-10. This will open up the hidden "spread spectrum" capabilities of the unit, along with auxiliary illumination features.

Hope this helps.

2409. FS: Icom AH-4 Auto Antenna Tuner (never used)

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-04 00:00:00 UTC
From: Patrick <py@mail.com>
Message-ID: <8ccc6qjqu1@slb1.atl.mindspring.net>
Source record: 82265

Icom AH-4 Automatic Antenna Tuner: $225 (includes shipping, handling, and insurance)

If interested, please e-mail Patrick at py@mail.com

NEVER BEEN USED.

This tuner works with almost any Icom rig and almost any other HF rig as well. This tuner covers all amateur bands from 80 meters through 6 meters when used with a 23-foot long wire antena. With a mobile Icom AH-2b antenna element, it will tune from 40 through 6 meters.

- Input power: Max 120 W
Min 10 W

- Auto tune time: new band: 2 - 3 secs
same band: 1 sec.

- Tuning Accuracy: VSWR < 2:1

- Memories: 45 (stores SWR minimum and tuning combinations)

- Frequency coverage: 3.5 - 54 MHz

Original documentation included.

Thanks,
Patrick

Hold the LIGHT, B and # key while powering on.
That's 4 keys to press simultaneously!

Where are you?
Callsign?

2413. Yaesu FT-50: AM Problem Never Mentioned?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-04 00:00:00 UTC
From: "Kenneth M. Gianino" <ken@hnvr.com>
Message-ID: <38E9E63E.5F65A937@hnvr.com>
Source record: 82269

I've brought my Yaesu FT-50 to several airshows now and have experienced the same problem each time. At first, symptoms seem similar to the off-channel blocking you have all experienced on FM- a nearby transmitter causes your receiver to lose the signal to which you are listening. In the AM mode, however, the FT-50 stops receiving strong on-channel signals -a dynamic range problem with which I am not familiar! This usually happens when the airboss (located 50 to 500 ft. away) talks using a 10 Watt radio and a discone antenna on the civilian or military bands. The FT-50's s-meter shows the signal as full strength and the squelch opens, but the modulation disappears. Removing the antenna or holding my hand over it usually cures the problem. Does anyone know how Yaesu actually handles the AM receive in the FT-50? It sounds like the IF is going into hard-limiting with strong signals and stripping off the "AM". Lets hope they use a different system in their aviation handhelds!

Now if I could get all those fingers going at the same time, I would be in heaven. I tried this and every time, I must have had one finger slightly off the key, cause it took a long time to co-ordinate the fingers. I guess that is what High Technology is all about.

2417. Ham radio garage sale II - HF/VHF/QRP/tuners/power supplies/more

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-04 00:00:00 UTC
From: ham@w3eax.umd.edu
Message-ID: <8cctv8udd1@w3eax.umd.edu>
Source record: 82273
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,misc.forsale.general,dc.forsale.general

I will trade for an Icom 706 in good shape. See bottom for reason.

I live in Eugene Oregon, and Portland is only 110 miles away. Will also be at Dayton in May if you want to pick up something (small) there...

Anyway, here's my huge garage sale list. Enjoy. Forward this list at will.

HF RIGS (QRP and otherwise)

Ten-Tec Paragon 585, excellent condition. General coverage HF xcvr. Box, manual, mic, std. filters. $950

Radio Shack HTX-100 10m SSB/CW mobile, good cond. w/box $125

Oak Hills Research "Classic," 20/40m QRP CW rig. Some scrapes but works well. Manual. $170

Small Wonder Labs SW40 40m QRP CW rig w/painted factory case. Nearly perfect condition, w/manual. $80

Norcal 40A 40m QRP CW rig. Excellent cond. $90

Ten-Tec 1340 40m QRP CW rig. Excellent cond. w/manual. $80

Ten-Tec 1340, not quite up to snuff. $70

Emtech 40m QRP CW rig. Manual is somewhere around here. $80

Heathkit HW-9 w/PSA-9 power supply and vinyl dust covers. Excellent condition. Comes w/all WARC bands installed - 80-10m. W/manuals.
$375

SGC SG-2020 compact 20w portable general coverage SSB/CW xcvr. Sells new for $675, hardly used. Extremely rugged, exc. cond. w/manual. $525

ANTENNA TUNERS & WATTMETERS & OTHER STUFF

MFJ-1621 porta-tenna - good shape, whip is around here somewhere. Permits operation from hotel room, hilltop, etc. on what MFJ claims is 40-10m. Sells new for $89.95, asking...
$66

Autek WM-1 computing wattmeter PEP/avg computing wattmeter. Unit is in near-perfect condition physically but I seem to remember something about it not working last time I tried it a year ago. Sells for $133 new, asking $85 as no wattmeter is that hard to fix...I just don't have the time to think about it right now. $85

Radio Shack digital wattmeter, MTA-20. New in box. Works down to a watt (use one myself for QRP) and up to 2kW. $50

Barker & Williamson VS300A, handles random wire, balanced line and coax-fed antennas. Excellent condition, probably have manual lying around. $72.

MFJ-934 combination 300w antenna tuner / artificial ground. New in box. New price is $169. Theoretically eliminates RF current on equipment chassis by creating current sink on either actual ground wire or single counterpoise thrown out window, laid along floor, etc. $130

Nye Viking MB-VA top of the line antenna tuner. Handles many kW. Sells new for about $850. Excellent condition, rarely used over a few watts. $525

AEA QT-1 antenna tuner w/wattmeter. Someone once put too much power through it and the some of the coil forms, well, melted. It's pretty much the same as B&W Airdux. However, the coil still looks like a coil, and I've used it successfully on HF and 6 meters at QRP levels. The rest of the unit is in excellent shape and the metering works fine. Has a cross-needle meter. $50

VHF radios

Alinco DR-610 2m/440 mobile. Excellent condition w/box, manual, $360

Radio Shack HTX-212 50w 2m mobile FM, excellent condition. $150.

Radio Shack HTX-242 50w 2m mobile FM, excellent condition. $160.

Radio Shack HTX-202 2m handie talkie - great ham-band-only RX. Excellent condition. Comes w/battery, charger, antenna, and manual. Have one with box and two without. $110 ea.

Alinco DJ-F1T 2m HT w/extended RX range. Excellent condition. Comes w/battery, charger, antenna, and manual $140

Yaesu FT-470R 2m/440 HT, excellent condition w/battery, charger, antenna, and manual. Extended receive. $250

Yaesu FT-50R w/FTT-12 DVR keypad. Excellent condition w/box, etc, $240

Radio Shack PRO-2039 base scanner, cell blocked, exc. cond. in box,$160

Radio Shack Pro-51 handheld scanner, cell blocked, exc. cond. in box,$160

VHF amps & accessories

Comet CF-360 HF/VHF duplexer, break point is 30 MHz. $45
Diamond MX-72DN (N on UHF) - 2m/440 duplexer $32
Larsen AD2/70 2m/440 duplexer - UHF connectors $25
Radio Shack HTA20 30w 2m amplifier, in box $50
Radio Shack HTA20 30w 2m amp, exc. cond. $45
Non-working Radio Shack HTA20, don't remember why not wkg. $20
Mirage B23 30w 2m amp, on/off switch installed, VG cond. $55

RF Concepts VHF-1-60 2m HT amplifier, 1w in gives 60w out. $160

Power Supplies

Lambda LNS-P-12, 12VDC @ 14A, good cond. $75
Lambda LM-D12 12VDC @ 10A, screws missing. SIX pass xistors. $50
LH Research, 5V @ 150A & 12V @ 10A. $100
Tripp-Lite PR-7B 12VDC @ 5A (7.5A surge) $35
Video camera power pack - 12 VDS @ 2A w/cig. ltr. socket $35
Mitsubishi 12VDC @ 800mA underrated power supply $25
TrippLite PR-4.5A 12VDC@3.5A (4.5A surge) $27
Astron RS-35A 12VDC@25A (35A surge) $120
Astron RS-20A 12VDC@16A (20A surge) $70

Aaaarrrrgh! After 1000s of mobile QSOs the unthinkable happened!
Sometime over the weekend, something in my trusty IC-706 popped and
my transmit power is at zero at all frequencies! Seeing as how it's
my primary station and what I do when driving, I'm working on getting
it fixed and back to "normal..."

If you have a 706 I might consider a trade as I wouldn't mind having a
SPARE rig...

Offers considered but no trades, please - that's how I got into this
situation :) All prices are plus shipping.

I've had better luck cleaning the rubber and traces with a bit of
acetone or lacquer thinner, applied VERY carefully with a cotton swab
to keep it off the plastic parts. It seems that the oils in the rubber
build up on the traces and reduce the conductivity of the connection.
If all else fails, real switches with hard contacts could be used, but
you are talking MAJOR surgury there. You might also try using a dry,
stiff nylon brush to get the glaze off the surface of the pads and
traces.

Yep, they are great radios--I have one also, but a different model.

Seems I've seen this ad 5 or 6 times, *ALL* of us (or is it just me
??) would like exactly what we paid for new gear (or more) when we
sell it ;-) Another problem is that there's been a price decrease
and you can get a *NEW* Kenwood 261A in the box with Mfgr's warranty
delivered from HRO for $159.00 ... FWIW I'd drop the price a few bucks
(won't kill you) or stick it on eBay and you might ?? get more than
you paid for it. ;)

Cheers ....

Read Radio Communications Receivers by Cornell Drentea, Tab 1393, if you
can find one.

I do not disagree with your comments. We all need to study a bit more
regarding receivers, and stop buying and accepting inferior receiver
performance. Bells and whistles should take a lower priority.

2430. Elecraft K2 SSB processor (in)efficiency

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-04 00:00:00 UTC
From: ignacy@num.ads.uga.edu
Message-ID: <38ea142c1vtanpl$mr2ice@news.uga.edu>
Source record: 82286

The SSB compressor is on the SSB board of Elecraft K2, as was pointed out by a few message. Thank you.

The compressor uses a compressor chip SSM2165, which can equalize the output signal over a large range of the input signal. Aso, the chip attenuates weak input, resulting in less ambient noise. The value of the timing capacitor in K2 (22 microF) generates a time constant of about .1 S. This means that the signal from K2 will be even, and natural sounding because it is not clipped. It also means that its strength will be down 3-4 db from rigs with AF clipping and 6+ db from rigs with RF clipping. Reducing the capacitance to 1-2 microF may help although it would decrease audio quality.

Many reports praised K2 and clamed that this rig is as good as any other rig, including the OMNI. While its simple and up-to date design results in good performance with low parts count, it seems that on SSB this rig will be no match to rigs with real speech processors. It may have a nicer sounding signal though because of less distortion from fewer filters and less circuitry. Can somebody do an A/B comparison with a rig that has RF processor?

I am discussing these ideas beacuse I planned to buy K2 for travel. With battery and ATU built in, and very low weight, this could be an ideal travelling rig. With low power and low efficiency on SSB, phone operation may be marginal.

Any ideas?

Ignacy, NO9E

2431. Re: Icom 756 Pro Review

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-04 00:00:00 UTC
From: ignacy@num.ads.uga.edu
Message-ID: <38ea422b2vtanpl$mr2ice@news.uga.edu>
Source record: 82287

For many hams, the most important problem is working a station and not digging it out of the noise.

Most of the rigs have sufficient dynamic range. They have also sufficient 3rd order IMD, sufficient sensitivity and often selectivity. Better rig is rarely a substitute for good antenna for for noise-free environment (free from power-line or dimmer noise)

756 PRO looks nice, probably sounds very well because of wider bandwidth and flatter filters, and has voice keyer. Judging by its model number it is not a contest quality rig such as FT-1000 or IC-775. It costs a lot but less than 1000 or 775, and there are those who want to buy it.

Because of the digital stuff, 756PRO may actually cost less in production than 756. Perhaps it will cost $1500 in two years. It could be like IC-706MK2G which cost >1300 a year ago but now is down to $950.

Don't waste your time. The 847 is not made with AM in mind. You would
have to do some major surgery to make it sound OK.

That is truly an amazing price for a new 2M rig. In 1986 the Kenwood TM2570
sold for $500 and probably isn't as good a rig as the 261A. I really don't
have
the money to spare but I might be forced to pick one up for that price.

Hello All,

I have a Yaesu VX-5R Tri-Band HT (6m, 2m, 440 MHz) for auction.
It comes with external DC Power Cord, BNC-to-SMA
adapter, and if the auction passes $305, you will have a choice
of one of 3 speaker/mics.

Please Visit:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=296351188

Thank You & 73,

Mike KQ6MU

My '91 Explorer is probably quite different, but here is what I
did for antennas:

Read through the service manual section on how to drop the headliner.

I removed the sunvisors and some trim around the front and one side
of the headliner to drop the front and right side edge down far
enough to get access to the bottom of the roof. I may have had to
remove the dome light, too. I did not have a sunroof or any other
stuff on the roof to complicate things.

There is a possibility of creasing or doing some damage to the headliner,
so be careful. This job is not for the impatient.

Use a 3/4" punch to make holes for NMO or LM mounts. To put something
in towards the back where you can't really get good access under
the roof you can use a hole saw for NMO. The punch makes cleaner holes, though.

Run the coax to the right front and fish them down the "A" post.
They'll come out under the dash.

Reinstall the headliner. If you only take down the front and one
side edge it's not that difficult to put back.

I would add these comments as well,

The radios seem to cost more and more yet the 3rd order Intercept point, plus the noise floor gets no better. The blocking dynamic range figures in new ham radios seem to have reached a plateau, and dont seem to improve. The transmitter 3rd order IMD and phase noise could be better. They need to Throw out the crappy antenna tuner and put in a decent preselector/postselector. Why do we need a colour screen, when it is of little use, a mere gimmick. Ah how about a decent calibrated S meter. It would have been far better to provide an output to connect directly to a cheap scope to monitor your signal and band activity. I wonder what the new Yaesu and Kenwood is going to be like, same crap different day? Seems the simple basic RF engineering is way too hard for these companies. I wonder if these engineers have ham licenses?

Numerous people could tell you off the top of their head, the engine size, horse power and fuel economy and many other technical aspects of their automobiles. But yet few seem to understand what makes a good receiver and accurately understand what all the pertinent figures are. Most hams would not know what the dynamic range or the third order intercept point of their transceivers are. Yet they published every month in QST, how many bother to actually sit down and try to understand what they reading. These comments about poor performance could be made about all the current generation of top line radios, but you will still hear people on the air say that "i have had them side by side, and this one is better", yet the figures dont support these conclusions. I would get laughed off the air if i said that a FT102 is a better performer than a Icom 756 PRO in most areas. Yes how many knew that, but just look at the figures + 15dbm third order intercept point, good low noise floor and a good dynamic range. The transmitter is certainly one of the cleanest around at -40db third order IMD. This radio must be 15 years old! So we have not come far in real terms in some instances we have gone backward. The 756 PRO is no Rhode & Schwartz, yet its trying similar architecture a Rhode costs 20,000 bucks and a PRO 3000, you can see from this you not going to get something for nothing. For the moment i think the manufacturers should drop DSP and go back to basic analogue design of the 80s and they could deliver one hell of a radio. Dr Ulrich Rhode has pointed this out in numerous articles over the years, but the Japs dont seem to listening. The old IC765 with Dr Rhodes PIN Diode mods blow the IC765 PRO out of the water in terms of receiver performance, beating every other radio including the miserable FT1000MP. But we the suckers who keep buying the singing and dancing crap boxes, and talk ourselves into believing that its the second coming of christ, well some hams do!!

Use an ordinary pencil eraser. For tougher cleaning, get one of the old typewriter eraser sticks (like a pencil with a funny bristle brush on the end where the 'eraser' should be). That is - if they still make 'em, since the typewriter is pretty much dead.

There may be ink-type erasers, too, that are more readily available.

I think the original post was more directed at dash mounting - namely the Explorer has very little choices because of the aero-styling of the cockpit. My Limited is worst of all the Explorers because of the integral console and digital status readout. There ain't a darn bit of space for sticking in even a remote head.

I am contemplating some sort of flip-up bracket to rest over the digital display, to which a remote head would mount and still give access to the readouts when desired.

The only other choices would be rip out the console or mount on the passenger side (where it would be dangerously out of easy reach).

I would have had more space and more options in the TransAm, if I still had it.

I would *guess* since the TS-50 covers only HF that if you were to
subject them to a battery of tests (S/N , dynamic range, etc) that
the TS-50 might be somewhat superior? However when you consider that
the Icom gives you HF, 6 and 2 meter capability I'd have to spring for
the Icom even though I'm usually a Kenwood buyer. Just my opinion.

I realise that Yaesu did not put a lot of effort into AM when they designed this radio, but I'm getting what I think is unusually weak AM modulation. Others that I have contacted on the radio are reporting a strong signal, but have to turn up their volume and listen hard to actually hear what I'm saying. That cannot be normal, no matter how bad the AM section was set up.

Actually, I've had the radio for several months, and have never used the AM mode. A friend, an older ham that is addicted to older AM radios, was the first to discover this problem when he wanted to talk to me using one of his older AM rigs. At first, we thought his older radio was the problem. But after a check with a couple of other operators, with newer rigs, we finally figured out that it was my radio with the problem.

At this point, it looks like the radio is headed to Yaesu for repair.

By the way, several people have suggested the mods pages around the internet. None of these, so far, seem to have any info that would help. The hidden allignment menu does not seem to have anything to adjust AM modulation, at least not that I could find. If you know something I don't (not hard), let me know.

I have two Kenwoods for sale....

A TS 450--------fair condition on the case--still works great---transmits and recieves fine......a few scratches and the flourescent display is slightly wacked...it is readable. a great deal at $425.00----shipping included.

A mint TS 570G--newest version -about a year old. No scratches-----no dents---a great rig at a great price----$725.00--firm. Price includes shipping. Save about $400.00 over new!

I have two Ameritron amps for sale:
An Ameritron AL 1200. Used very little. About a year old. Original price was $2,100.00. Save $500.00 over new and save the sales tax!!!!! Will sell for $1600.00 firm. Price includes shipping.

An Ameritron ALS 500m---mobile 12v. 500 watt amplifier. Original price was around 675.00. Will sell for $350.00. Price includes shipping.

And finally. I have an Outbacker OB HP--500 watt 75 to 10 meter mobile antenna. Great condition---rarely used. Original price was $299.00.
Will sell for $165.00. Price includes shipping.

Greetings All,

To make a long story short, I tried a new mike out on my Yaesu 757 GX II, (new mike to me, an old Turner) mike worked great until I tried VOX operation with it, kept getting erratic behavior which should have been a warning sign but noooo I had to think the anti trip was set too high..... anyway 5th time or so I enabled the VOX the display went haywire, I got a hum where I never heard a hum before, VOX button wouldn't do anything so I killed the power immediately. Upon power up both display and audio were nonexistant, but I disabled the memory and fortunately everything came back, EXCEPT the radio won't come out of "fast tune" i.e. it will only tune in 1 khz steps and not the 10 hz it should. Looking at the schematic the fast/slow tuning seems to be controlled by Q67 in the local unit, but the VOX is controlled by Q56, I can't seem to figure out where the problem might be or how it happened. Is there anyone out there who has had this problem before, or knows more than me (that isn't hard to do!) and can offer some suggestions? I have the service manual for the 757 GX (not the II, but it seems quite similar)

Any helpful ideas greatly appreciated!

Nope, I tried that too (I found a mention of this on one of the mods sites). If I fiddle with the power and gain knobs any more, I'm afraid I'll wear them out. I feel certain that I've tied just about every combination possible with those controls.

Either I fix the problem using something more complex (internal adjustments), or the radio is just plain broken and needs repair.

The DSP is at about the same IF as in the 775, 36 Khz. The PRO may have
the dsp locked into the agc in some form which is a plus over the 775.

I'm waiting for the ARRL lab test report. Then we can really compare
apples to apples.

I'm an OTR truck driver and am in the market for a dual band mobile and dual band HT to use almost exclusively in the truck (excepting the HT).

I'm very interested in the Kenwood TM-D700A. Not so much for the packet operations, but it has a lot of bells and whistles that others don't, like CTCSS/DCS scan functions and expanded receive. I'm intrigued by it's ability to act as a repeater with an HT that has a cross band repeat function. This brings me to the HT...

I like the Kenwood TH-79A. It has cross band repeater functionality. It also has a BNC antenna connector, which I see as a big plus. NiCad battery is a minus, but I believe Maha makes a NiMh battery pack for it.

How well do Kenwood mobiles hold up in mobile applications, keeping in mind that an 18 wheeler shakes and vibrates a lot. How is Kenwood's warranty service? How sturdy are their HT's?

Any light you can shed on the performance of these radios would be appreciated.

2478. 6 cm hpa's

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-05 00:00:00 UTC
From: Tim Wilson <tim@cmwave.com>
Message-ID: <38EB5EF0.9FE8390E@cmwave.com>
Source record: 82202

FS quantity 4 Varian vzj2700d4 3kw klystron hpa's. complete and operational with solid state ipa's and 80 dB of gain. wr-137 input and output. 20 dB manual attenuator. 208 volts three phase. Full metering: beam voltage, beam current, body current, reflected power, forward power (4000 watts), drive power, filament volts and current, beam and filament hours. Many spares including klystrons,
filament and beam transformers, 3 phase autotransformers, meters, wiring harnesses, and more.
These amps have either 12 or 24 channel tubes and will make >3kw across any 40 mHz. bandwidth.
Higher power outputs are easily obtainable with reduced bandwidth tuning of the klystron. The tube is a Varian va936 series, 5 cavity. Typical operating parameters are 8kv@1 amp with PO about 3 kw. I
have operated the amps at 8.5kv with output near 4kw. The beam power supply is variable from about 4 kv up to about 10 kv. The amp has arc detection and shutdown, as well as an output isolator.
For more specific information please e-mail or phone. SERIOUS INQUIRES ONLY! THESE ARE NOT TOYS!

This radio calls for an rs232 straight cable to connect to pc. the port on the radio is a 9 pin male, serial port is 9 pin male.

Is a straight serial; pin 1 to 1, 2 to 2, etc?

Any info on hooking this to my pc?

Well stated. In addition, $3,000.00 for a chip based radio seems very high cost.
I bet the a replacement DSP chip for this rig is big bucks. For the $3K price, I believe a radio should be capable of providing 200 watts out. Maybe the next generation.

2482. Re: Yaesu FT-847 AM Modulation Adjustment??

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-05 00:00:00 UTC
From: davem@cs.ubc.ca
Message-ID: <8cfu6d$a6f$1@newcastle.cs.ubc.ca>
Source record: 82206
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

What does the RF waveform look like on an oscilloscope?

Using AM with no modulation, you should see a carrier of constant amplitude. Modulation causes the amplitude of the RF waveform to increase in some places and decrease in others - the "envelope" of the waveform is actually the audio signal. 100% modulation is defined as the point at which the minimum amplitude of the RF waveform reaches zero. You want to avoid 100% modulation, but you should be able to come somewhere near it.

If the modulated waveform shows only small amplitude changes, the modulation level is way below what it should be.

Hello All,

I am still looking around for an Icom IC-706MKII/MKIIG.
If you have one to sell, please let me know. Texas Towers
released their specials: Icom IC-706MKII w/DSP $799
and Icom IC-706MKIIG w/DSP $949.

The last person I was in contact with, offered to sell
his Icom IC-706MKII w/DSP for $700. So, if anyone
can beat this, please let me know. I would rather spend
the extra $100 for a brand new one!

You may call me or e-mail me:

Phone: (661) 272-6949
E-mail: radiotek@pacbell.net

Thank You & 73,

Mike KQ6MU

Its worth a try, but I have found that the eraser trick sometimes
leaves deposits that make the problem worse. Typewriter erasers are
real hard to come by, for sure...and very agressivly abrasive as a last
resort.

I'd clean real thoroughly with alcohol after using the eraser to
minimize leftover deposits.

And I'm really hoping my rig doesnt need this kind of attention in a
few years----just getting into the keypad is an adventure.

Just be gentle on the pads and traces....

I have had one for over a year and I'm quite happy with it. I use the
speaker on a Yaesu FT-847 for 144 and 432 MHz SSB. Generally I prefer
it to the FT-847's DSP. I bought it from a CW enthusiast who told me
that its characteristics were not suitable for CW work.

A reserve is the price, chosen by the seller, below which either the seller or the buyer can opt out of the transaction. It's generally not disclosed -- when you bid on a reserve auction, you don't know if a bid of a given amount will meet the reserve until you actually bid.

Personally, I don't like reserves and don't see the point in using them. I always set a reasonable minimum bid and let the market do what it wants.

2505. Need repair info for Kenwood TS-520SE

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-05 00:00:00 UTC
From: kr4wm1@mindspring.com
Message-ID: <MPG.1355a3fd5595cc7989683@news.mindspring.com>
Source record: 82229

A friend of mine has a Kenwood TS-520SE that isn't transmitting on the same frequency as it's receiving. On receive, it's ROCK SOLID. No drift whatsoever. As soon as he keys up- it moves up 400 cycles. Always up, never down. As he applies audio, the signal drifts all over the place. Although it has an analog dial, he has added a digital frequency readout, and can watch it move all over the place. He uses it mostly on 75 and 40m. I don't know if he's tried it on other bands. His call sign is WA2NWM, name is Don. He doesn't have internet access, and if we can't solve his problem, he'll be sending it to Kenwood for repairs. Anyone have any ideas? Please reply direct via e-mail. Drop the "1" from after my callsign so your e-mail won't bounce. SPAM protection, y'know?

Thanks, -Web Williams in Myrtle Beach, SC

2506. IC-746 Vs. FT-847

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-05 00:00:00 UTC
From: Aristotle Zoulas <zoulas@inch.com>
Message-ID: <bkmneso9vtmgc3ac0fmc2opfcvqir18jq9@4ax.com>
Source record: 82230

I need to get one of these items and I want some feedback as to which might be the best one. The 746 has better ratings on the eham web site. Both units did well in the QST reviews.

Any thoughts???

Please help..

2507. FS: SGC Antenna Coupler/Tuner

Its a pity companies like Ten Tec and Kachina have decided to go down the same road of cheapness and mediocre performance. Imagine what Ten tec could do with the Omni 6 and likewise Kachina with their DSP radio. What could be a better selling point than the best performing radio in the world? The technology of 80s delivered high performing receivers for mega bucks, that same technology now is beeing thrown into a dumpster. Hams have missed almost 15 years of leading edge analogue receiver design that delivered high performance. Look at the $500 dollar kit from Elecraft, certainly for a 500 buck radio it puts most of the $3000 plus radios to shame, its receiver performance is very good, certainly better than IC756 PRO.

Dunno about the 2600, but I have a 2500M, which is similar. I think the
2600 has more memories. But other than that, not sure the differences.
The 2500 is a pretty decent radio. Good receiver and intermod
rejection. If there is one thing I know for sure about those yaesu's,
it's the light bulbs will burn out fairly soon if you run the lighting
at full brightness. Mine has 4 bulbs in the front. I just took it apart
a couple of days ago, to see how hard it would be to change the bulbs.
Turned out to be pretty easy, except I didn't have any of the orange
shelled light bulbs around, so I put it back together until I get some
bulbs. I may turn it blue or green..g Can't decide what color I'd like.
Guess will depend on what bulbs I can find. So if you get one, run the
lights at a low level and they will last a lot longer. The level is
adjustable, and also has an auto mode. Has a little light sensor on the
front of the radio. Also I notice on high power they run hot. I use a
fan on mine mounted on the heatsink over the final module. Makes a world
of difference. The icoms are good radios too. I might even prefer one,
but they tend to cost more I think. I got the 2500m pretty cheap. MK

Sounds like the 9v supply has lost the transister. I had this on one I
rebuilt. You've lost the regulation.
More than likely you will need to change the transister on the AVR
board. Also check for any other bad parts. Diode etc. When you get it
fixed, you will need to adjust the 9v at terminal 9 on the AVR board
with a digital meter. Get it as close as you can adjusting I think VR1.
Should be 9v -+0.2v Check your manual to make sure, I'm going by a
ts-520 manual. Also adjust VR3?? for 3.3 volts at terminal RF1 -+0.1v.
Get this fixed and should cure your problem. If you check the 9v on the
AVR board now , with the shot transister, the voltage should be too
high, maybe 12v -+??? and poorly regulated. That should verify if that
is indeed the problem. Fixed, it will be solid at 9v. MK

2523. QST--FRACTAL ANTENNA CHALLENGE--QST

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-06 00:00:00 UTC
From: fractenna@aol.com
Message-ID: <20000406023759.01080.00000132@ng-cr1.aol.com>
Source record: 82053

QST--

Chuck O'Neal, K1KW, has issued a challenge to compare his 10M linear loaded antenna with the 10M fractal quad Yagi (FQY) seen on the ham page of:

http://www.fractenna.com.

The specs on the FQY indicate at least 3 dB gain compared to a dipole (in the same environment) and better than 20dB F/B. Impedance is close to 50 ohms, with no matching whatsoever.

Chuck's linear loaded antenna will have the same turning radius. Specs are not known, but Chuck contends that 'fractals are linear loading' so this should be interesting. [BTW, fractal antennas are certainly not linear loads any more than a nonlinear circuit is linear.]

On the air comparisons with DX are not scientific. That's what the specs are for. But it should be fun to see how these two antennas 'play' at the same heights, with very similar types of locations (separation about 20-25 miles LOS) and get comparison signal reports.

You are invited to hear this challenge on the air.

Plans are for Chuck and I to operate N1IR and two other local ops to operate from K1KW.

Tentative date is May 13, 2000 on about 28500 KHz. Time TBA but probably about 14 or 1500Z. Propagation to Europe is a requirement; a 'raindate' will also be posted.

Please pass this along to any list, buddy, or NG you feel may enjoy knowing about this.

73,
Chip N1IR

Ya' know, I 've read through all the postings on this thread, and ONLY ONCE did I see anything that comes close to the simplest fact out there!

So we all get the insidious "black box" radios. We can't screw with them, can't play "image monitoring" can't do anything. Somebody said, "Use the landline". Somebody ELSE brought up the ability of Gov't agencies to place an order for the local telco to monitor the landline calls at the Central Office. Yeah, but it doesn't necessarily happen there.

Delving into the black helicopter theories; I'll do the old "I could be fired for saying this" accreditation; but here's reality: Sometimes the monitoring doesn't take place at the C.O. There's usually a large distribution box somewhere in your neighborhood....all the copper pairs congregate there to be connected to feeder cables going back to the C.O. Guess what, any fool could take the "jack portion" of an RJ11C and attach it to the appropriate screw terminals. Voila, you're on the line. "But hey, the boxes are locked!" Okay, so you're a mildly sophisticated crook; and you don't have a lockpick set? And if the box DOESN'T have a lock - MANY DON'T - does the mildly sophisticated crook have a Harris 216 tool, commonly called a "can wrench"? How about a 7/16" socket and ratchet? Terminals right near the house? Try a little catch called "multiple appearances" - cable pairs that are terminated in more than one location. Clip on to the cable pair somewhere other than at the terminal feeding a specific residence. This is not "secret information" by any means....been out on lots of calls to track down these instances - usually to locate long-distance service crooks; who don't care about whose line they're on, as long as they can call Aunt Edna in West Slobinia on somebody else's nickel.

IN NO MEANS IS THIS MEANT AS A PRIMER ON TELEPHONE THEFT/PRIVACY INTRUSION!!!!!!! If you're larcenous/devious/STUPID enough to try this, I FERVENTLY HOPE YOU GET CAUGHT AND THROWN IN JAIL! It's sometimes my job to help put clowns like you away; and I get some pleasure in that part of my job. What I'm saying is that you can't trust in the confidentiality of ANY conversation that's not face-to-face; in a closed, hermetically sealed, foam padded room (and then, those who have reason to be truly paranoid better check the light fixtures)! And, like gun laws, any "privacy laws" regarding communications are ONLY effective on THOSE WHO NORMALLY OBEY THE LAWS. It's like the old saw about the "Private Property-Keep Out" signs that keep away the law-abiding; and serve to pique the interest of the bad guys. Crooks who don't really care until they get caught won't give a d*** about any other laws they break.

Just think about it.

Jim Allen

"Thank you for reading this mail. I am looking for a replacement fabric display drive belt for my HP 8555A Spectrum Analyser plug in. From the service manual the description for the belt is "A1A4MP51: Dial cursor/belt assembly" and the HP part number is 0350-0049. Unfortunately, since the unit is so old, HP no longer show this item on their spares database. Does anyone have one they would part with, or point me in the direction of a source for this part?

Best Regards

Brian G4FZL"

> What does the RF waveform look like on an oscilloscope?

Don't really need an oscilloscope to know things are not working correctly here. When a friend just down the street has to turn up the volume to hear me (even with a very strong carrier present), there has to be something wrong. Since discovering this, and trying this mode with several other people, all have reported seeing a strong carrier, but can barely hear me when I talk.

Either the radio was poorly adjusted at the factory, or the radio has developed a problem since then. Whatever the case, I need to get this fixed before the warranty runs out. So, it appears that the radio is heading for the shop soon.

2534. FS: Ten-Tec Omni-VI Plus and Tuner

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-06 00:00:00 UTC
From: randas@mindspring.com
Message-ID: <8ci13lqoc1@slb6.atl.mindspring.net>
Source record: 82064

I have for sale the following equipment. All in fine working order, and can be heard on the air. Would prefer to have local pickup (near Louisville,KY) but will ship in factory boxes if needed.

Omni-VI plus (factory upgraded to option 3)
All filter slots full Standard 2.4kc filter
#288..1.8kc SSB filter 6.3 IF
#285..500hz CW filter 6.3 IF
#282..250hz CW filter 6.3 IF
#218..1.8kc SSB filter 9mhz IF
#217..500hz CW filter 9mhz IF

Radio is in near mint condition..I'd say a 9.85 on the 10 scale. (10 being "perfect")

Included with the radio is a near mint 961 power supply/speaker , all power cables, manuals, and factory boxes.

Price for Omni-VI plus and power supply... $2,100 "OBO" and some help on shipping if needed.

Have a "mint" 238 tuner..includes the factory supplied 1000pf 500V capacitor for added help on 160m if needed. Have manual and factory boxes.
Price for tuner is ..$300 plus help on shipping. (The buyer of the Omni-VI will have first chance at this tuner)

Buy both and I'll ship insured 48

Looking for a couple of parts for a Heath MT-1 transmitter.
Need one medium-size knob (satin finish, not chrome), and
the glass "window" that covers the VFO dial drum. Could
also use a cabinet that doesn't have extra holes drilled
in it. Oh, almost forgot... need a manual/schematic too
(good clear photocopy would be fine). I've located the
schematic on line, but it's HUGE, and if I scale it down
to fit a printer, even in pieces, it loses all of its
resolution.

There was aproblem with the TS-520SE that caused it to shift frequency
when sending CW. The problem was fixed by gounding the case of one of
the crystals under the radio. I found the fix either in a mods file from
the QRZ CD or as an ASB (amateur service bulletin) on the Kenwood site.

.....Hmmmm... you say you tested your 847 on Ten Meters to check the AM capabilities of your rig? That's interesting, seeing as your Technician class license does not allow you to utilize the AM mode on any band except 11 meters, where, of course, your 847 is a 'non-type accepted' rig. (..and I'd guess from your posts in the CB news group that's where you're were planning on using it) FOR SHAME!!

I have a 2600M in my car, and I've had very good success with
it. Reports indicate that it provides a clean signal and that it
doesn't pick up an excessive amount of background noise.

The reception is good and operation is very intuitive. If
there is one major weakness, it's the very small size of the speaker
(it's front firing) which sounds a bit sharper than some rigs.

As a comparison, I have an FT-8100R (2m/70cm) in my shack and,
apart from the specialized features not available on the 2600M, the
only real difference between the two is in the tonal quality (the
8100R has a top mounted--larger-speaker).

One problem I've encountered with the 2600M (and it may be
unique to my rig) is that in very cold conditions (I live in Michigan)
it will occasionally "lock" on a frequency (i.e., you can't change the
frequency). This only occurs when the rig is very cold and is cured by
simply turning it off and on again. I've heard one or two other
reports of the same effect, so I assume it's either a bug in the
design or a problem with earlier production units (I bought mine soon
after it was introduced).

Overall, it's an excellent rig. I've had the chance to compare
it to the IC-2100 directly, and apart from a slightly better tonal
quality from the 2100, I found it to be a significantly better radio.

Hope that helps,

Rick

now that's interesting. Can you say why you prefer it to the ICOM
2100? I own a 2100 and I am interested in the Yaesu 2600 for my other
car but I was wondering what the concrete advantages are. One thing is
for sure, the 2100 is cheaper by quite a bit ($180.- vs. $220.-)
Thanks!

Source record: 82075

Please read my challenge. No "terms" were stated or agreed.
This response is therefore useless and this "plan" is a joke.

THE conditions are simply the same as you employ
during your 10M runs: You run your stuff and get reports from some
DX station. I run my stuff and get reports from the same DX station,
either right before you or after you. We compare reports and therefore
determing whose system is working better. Just like in the real
world during a contest. None of this attempting to equalize things....
too communistic for me. You can make any assumptions concerning
the comparative reports you feel necessary to account for power,
antenna gain, phase of the moon....ect. in the determination of how
your antenna works.

This is just as "scientific" as your run postings in determining antenna
performance....probably more so since there will now be a reference, me,
and any others that wish to join in. There are a few locals that will
probably
join us as well..

I will be running my normal station. 1 KW and my homebrew log antennas.
I suggest you run your amp if you have one so the difference won't be
too great....as long as your antenna can take it.

Anyone else is free to join in on the fun. I will be on this weekend,
Saturday morning, 28.450 - 28.460 starting at aprox. 9 AM EDT.
Maybe Sunday morning as well.

73,
Chuck...K1KW

I am a truck driver also, and I have used Kenwood dual bands for about 4 years. First was a 733, then I replaced it with a V7A. I have no complaints at all. As a matter of fact the 733 replaced a Yaseu 2400 mil spec rated for vibration, and the Yaseus tuning knob quit working. No trouble with the Kenwoods yet. BTW, I now use the 733 here in the house.

I have for sale the following:

TAC310 VHF mobile radios. Radios are 16 chan synthesized, non-scan.
40W power out, front firing internal speaker. Very compact, 1.73"H
X 7"W X7. 87"D. Weight 4.5Lbs. Will cover any 5 Mhz
segment from 136-174 Mhz. Programmed and tuned/tested per your
instructions
for 16 channel/PL combinations. Includes microphone and mounting
bracket. $85 each + shipping

GE MVS "T" band mobile radios, 470 - 512 Mhz. 16 channel synthesized,
40W power output. Radios have scan, and PL/DPL encode/decode.25 Khz chan

spacing. Complete with microphone and mounting bracket. Programmed per
your
requirements.
$95 each + shipping

Also have a FEW GE MVS as above, but mid split
440-470Mhz.... $125 each + shipping

Henry commercial mobile power amps...C130A30, 30W in for 130W out..
Tuned and tested to your frequency needs, 135 - 174
Mhz. $85 each + shipping

2549. HTX-10-Ideas for adding CW

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-06 00:00:00 UTC
From: raoul@olympus.net
Message-ID: <raoul-0604001706340001@pt19476.olympus.net>
Source record: 82079

Group:

Just purchased the new HTX-10 rig from Radio Shack. So far, I'm happy with it.

I've been searching for modifications for it and it seems that all the 'normal' type mods- freeband, CB, 12 meter, roger beep- have been engineered out. I don't care about all those (the 12 mter mod would be nice, though.) For lots of reasons, I'd like a mod to add CW.

I've ordered the schematic from RS but it hasn't arrived yet.

What about using an audio tone in USB? Would this make a much-too-wide bandwidth as has been suggested to me by a ham buddy?

Are there any options for adding CW in this rig? Anybody had any luck adding CW mode to this rig?

> planning on using it) FOR SHAME!!

No, I did not say anything of the sort. If your read back over my
last few messages, you'll find that I said in one of those messages that
the problem was discovered by a friend, an older ham that is an AM aficionado.

To elaborate, while he was over at my house one afternoon, he
attempted to contact his wife at home (an excuse to have her talk on an
old AM radio he had left hooked up before he left the house - he wanted
to see how it sounded). By the way, if I remember correctly, he was on
20 meters.

When she could not hear him very well, all of us assumed it was his
old radio at fault. However, we took my radio over to his house to try
a few more tests, just in case. Later that night, he attempted to
contact another friend who also had an AM radio and the friend also
reported very weak audio coming from my radio.

In an effort to better understand how the radio sounded, he went down
the street to listen in his car while I continued to talk to him on the
radio (his wife was present as control operator).

The radio has been operated on AM on only two other occasions, to
attempt contact with several people at another ham's house (under his
license) and at a local repair shop.

By the way, Crunch, if you had read that earlier message, you would
have also saw that I said that "I've had the radio for several months
and have never used the AM mode." I use an old, unmodified, Cobra 1000,
that I purchased many years ago, to occasionally talk to friends
(CB'ers) that do not have a ham radio license.

I think that qrz.com has a list of assorted radio modifications on their web page. Find the stuff for the TS440 and go from there. It should tell you which resistor was clipped to perform the mod, and if it is just a matter of reconnecting one, well you are in business. If the component is missing, it might be more trouble than it is worth. Sorry about your lack of zen. For most of us around here, we know where the band limits are and choose to respect them.

First of all, if I were to apply your logic to radio in general, I wouldn't have a ham radio either (it's possible to call anyone in the world using the telephone). I talk with my friends on the CB radio for the very same reasons I talk to other friends with the ham radio - its fun. I tend to enjoy our weekly roundtable discussions (its not easy to talk to eight or nine people at the same time on the telephone).

Gee, you would think a person posting to a radio newsgroup would understand the appeal of radio (any radio).

Damn, you're weird. I don't have time for these petty little games.
What does it matter what band he was on? That has nothing to do with
the point. To be honest, I didn't really pay attention to what band he
was actually using. He could have been on any band. I only mentioned a
band because you mentioned the 10 meter band, which I know he was not
using - his radio won't do it.

For that matter, what business is it of yours? You're hinting that
I've used my radio illegally in the CB band, which I have clearly
denied. However, if you still think I've done that, or anything else
against the rules, report me to the FCC.

Until then, stop with the innuendo, and go away.

Not quite all. The radios listed on Motorola's site are the commercial
versions.
The amateur version will allow direct keyboard entry of frequencies.

This radio isn't the new one. The Micom-2/-2E has been around for a while.
It is actually built by
MOBAT, a joint venture in Israel.

I'm pretty happy with the Micom-2E (have four of them). They are (at the
moment) the least
expensive commerical HF ALE radio available. I use them on NCS SHARES and
FEMA nets
with good results. Just be careful - that they are well grounded - the PIN
diodes are a bit
fragile.

There has been a bit of discussion about doing this on the QRPL. The last I heard, someone was very successful with a Twin-T audio oscillator. As far as transmitting a wide signal, it depends solely on how clean your sine wave going in is.

I would like some advice on Icom radios. I had an IC-720A and would like to get a later model. The current models like the IC-756Pro look great, but are a little out of my price leauge. I was thinking about getting a used one but there are are alot of models that I am unfamiliar with. What are good ICOM HF transceivers to look for? What modes are upgrades to the 720A?

Here are some models that seem to look good, can anyone let me know about these radios and how they compare to the 720A?

IC-751A
IC-745
IC-737
IC-725

I have to agree.
I am just about to write my exam too and everybody tells me the same thing!
Set up a small inexpensive base antenna and transfer a mobile from house to
car.
I am using a Kenwood TK-270 commercial handheld radio for work right now,
trust me, the mobile is so much nicer to use.
Handhelds are only 5/4.5W usually and mobiles are 50/45W, so your coverage
would be far greater along with a cleaner reception with the mobile.
I'm sure someone will prove me wrong on this last point, but it is my
experience with this VHF radio.

Just My Opinion

Hi Bill,

I own both the 2600M and the ICOM 2100H. Yes the Yaesu looses it's memories for no good reason. This can be a pain so I bought the software for programming it.(50.00 CDN) The Yaesu is excellent at rejecting intermod, in fact this was my first radio and did not even know what intermod was until I bought the ICOM 2100! The speaker on the Yaesu is pathetic so you will have to buy an external speaker unless you you leave your windows up in your car. The unit is suppose to be 60 watts but on a friend's test equipment 55 was the most the unit would put out. So I now use Yaesu in the house full time so the memory problem is fixed quickly with the computer.

The ICOM 2100 is a lower priced rig and intermod is problem. The speaker is much better and people say I sound clearer on this rig but your mileage may vary. The menu functions on the ICOM are harder to use ie. entering frequencies from the mic's keypad require pushing extra buttons. The display is larger on the ICOM and the squelch is a front knob control verus the Yaesu's is a menu command. The ICOM's mic has a plastic cover for the buttons which also covers the holes for the condenser mic which makes you sound like you are talking from a tin can. (mine is off full time). But the mic has more funtions than Yaesu's.

Conclusion: I thinks the Yaesu is a better radio but more expensive (50 for software and 30 for a good speaker plus being 50 more for the radio vs the ICOM)). I live in a city and intermod is a problem if you turn the squelch up full on the ICOM then most intermod is eliminated but I loose a couple of fringe reapeaters/ simplex stations. I am a little afraid of leaving expensive equipment in the car due to theft so I was looking for a cheaper radio (ICOM IS 50 BUCKS CHEAPER). Plus if you use the Yaesu in the car and

the memories go you have to reprogram manually or haul out the radio and use the software on your computer (unless you have a laptop).

Hope this helps,

Barry

Welp im not a truck driver but i do drive a very noisy jeep wrangler with
a soft top that loves to flap..
i used to use a yeasu ft-8500 everyone said it had alot of background
noise.. i also ran an alinco
dr-600 same thing ..alot of noise... i just placed a kenwood tmv7A in
there and everyone says the
back ground noise is alot less than ever before, i actually have to exceed
60mph before anyone even
mentioned it..after i asked of course... so as far as noisy back ground
noise like in a truck..i think the
kenwood has proven itself here. However a bit of bad news.. on the d700
out of the 2 that are here
locally.. the one fella who is a truck driver gets daily complaints on it
being extremly noisy the other
well it loses it 440 side offset alot..i think i would luv to own one of
those but i think ill let the general
population pick em apart first..hi,hi. .. oh yeah you like cross band
repeat ? the v-7 can be remotely
controlled from you ht..good luck im sure any of the metioned rigs will be
great ones..just thought i
would add my 2 cts. woth since ya asked...john

2589. Icom IC-761 Display Problem

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-07 00:00:00 UTC
From: shale@north.nsis.com
Message-ID: <38ed74f7.8134804@news.ng.nsis.com>
Source record: 82099

Thanks for viewing. I have an IC-761 with a display that keeps
going blank. I know that it is a common problem with these rigs. I've
had the display board out and resoldered all the traces. It cured the
problem for a few months but now it has become intermittent again.
Wondering if someone could pinpoint the area where the problem exists
so I could cure the problem once and for all.
Thanks again. Scott VE1AFN.>

2590. FS ICOM IC-756 HF Transceiver like new!

> source for this part?
>

I would suggest making one yourself. Go to a needlework/fabric type of
shop and get a length od ribbon the same width as the belt.
Then carefully with a soldering iron, melt in small holes spaced as per
the original belt. This does take a bit of time to master.

I have used this technique a few times now and is still going strong after a
couple
of years use.

Not a real common trouble as you suggest. DP-6 on the display board
goes into trouble. It is the DC to DC converter that supplies voltage
for the actual fluorescent display

Gee Dwight, why do you need to talk to your friends on CB. Since
you are limited to 5 watts and 85 mile radius why not just use the
telephone. Costs about the same except you don't waste electricity
using the phone.

Sounds great, but... how much will it cost? Motorola equipment, as a rule, is quite "spendy". Will they be able to compete with YaeKenCom in price? It will be interesting to see how this plays out. I hope Motorola will be able to keep the price down and grab a piece of the market share. Ten-Tec has been able to hang on in the face of some stiff competition from Asia. SGC is slowly digging in. Hmmm... if Motorola is successful with this venture, maybe R.L.Drake will jump back into the fray on HF! We can only hope! :)

73,
Dean, K5DH (can you tell I'm a Drake fan?)

wa8shc@stratos.net says...
> The IC705 will be a better choice for only 1 reason...it has DSP which the
> TS-50 doesnt even have as an option. I own a 706, and the DSP does work

True, the DSP does work on the 706. However, it isn't all that
fabulous. The algorithm seems to squash weak signals, as well as static
and hiss. <shrug> I am comparing it to my "home" rig, a Kenwood TS-570.
One argument in favor of the 706 is that it has 6 and 2 meter (and
perhaps 70 cm). All in one radios are convenient, especially in the car.

73,

Adam, KM5N

2613. FS: VHF, UHF, "T" Band mobiles....130W VHF amps

I have for sale the following:

TAC310 VHF mobile radios. Radios are 16 chan synthesized, non-scan.
40W power out, front firing internal speaker. Very compact, 1.73"H
X 7"W X7. 87"D. Weight 4.5Lbs. Will cover any 5 Mhz
segment from 136-174 Mhz. Programmed and tuned/tested per your
instructions
for 16 channel/PL combinations. Includes microphone and mounting
bracket. $85 each + shipping

GE MVS "T" band mobile radios, 470 - 512 Mhz. 16 channel synthesized,
40W power output. Radios have scan, and PL/DPL encode/decode.25 Khz chan

spacing. Complete with microphone and mounting bracket. Programmed per
your
requirements.
$95 each + shipping

Also have a FEW GE MVS as above, but mid split
440-470Mhz.... $125 each + shipping

Henry commercial mobile power amps...C130A30, 30W in for 130W out..
Tuned and tested to your frequency needs, 135 - 174
Mhz. $85 each + shipping

?????????? What electric company do you have that charges 7-12 cents a MINUTE for a 20 watt lite bulb's worth of electricity. BTW, the limit is 155 miles not 85 . Also , using your logic no one should be talking to their friends on 6, 2M 220 or 440 FM either, using the phone instead, for that matter, using YOR logic (?) no one should be using HF to talk across country to their friends either, because it costs the same 7-12 cents a minute to make a call anywhere in the country, again ASSuming we all have your electric company......

I have two amplifiers for sale.

The first is an Ameritron ALS 500 m---12 volt amplifier. 500 watts out.
great condition----no dents or major scratches. Perfect working order. Used
very little.
$350.00-----price includes shipping.

The second is An Ameritron AL1200---full 1500 watts plus. An Excellent
amplifier
in Excellent condition--like new. Used very little. Original price was $2,100
+ tax.
Selling for $1600.00---You save the tax and the price of new---for one that's
as good as new!

I'm the original owner of these amps--not a dealer.

Will ship COD via UPS.

I'm selling due to building a home and no time for Radio!

OB8HP version-----75 meters to 10 meters. Up to 500 watts.
Excellent condition. Used only in the summer and for one year.

Selling for $175.00 ---Original price was Over $300.00. with tax.

2625. ICOM IC211E Manual wanted!!

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-07 00:00:00 UTC
From: John Cooper <datasafe1@callnetuk.com>
Message-ID: <o2csessm4etovvh09jvg948t3r7ur8fcfr@4ax.com>
Source record: 82135

Hi all,

I know the Icom IC211E is an old rig but it is still one of the best
on receive with the Mutek front end replacement.

Unfortunately I have lost my manual for this rig and really would like
a copy. I am particulalry interested in the connection details at the
rear panel as I need a PTT line for my linear and pre-amp. Also, I
want to fit a pip-tone generator.

Can anyone help, I will pay all costs of course.

Regards

John

Sorry you have the wrong phone company. It doesn't costs me anymore
to make a local phone call unlike the power and useless chatter
heard on the CB. Shit on there is enough to drive a sane person to
go crazy. No wonder we have a very 'low' mentality in this country.

I also thought 6, 2M 220 or 440 FM is used to bypass the phone
company by using auto patches instead of the Cell phone. The only
other use is for emergencies..

I will agree in a general sort of way. I like Motorola equipment but they have come out with some real DOG radios. My employer uses Motorola Syntor-X 800Mhz trunking radios, and they are the worst excuse for a radio I have ever seen. We have had replaced, worked on, even back to Schuamberg and the STILL don't work right. Good news is, I am told they will probably be replaced this year.

Yep:

Are you building a UHF Repeater? Need a UHF Compact Duplexer? I have come accross a couple of Motorola TLD7407A / Celwave P633-6A Band-Reject Duplexers in Excellent Condition. I can also supply some RG-124B/U Teflon Coaxial Interconnect Cable to insure optimum performance. Will also tune to you frequency to insure you get a Duplexer that has not been damaged by miss-handling.

Picture @

http://www2.4dcomm.com/metrotech/celwave2.jpg

Perfect for those applications where a GM300 / Maxtrac / Radius R100 Repeater is being used. Will handle up to 50 Watts.

$195.00+ 8.00 for shipping and handling

Terms:

Acceptable PrePayment in the form of a Postal Money Order (If immediate shipping is desired) or a Personal / Business check is A-OK too if you do not mind a Short Shipping Delay due to bank processing time. This is required only the first time or two as once you are in the data base, PrePayment is no longer required

For you CW purists, I propose the following 'new' test in case you ever
decide to use any other mode of transmission:

1. You must type 40 wpm to use packet.
2. You must 'master' an 1880's crank-style telephone
before you can use a common cellular phone.
3. You must monitor the 500KHz maritime CW distress
frequency for one week, since even the GOVERNMENT
no longer monitors it! (They went satellite/digital)
4. You MUST NEVER deviate from the 30 meter band!

THERE...now everyone's happy!!!

> IC-751A

A pretty decent radio. But getting along in age.

> IC-745

Likewise. I've rarely seen a 745 owner that didn't like it. The 740 is
about the same except ham band only. I've heard many brag on the
receiver in the 740.

> IC-737

Dunno about receiver, but the ones I've heard over the air had "pinchy"
audio quality. Dunno if a mike problem, alignment, or what.. I'd be
leary, and test the audio if possible. But other than that , I guess ok.
It's newer than most the others you mention.

> IC-725

Pretty decent little barebones mobile rig. I tried one once for a couple
of days, and was ok. Had good "big radio" audio quality on receive, but
limited features overall, if you like a few bells and whistles. At the
time, I had the 725 in the shack, I also had a 720a, and also my ic730
which I've had for a long time. Of course, the 720a had the most bells
and whistles, and the audio on 75m with the 725 sounded pretty good, I
still preferred the 730 to either one. Was more user friendly than the
720a, and had more bells than the 725. Don't overlook the IC 735.
Another real good rig. Also the 761 is pretty good. IC 765 too, but the
price starting to creep up. MK

2643. Best Dual Band Mobile?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-08 00:00:00 UTC
From: "Andrew P. Scott" <apscott@dallasnews.com>
Message-ID: <B5155015.D97%apscott@dallasnews.com>
Source record: 81903

I'm in the market for a 2m/70cm dual band mobile to install in my Jeep.

Rigs I'm tentatively looking at:

Alinco DR-605TQ

Kenwood TM-G707A

Yaesu FT-90R

All these are in the $375-$400 range, which is around what my budget (wife) will allow.

I'm intrigued by the compact size of the Yaesu unit given the tight confines to install in my Jeep, but wondering if that small size will also mean diminished performance. Also, I cannot find out if the Yaesu can be set up to act as a repeater. Is it able to or not? I believe both the Kenwood and the Alinco can.

Any comments/comparisons from those familiar with these units are appreciated.

Thank you in advance.

-aps

2648. Motorola Releasing a HF Ham Radio at Dayton

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-08 00:00:00 UTC
From: Jack Peters <a.as.switz@talk21.com>
Message-ID: <FZIH4.613$5D.1188@ozemail.com.au>
Source record: 81959

Motorola will be releasing a Digital DSP HF Transceiver for the ham radio market at Dayton. This news surely will be welcome news for hams since this companies technical excellence is well known. Surely this will bring pressure on the Japanese to improve their design skills. Not many Japanese Ham radio companies have the resources and inhouse expertise to compete with Motorola. My inside information has revealed that this radios reproduction of SSB transmission borders on hifi quality making most Japanese DSP radios look like 5 dollar Chinese junk. Most problems associated with all DSP radios have reduced to a point where its hard to tell that you listening a digital radio. This will be a welcome return of an American manufacturer using state of the art components and DSP techniques.

Hi all,

I'm interested in a Kenwood TS-950SDX, and found a used one at
a good price. The serial # is 00700004. The owner states that he
bought it new in April 99. Does this jive with the serial # ????

How about another one I found whose Serial # starts with
10xxxxxx ???? The owner thinks that this might be an older one. He's
not the original owner.

Thanks,
****

Well, it is fairly obvious, from your comments, that you're just trolling for an argument.

You're wasting power with your computer to post useless chatter about the useless chatter on the CB (of course, I'm sure you see your useless chatter as somehow more important than the useless chatter of others). And then you attempt to dismiss VHF/UHF by claiming that it is only used for phone patches and the occasional emergency.

Keep trying - perhaps one day you'll get better at it (trolling for arguments). Until then, I'm sure most will simply ignore your nonsense.

Martin Johnson - KC7ZWG wrote:
>
> hey there,
> also have a 847 and was wondering what you did to fix it?

Well, Martin. I received a message from Yaesu that recommended that I turn the AM carrier level down to about 20-25 watts by adjusting VR1020 (located next to the crystal filter on the main board). This is below specs, but Yaesu insists that it will help the situation.

However, Yaesu also admitted that the AM mode will never sound as strong as that on a dedicated AM radio (often high-level plate modulation units), but Yaesu insisted that adjusting the carrier down will "make it sound quite reasonable."

>
> WAKE UP fella', and re-read his post - he's talking about TRANSMITTED
> AM, *NOT* receiving! The part about GETTING reports of low audio, and
> his MIC GAIN not helping are pretty good clues...

Gee, I think you missed something, Gary. His message has nothing to do with the other posting about the AM modulation problems I'm having with my FT-847 - the messages just happened to be posted at about the same time, with similar titles.

He's talking about the FT-50 (a very popular handheld), while my message thread is talking about the FT-847. My message is talking about transmit problems in the AM mode, while his message is discussing receive problems when scanning AM modes.

Be careful, you have to read those subject lines carefully before responding. I see similar topics, with similar subject lines, posted all the time. It's fairly easy to get them confused if you're not paying attention.

Anyway, stuff like this happens all the time. Don't worry about an occasional mistake (everyone has made mistakes).

You are right but when talking about internal (junction) temperatures.
I'm talking about external (case) temperatures. Higher power transistors
normally have better heat junction-to-case transfer; so, for the same
junction temperature, more heat is transferred to the case. As this is a
better radiator than a smaller transistor, the overall system will
withstand a higher output power.

FS, the following items..

TAC310, commercial synthesized VHF mobile radios.. Compact(1.73"H X 7"W X 7.87"D) rugged units. 40W output power, 16 channel, PL encode/decode programmed per channel. Front firing internal speaker. Supplied with Microphone, Mounting bracket, and programmed per your specs. $85 each +

shipping.

GE MVS "T" band (470-512Mhz) mobile radios. 40 W output power, 16 channel w/scan. PL/DPL encode/decode programmed per channel. Supplied with microphone, mounting bracket, and programmed per your specs. $95 each + shipping.

Have a very few of the GE MVS radios as above, but Mid split...440 - 470

Mhz for ham band use... $125 each + shipping.

Henry commercial VHF mobile amplifiers. Model C130A30, 30W in gets 130W out.. Supplied tuned per your requirements, 5 Mhz segment from 130-174 Mhz. $80 each + shipping.

E.F. Johnson mobile extension speakers...Same appearance/construction as

the standard Motorola speakers.. Black in color, with mini phone plug on

end of cable... $17 each + shipping, new in box.. Current Johnson price is $43 each.

Interesting trades for communications receivers and vintage electronics items considered.

Thanks

We need to welcome new hams all that we can by slowing down repeater ID's.

Repeater ID guidelines found on QRS-Qsignal.COM website:

>The CW speed for repeater ID's must be lowered so new
>hams can feel pride in knowing what repeaters they're
>kerchunking. The ARRL recommends 5 WPM for repeater ID's
>but the FCC disagrees and suggests the speed should be
>lower because some individuals may have tested with W5YI and
>might only know CW to 2 WPM. Repeaters with voice ID's
>must be programed to talk slower to accomodate restructured
>hams who are still learning the alphabet. Elmers who want
>to help new hams with their CW repeater ID skills, should
>focus on the letters found in phrases like "Welfare check" or
>"Food Stamps" as restructured hams are more familier
>with these terms. When a restructured ham can correctly
>identify the words "government-handout" or "breaker one nine",
>they're ready to ID repeaters on their own.
>
>QRS-Qsignal, when you want your message understood.

Is $1500.00 A good deal on a used Kenwood TS-950SDX? it has like 2 months use on it, a freind of mine (who was a ham, who's now a silent key) 's aunt has it, and wants to sell it to me, for this price. It also comes with a Mic (not sure which one, it's a desk mic.) The radio is like 2 years old now..

just wondering.....

thanks.

2680. FS: Dual Band 144/440 Collinear Base Antennas $59.95

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-08 00:00:00 UTC
From: AntennaWareHouse <kingpop@cis.net>
Message-ID: <38EF7F8C.540F508D@cis.net>
Source record: 81991

Hello,

I have Dual Band Collinear Base antennas up on a eBay Dutch Auction
for $59.95. These are 8' fiberglass antennas comparable to the Diamond
X200a. They have 6db gain on 2 meters and 8 db on 70cm.

The Auction ends 4/9 10:20 pm cst.

The listing is at:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=299587098

This is a Dutch auction, which means no worries about being outbid at
the last moment, or the price sky rocketing because of bidding wars.
You bid, you pay, you get one!

Be sure to check our other auctions and website for other great deals on
Amateur, Scanner, and CB, Antennas.

Thank you

AntennaWareHouse

(anti-extra-lite rant snipped)

Oh please..
This new "extra-lite" to be is maintianing three repeaters. I rebuilt
one from scratch, after a lightning hit reduced it to parts rattling
around in a nice box. This was more fun because our previous "all
extra" tech committee had lost the docs, so I had no schematic to
work from, and most of the damaged parts were unidentifiable. I'm
also president of the local ham club, and I design various electronic
gizmos for the point of sale on the side. (The last big one sold over
5M units) I passed the gen, advanced, and extra tests last weekend
with no studying, and I used a calculator once on the advanced exam.

Maybe some day I'll see the attraction of CW, but I rather doubt it.
I'm getting old fast enough, without waiting around for the beeps to
happen.

How about we fix the technical requirements of ham radio to match the
majority of the "old extras" that I know :

All rig control microprocessors must be banned. There's nothing that
you can't do with the right crystals anyway.
No privileges at all unless you are over 50 yrs old, with at least
three major ailments to gripe about on the repeater.

Seven days to extra :)

I think all the info posted thus far is correct for the year, but there was a post on the FT-1000MP Reflector stating that the designation for the month starts with "C", so January would be "C", February would be "D", etc. I can't verify this however, but at least you will know the year and within two months. BTW, there is a menu function on the MP that reads out the date of manufacture.

WELL - since this subject lingers...

My only complaint against the original bit, in the "audio quality" section, related to the suggestion that a scope is needed to constantly monitor modulation bandwidth and symetry.

BS!

Sorry folks, but I bought and operate my stuff to COMMUNICATE, and I seriously challenge the notion that we're so dense that we "need" a scope at either the transmitter OR receiving locations in order to really judge the "quality" of the incoming or outgoing signal... SURE, we need to be aware of the operating parameters of our gear, and the way we have it set up in relation to manufacturer's specs. but I swear *I* wanna PUKE when some self righteous, self-appointed "modulation expert" grandly informs me my carrier is "only 98.3% modulated", and that my audio could use another 15 cycles of lows and another 5 cycles of highs to make it "perfect"...

HELL fella' can you HEAR and UNDERSTAND me? I'm NOT planning on selling commercial airtime. nor do I plan on transmitting music - all I want or expect is to be HEARD and UNDERSTOOD as well as band conditions and reasonable equipment settings will permit!

Do some splatter or use excessive compression or gain settings? SURE - but it HARDLY requires a scope, or "modulation genius" on EITHER end to figure that out or correct it, and *I* personally consider the pompous criticisms of the few audio perfectionists as a type of "audio pollution" all its own... I use amateur radio to LISTEN to others because their CONVERSATION interests me - NOT so I can hook up some visual device to WATCH their transmissions, and when I encounter a fella. more interested in how MY signal "looks" than he is in what I have to say, it's time to look for another contact!

there is a mod for 200 watts,

check AC6V web page of links under equipment mods.

It is capable of 200 watts, but does not have the heatsink or fan to keep pace, most are backing them down to the power you require. I would look at a radio like the JST245 which has -38db third order IMD, and 150watts output, it is a good candidate for driving tubes with handles!!

Hi, I read your message in the newsgroups, and have something you may
be interested in.

I have two transmitter repeaters with controllers that are 60W
continuous duty

They used to be the repeaters used for the police Dept where I live,
but now the dept has gone digital. The Radio dept was going to throw
them out so I grabbed them, and I would be willing to sell them cheap
as I don't know enough about that kind of stuff to get them
operational. My intent was to sell them at a hamfest.

Right now they are setup to transmit on 143.765Mhz, but are easily
modified & tuned..

1 Unit was the main repeater, and the other was a Standby.

They were made by General Electric, but from what I understand, GE
sold their tranciever section to another company in the US. I have
their name & phone number here somewhere, I could always find it, as I
got it off the Net.

I'm sure schematics are available from them.

I would be willing to sell them for $200.00 + shipping for the package(including controllers. All units are Rack mountable and are solid units. (They were for Police Radio, so they are built to last.)

In any event, for $200.00 you really can't go wrong

So let me know if your interested

73's

Derek

PS. The model numbers are"

Unti 1: MS2177-1

I have the TM-G707A in my car -- head mounted just above the rearview mirror, mic on dash, speaker on doorjam by my left ear - radio in trunk. Love it- wouldn't have anything else.

Have the TMV7A in the shack, also perfect. Head by the computer monitor, mic on the left, radio on theother side of the room --- love it.

TMV7 does repeater -- TMG707 does not. It is a dual band / single freq radio. The V7 is a dual band/dual freq radio.

dunno about the others, but I have been buying kenwood vhf/ufh radios since 1977 and haven't been disapointed yet.

cheers

p.s. smaller size doesn't mean smaller capability -- those Japanese keep making things smaller and smaller until you can't read the labels on the buttons or even find the things while driving. :)

I have a FT-90, receiver performance and intermod rejection are great. Have no complaints with output power or audio. No, it does not crossband repeat. My best comparison to give is a mobile FT-50. Single VFO, dualband, CTCSS encode decode AND DCS encode decode with DCS search. Perfect size, I remote mounted the unit in the back of my extended cab truck with the face on top of my steering column. Does not get in the way of my view and very little button/knob manipulation is need through my steering wheel as you can do most everything but menu functions on the mic. I had a Kenwood TM-V7A and friend had a G707A. I was disappointed in the TM-V7A display fade when it got hot. The displays on the Kenwoods are very nice but the compactness of the FT-90 is very nice. Also, the TM-V7A crossband repeat function is a little sluggish if using a HT and you are using CTCSS as it takes a slight moment for it to decode and retransmit. The Yaseu's I have had before were very fast in crossband repeat mode. Friend has Alinco DR-605. He has only one complaint, no Alpha display I believe. Maybe he has a different model, Anyway you can compare the specifics but I am willing to trade off between dual VFOs/crossband repeat for small size. Just depends on what you would like best. No real problems with any of the models you list as far as quality of tx/rx.

You're in luck this month. Radio Shack.com which used to by TechAmerica has the DR610 on sale this month. They've knocked off $100 making it $349.95 which is a steal. Its much better than the 605 especially because it does dual in band receive. None of the other radios you've mentioned will do dual in band rcv . I would never be without this feature because I mostly listen to 2 meters on both sides. If you could come up $19 from that $400, you could get a FT8100 from Texas Towers. It has dual in band rcv, intermod protection built into the IF like it shouldbe and scans at 26 channels per sec. Forget Kenwoods, they scan at 4 per sec and are intermod sponges, Alinco at least has an attenuator to help here. Go for the DR 610.

Covers 10 - 160 meters. No mods to the radio. No extra filters. Radio is in excellent condition. Radio was acquired from the estate of a close friend who passed away. Radio has always been in a non-smoking environment. No boxes but do have the manuals. Antenna tuner works great.
Got my eye on another rig and must sell this one first. Picture availble by request.

$675.00 plus shipping.

Source record: 81929

I have a FT-8100 and a TM-V7A. As far as features their both loaded with more bells and whistles than I'll ever use. Both seem to has about the same performance on transmit and receive. The display on the FT-8100 is easier to see in full sunlight than the TM-V7A but the blue glow on the Kenwood is easier on the eyes when it's dark. Both of these rigs can be setup as a repeater. Neither the FT-90R nor the TM-G707A can do repeater function. I don't know about the Alinco.
On the down side the FT8100 is back at Yaesu for repair, for the fourth time! In fact I bought the Kenwood to replace the Yaesu in my truck so I could have a rig to use. Now if I can just get the Yaesu fixed long enough to find it a new home!
A friend of mine has one of the FT-90R's and has nothing but good things to say about it. Also hear good reports on the TM-G707A.
Have fun picking one.

2715. Intermittent signal loss in TS-440S

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-09 00:00:00 UTC
From: Stephen Seal <sdseal@magma.ca>
Message-ID: <20000409.14393000@stinky.sealtex.ca>
Source record: 81939

Hi everyone:

I have a Kenwood TS-440S that is exhibiting signal loss/severe attentuation when first turned on. Usually, if I let the rig warm up for a while, the problem will go away.

During this attenuated state, transmitter output is also severly reduced. I can tell this buy using a RF power meter and noting only about 1 watt RF is output in any mode. I can also tell by checking power consumption on my power supply : when auto tuning the antenna for example, it normally draws about 6 amps @ 13 volts; when in this funny state, it draws less than 1 amp. I've seen this behavior when tuning with a dummy load or with a real antenna.

Has anyone seen this problem, or have any ideas?

Thanks

Steve

2720. AT-200 WB TX mod doesn't work!!

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-09 00:00:00 UTC
From: Marvin Moss <mmoss@mindspring.com>
Message-ID: <8cq3qocgi1@nntp9.atl.mindspring.net>
Source record: 81944

The widely-distributed well-known mod on the various mod sites for MARS operation (outside the 2 meter hamband) using the AT-200 does not work. I tried it several times with no success. Interestingly enough, the mod is the same for the AT-201. I wonder if someone used it on the 201 and it worked there and assumed it would work on the 200 without really trying it.

Do you have any info on this mod and why it will not work on my 200?

TIA,

Marvin

2722. KENWOOD MANUFACTURING DATES VS SERIAL#

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-09 00:00:00 UTC
From: rong@computer.net
Message-ID: <38f0927f.1543321@news.computer.net>
Source record: 81996

Hi All,

I have a previous message posted concerning 2 TS-950sdx's and
this subject. I have another question though--If a Kenwood radio has
spanned 10 years or more, how do you tell which decade it was
manufactured in ??

Does anyone know when the TS-950SDX started in production ???
I know that there was an "S" and an "SD" model before the "SDX". I am
looking at 2 SDX'S, and one of their serial #'s start with 00, and the
other one starts with 10. The guy with the 00 model says that he
bought it in 1999, which could make sense as 00 translates into either
1988 or 1998. I don't think the SDX was manufactured in 1988. The guy
with the one starting with 10 is not the original owner, and thinks it
is an older one. Could it have been manufactured in 1989 ??? I don't
think the SDX went back that far. PLEASE HELP !!!

2723. FS: Lot of BIRD Wattmeter Slugs

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-09 00:00:00 UTC
From: plrjer@visi.net
Message-ID: <38EFF646.A0DCF196@visi.net>
Source record: 81997
Cross-posted to: rec.radio.amateur.equipment,rec.ham-radio.swap,rec.radio.amateur.swap,rec.radio.cb,sci.electronics.misc

This Lot consists of the following slugs: 1. 25-60 MHz 25W (NEW), 2.
50-125 MHz 50W (USED), 3. 100-250
MHz 50W (NEW), & 4. 200-500 MHz 50W (USED). One of the new slugs has the
letters smeared but I assure
you it is new. The two used slugs are in like new condition. These slugs
come with a money back guarantee less
S&H if you are not satisfied with them. I am asking $175 for all four.
This is about half of what I have in them.
These slugs generally run from $80 to $100 new. Buyer pays $4.50 S&H to
anywhere in Continental U.S. and Canada. Shipping will be via 2-3 Day
Priority Mail. Other methods can be arranged if requested. Payment must
be in the form of a money order or certified/cashier's check.
Please email if you are interested or have any questions.
Thanks in advance!!!

James

Here is a link to view the slugs:

Hi all,
I am trying to step up my licence and am looking for a HF rig, so as to read CW under realistic conditions. I am looking for an old rig, it may need some work on it or a rebuild, so if you have an old HF Rig that you don't want anymore then please let me know. I will pay the 'Post and package' and the cost of the rig, i don't have a lot of money at the moment, so it must be cheap. I have looked at some old 'Ham Catalogues' and sort out some 'Transistor' rigs, (don't know much about Tubes/Valves). IC701 or IC720A or IC730 or FT101 or FT107 or FT707 or TS130 or TS430 or TS530 or ASTRO-103 or ASTRO-150 - or Swan or Drake or Collins or Ten-Tec. I don't know of any others.
Please send me your rig details per e-mail.
I thank you for your help, Thank you.

From: DBNDEL <dnicholson@socket.net>
Message-ID: <sf1a2bamcqv40@corp.supernews.com>
Source record: 82002

I have a good working MFJ VHF analyzer for sale. It is abt a 8-9 on a scale of 10. some scratches on the case. Works great . I just put a new battery in it for what thats worth. No manual<lost long ago> but the unit is easy to use. measure SWR on any VHF ant from 138 to 156 MHz. I just bought a new MFJ 269 and have no need for the smaller unit now. The MFJ 208 is still a current item in the MFJ catalogue for $79.95

I will sell it shipped for $45

73 Dan

I never said that a scope was needed to "constantly " monitor audio. Don't put words into to my writting, that are not there!
Gary - KJ6Q wrote:

WELL - since this subject lingers... My only complaint against the original bit, in the "audio quality" section, related to the suggestion that a scope is needed to constantly monitor modulation bandwidth and symetry. BS! Sorry folks, but I bought and operate my stuff to COMMUNICATE, and I seriously challenge the notion that we're so dense that we "need" a scope at either the transmitter OR receiving locations in order to really judge the "quality" of the incoming or outgoing signal... SURE, we need to be aware of the operating parameters of our gear, and the way we have it set up in relation to manufacturer's specs. but I swear *I* wanna PUKE when some self righteous, self-appointed "modulation expert" grandly informs me my carrier is "only 98.3% modulated", and that my audio could use another 15 cycles of lows and another 5 cycles of highs to make it "perfect"... HELL fella' can you HEAR and UNDERSTAND me? I'm NOT planning on selling commercial airtime. nor do I plan on transmitting music - all I want or expect is to be HEARD and UNDERSTOOD as well as band conditions and reasonable equipment settings will permit! Do some splatter or use excessive compression or gain settings? SURE - but it HARDLY requires a scope, or "modulation genius" on EITHER end to figure that out or correct it, and *I* personally consider the pompous criticisms of the few audio perfectionists as a type of "audio pollution" all its own... I use amateur radio to LISTEN to others because their CONVERSATION interests me - NOT so I can hook up some visual device to WATCH their transmissions, and when I encounter a fella. more interested in how MY signal "looks" than he is in what I have to say, it's time to look for another contact!

Hi all
Where can I get info on different models of HF and VHF/UHF radios?I'm looking for a used all mode vhf/uhf rig.I can seem to find newer radios described,but would like to learn about older rigs such as FT-726 or 736 and similar models.Mobile rigs are not out of the question. I have a FT-757 HF rig,and would like something for all mode VHF/UHF also.I'm looking at older used gear to keep cost down at this time.I still have much equipment to get.Just like to learn more about older rigs so I can make a choice.Thanks to anyone that can point me in the direction to veiw info on older models.

>Here are some models that seem to look good, can anyone let me know
>about these radios and how they compare to the 720A?
>
>IC-751A

Decent older radio. Better than your IC720A,
but not up to today's contest grade standards.
You might be happy with it.

>IC-745

This one has some issues. It overloads on
strong signals easily, not the rig I'd choose
for 75m net operation (though I did, and learned
to regret it). Also, if the battery fails, you have to
send it back to Icom to have the microcode that
runs the radio reprogrammed. Other than that,
it is a pretty nice radio to use. It has a good
feature set, and the controls are laid out well.

>IC-737

Nasty audio.

>IC-725

Bare bones radio.

Don't forget the IC735, a truly excellent radio.
It stands up very well to comparisons with
today's mid-price radios. This is what I still
use.

From: samand42@mindspring.com
Message-ID: <38f11399.14998657@news.mindspring.com>
Source record: 82022

Hello,

I recently purchased a second Icom W32a for a backup radio. I purchased the Icom Programming Software about 4 months ago and it works fine with my first radio. I bought a second W32a so I wouldn't have to program two radios manually, but I keep getting an error message when the download is complete on the new radio. I plugged the old one in and it took the download without a problem. I took the new radio back to HRO (I will never shop there again... another story) as being defective, and the replacement is doing the same thing. I uninstalled the software and reinstalled it, but it still does not work. Is there some software protection going on that I don't know about, or could it be a bad batch of radios? Any help would be greatly appreciated!

FS, the following items..

TAC310, commercial synthesized VHF mobile radios.. Compact(1.73"H X 7"W X 7.87"D) rugged units. 40W output power, 16 channel, PL encode/decode programmed per channel. Front firing internal speaker. Supplied with Microphone, Mounting bracket, and programmed per your specs. $85 each +

shipping.

GE MVS "T" band (470-512Mhz) mobile radios. 40 W output power, 16 channel w/scan. PL/DPL encode/decode programmed per channel. Supplied with microphone, mounting bracket, and programmed per your specs. $95 each + shipping.

Have a very few of the GE MVS radios as above, but Mid split...440 - 470

Mhz for ham band use... $125 each + shipping.

Henry commercial VHF mobile amplifiers. Model C130A30, 30W in gets 130W out.. Supplied tuned per your requirements, 5 Mhz segment from 130-174 Mhz. $80 each + shipping.

E.F. Johnson mobile extension speakers...Same appearance/construction as

the standard Motorola speakers.. Black in color, with mini phone plug on

end of cable... $17 each + shipping, new in box.. Current Johnson price is $43 each.

Interesting trades for communications receivers and vintage electronics items considered.

Thanks

Steve -WA6GSD

I recall reading on this newsgroup that the FT-90 had some problems when operating on some portion (147 MHz?) of the 2m band. Does anyone remember how this got resolved? I recall that the original poster was in the L.A. area. I've seen other problems posted concerning audio problems and overheating.

2759. Need manual for Standard Radio

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-10 00:00:00 UTC
From: Ray <ka3vme@vnet.net>
Message-ID: <YCfI4.6914$x62.32338@typhoon.southeast.rr.com>
Source record: 81846

can anyone help with copy of a manual for a Standard 5900 DA ?

just a copy of information on how to program the radios functions
is all that is required.

thanks,

Ray

2760. F.S. Cubic (Swan) Astro-150A

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-10 00:00:00 UTC
From: dslosty@pipeline.com
Message-ID: <38f18f30.38957320@news.pipeline.com>
Source record: 81847

The Astro-150A is an all solid state, very small rig with digital readout. It also has full QSK, built in 500Hz CW filter, VOX, and noise blanker. It operates the 80 - 10 mtr bands but doesn't have the WARC bands.

It's a totally synthesized rock stable unit with tuning via either up/down pushbutton mike or via a variable rate scan-tune knob. Input power is 235 watts and output runs around 110 watts. QST was impressed with the rig in their review. If you email me, I can send a pdf copy of their review.

The rig I'm offering (have two - only want to sell one) for sale has been totally checked out and aligned. I've made quite a few QSO's with it.

Its cabinet been repainted a medium gray, its front panel has a few minor scratches but is still presentable.

I'd like $275 plus shipping. An owner's manual copy is included, along with a power connector.

73,
Doug/WA1TUT

For sale: Lafayette HA-800B solid-state ham bands receiver.
Covers 80/40/20/15/10/6 meters, AM/CW/SSB. Runs on 115 VAC
and 13.8 VDC. Really clean and in nice condition, with the
ORIGINAL manual (NOT a photocopy). Works fine. See a photo
of the actual unit I am selling at this URL:

http://www.qsl.net/k5dh/ha800b.jpg

Price is $100.00 plus shipping.

2763. FT-50R battery drain

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-10 00:00:00 UTC
From: Charlie Hicks <chicks@ix.netcom.com>
Message-ID: <8csjsi$l7m$1@slb0.atl.mindspring.net>
Source record: 81850

I need help with my FT-50R battery drain problem.

I have an FT-50R (about 3 years old) that continually drains the battery when turned OFF after a couple days. I have 2 additional new batteries (one is non-Yaesu) that do the same. I use a Yaesu drop-in battery charger and the batteries are charging fine.

Anybody else have this problem? Do you know if there is a fix for it?

Thanks,

Charlie

2768. IC4008 technical info ?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-10 00:00:00 UTC
From: pa3gbv@NOSPAM.amsat.org
Message-ID: <38f1e6f0.22100498@news.mpn.cp.philips.com>
Source record: 81855
Cross-posted to: uk.radio.amateur,rec.radio.amateur.equipment,rec.radio.amateur.misc,alt.radio.family

I recently got the IC-4008E which gives 10 mW output power in the 434 MHz "LPD" band (Europe). As a ham I would like to get more power out of this very nice device to use it as a simplex hamradio porto in the 70 cm band.

In the UK and in the USA there appear to be higher power versions.. 100 mW and even 500 mW.

Is there anybody who can tell me more about modifications or technical details of the IC-4008 ?

Kind regards,

Stefan, PA3GBV

The AT-200 mod is NOT the same as the AT-201 mod. I used to have an AT-200, now have an AT-201. I have tried the mods on both, and been successful. If you use the AT-201 on your AT-200 you will not be successful. Let me know if you need the URL for both mods, specific for ADI radios.

For some reason, I was unable to actually drop off any info there relative to a problem I have with one of their SGC-230 antenna tuners - I *was* able to drop a line directly to their Email address, but have had problems getting a response there in the past. Here's what I sent them - matbe someone else has a solution:

======

I have one of your SGC-230 tuners that has developed a somewhat annoying problem - most prominent on 20 meters in the vicinity of 14.200 MHZ.

When going from transmit to receive, an audio tone can be heard at a fairly moderate volume level for about 15 khz either side of 14.200 mhz. I have heard the same effect on other random frequencies as well, but this particular one is most annoying because I frequently operate in that frequency range - and I'm certain that when this area is cleared, the others will be too.

The 230 operates absolutely perfectly in all other regards.

The audio tone sounds to be around 800-900 cycles, and will last for about a second before dropping out, though the actual transfer from transmit to receive HAS taken place, and the incoming signals are heard along with the indicated tone - and this effect has been verified by using the 230 on several different pieces of gear from different manufacturers, and of widely varying ages - the effect is quite noticeable on all of them. It's VERY annoying on rapid Vox use, and makes the unit worthless for contesting. No center carrier is noticed when receiving in SSB or CW mode. only the audio tone across the frequency range given above. It does this at EVERY change-over from transmit to receive.

Apparently, there is some oscillator, or function inside the 230 that remains active for a brief period after switching from transmit to receive?

I returned the unit to you for repair some time back, and while you DID make some unrelated firmware upgrades, the original problem was NOT found or repaired at that time. Since I have not made any substantial use of the 230 since that time, I have ignored the problem, other than sending you another Email like this one, which was either lost or ignored by you. But I am now planning another extended RV trip, and WILL be needing use of the 230, and would appreciate some response to my problem - surely I am not the ONLY user ever experiencing this effect!

I certainly hope you can provide some insight into my problem, based on KNOWN similar problems with other units - it's WAY to expensive to again return the unit without at least SOME indication based on past experience pointing to what is causing my problem.

So what do you say - have you seen this before, and do you have a pretty good idea what's wrong, or do I have to either live with it, sell it, or junk it?

Andy,
2 pieces of bad news.
A) The rat-shack.com "sale" ended March 31, 2000
B) The Alinco DJ-610TQ might be a good rig, but you will never get one from Radioshack.com. This is the SECOND time they offered this rig at this price (last time around it was techamerica.com though ...) and the second time it's "VAPOR-WARE" The sale never really existed because they never had a single unit to offer for sale. I tried repeatedly to obtain one during
both sales, but never could manage to buy one. Radio Shack has a history of advertising ham radio related articles in their fliers ETC, but not having the
items to sell. Since you are in TX, maybe call to the Texas state attorney general
might convince them to stop this misleading bait and switch practice .....

.

Hmm, I'm not sure where that bug crawled in your oriface, but I've
NEVER been 'shortchanged' at RS. Been treated like crap, yes.
Been talked down to, yep. Been (attempted) to be cheated, sure.
But I ALWAYS get the items I want when I want them. And bottom
line is they always come through.

I HAVE been left out in the cold on 'where-is-as-is' items and/or
closeouts. But if it doesn't say that, then I want a rain check or
SIMILAR SAVINGS on SIMILAR EQUIPMENT.

>I am looking at buying a FT-2600 in the next few weeks to put in my car,

I, too, am looking at this radio, it would be my first mobile rig.
From everything I have read it looks like a really good radio.

But I have another question about it. I have seen a web page
describing a way to extend transmit into the public service high band,
can anyone verify if it works?

http://www.mods.dk/mods.php3?model=ft-2600&radio=yaesu

I realize that's outside the ham bands, but I'm a volunteer with a
local department and would really like to avoid having to buy TWO
radios for my truck. If I can get this one to transmit and receive
around 155MHz I can talk to my dispatcher a lot better than using my
P200 handheld from inside the truck cab.

Even if that's not possible, I still expect to buy the radio (and the
software) for use on my local repeaters.

2784. Yaesu/Kenwood join "Outlaw" CB radio market

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-10 00:00:00 UTC
From: jtyburczy@aol.com
Message-ID: <20000410163058.17638.00000891@ng-fo1.aol.com>
Source record: 81871

Please note that Kenwood's TS-570 and Yaesu's FT-100 all-mode, all-band transceivers are now in the process of being price discounted, re-badged and re-marketed to the "import" (read: unlicensed) CB market.

(Italian/English translations and links below)

<A HREF="http://www.geocities.com/1at439/roosevelt.htm">http://www.geocities.com/1at439/roosevelt.htm</A>

This is the last new development of President house announced on a French CB review and like you can see is nearly identical to Kenwood TS-570. Of this transmitter-receiver is known little and nothing but a lot probably would have to probably cover 400 ch. on the band of the 11 meters in the version export and of 40 ch. in the accredited version. Features switchable antenna, filters anti disturbance, Split Mode, Dual Watch, feeding from network, etc. Price announced approximately L. 900.000

<A HREF="http://www.geocities.com/1at439/alan10001.htm">http://www.geocities.com/1at439/alan10001.htm</A>

This is the last new development of Midland house announced on a French CB review and like you can see is identical to Yaesu FT 100. This transmitter-receiver probably covers 400 ch. on 11 meters in the version export and 40 ch. in the accredited version. Beyond allowing the transmission on the 400 ch. it is possible to receive from 100 Mhz in continuous tuning!!! The transmission power is of 100 watts in AM/FM and 200 watts in SSB. incorporated Filter DSP, CTSS, DCS, DTMF, possibility of transmissions in Split Mode, microphone without wires to infrared beams, frontplate separable from the body of the radio through cable. Price announced approximately 500.000 L. Who of you is disposed to spend three million in order to buy a FT-100?

From: "Emory J. Haines" <ejhaines@erols.com>
Message-ID: <8ctk5eamo1@bob.news.rcn.net>
Source record: 81876

Looking for info on the Icom AH-4 antenna tuner.
- What is its approximate size, h d w in inches?
- How well does it work mobile with short whip antenna,
would like to use it with my IC706MKII, on 6, 10, 20 mtrs.
- Is it completely automatic, can I mount it out of reach in back
of car?
- Is it worth over $300.00?
Spent about 30 mins on hold twice trying to talk to Icom tech support
and gave up. They list nothing about it on their web site.
Thanks... 73 Emory

I believe that QST had a mention of the radio. I have used one and it
worked quite well out of the box. No it can't be modified.

I need to add CTSS capability to an old workhorse HT.

Specifically, I need a Yaesu FTS-12 CTSS Tone encoder/decoder board for FT-23R Handi. This is a "one chip" board designed especially for the FT-23R. If you have one to sell or trade or know where I can get one, please reply by email.

Cheers,

Al Link

Why bother - it seems to be popping up right and left on eBay. Go
there and do a search for 'RSS'.
The boys at 'M' don't seem to care as I don't see many of the auctions
getting yanked.

Source record: 82042

Mike,

There may be some good equipment at hamfests that you can pick up cheap, but if you're going to have to repair it yourself, I'd try and stick to the Heathkits or the Drake stuff since you can normally still get parts for them and repair them yourself with rather simple test gear. If you buy a Heathkit, be sure and get the full manual for the rig since it gives complete information on the circuit boards and the wiring, not just a schematic. Some of the older Japanese rigs like the 520's and the FT-101's are only repairable by getting another rig as a part's rig and stripping that. In the case of the 520, some if not all of the older IC's aren't available any other way.

Also if you're willing to only operate CW there are a lot of older AM/CW rigs out there that can be restored and used on CW. There is some activity on AM but on the ham bands it's predomiately SSB.

Last but not least, look into a local radio club, some of the members may be able to help you get on the air with either a loaner or a cheap rig. They may also have a club station you can use until you get your own station at home. Check with the ARRL about clubs in your area.

Good Luck,

Joe

2818. LIKE NEW !!==>[Opto Xplorer " UNBLOCKED"]<===Mint

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-11 00:00:00 UTC
From: msisco9939@aol.com
Message-ID: <20000411181029.06018.00002341@ng-ch1.aol.com>
Source record: 81647

Yep:

I have a Consignement OptoElectronics Xplorer Near Field Sweep Receiver that covers the entire RF spectrum up to 2 Ghz, and YES it is also Factory Unblocked and covers the Cellular Frequencies, and would be a Perfect addition for the Professional Two-Way or Cellular Service Technician.

This will Sweep the Entire RF Spectrum to 2 Ghz in less than 1.5 Seconds, and will display the RF Frequency, Signal Level, PL Tones including Digital Coded Squech, and even will record and display DTMF Tones. This is the Super Receiver for Swap Meets to check those " working" radios before a purchase.

Picture can be seen @

http://www2.4dcomm.com/metrotech/xplorer.jpg

This has been a (1) owner type unit, and comes with a number of Factory Accessories.

The Optoelectronics Xplorer is in Mint Condition, and comes with the Factory Charger / Power Supply, Factory Carrying Case, Telescoping Antenna, and as a BONUS, has the Factory Downloading Cable and Software for your PC, and some other acc'y which are optional if you want the whole package.

$650.00+$10.00 for shipping and handling for the above, and

$675.00 if you desire the Small Antennuators which cover the 50 mhz to 1 Ghz Band (very usefull in a High level RF enviroment)

Terms:

Acceptable PrePayment in the form of a Postal Money Order (If immediate shipping is desired) or a Personal / Business check is A-OK too if you do not mind a Short Shipping Delay due to bank processing time. This is required only the first time or two as once you are in the data base, PrePayment is no longer required

>P.S. Please, by ALL means, feel free to Forward to AES Management!

And now the rest of the story!

Let me see now, because you were too lazy to find out the dimensions of a radio by simpler and more conventional means, you're all hacked off because someone whom you spoke to at AES didn't want to do your dirty work for you; and now, of course, you'll never buy a radio from them (which you probably never have and never intended to anyway.) The way I see it, they're the lucky ones. Get real and get a life.

Van,
W0NZV

Well, I had the same problem with my wife's 231. I think what happened in my case was that it is to easy to cause a short in the battery area when replacing the battery.
How I finally solved it, was to solder to thin wires to the pc board battery terminals and run the wires back to the main radio chasis. I soldered a battery I made by stacking two mecury cells together, wrapped it in tape and shoved it down an empty spot.

I did this because I was tired of digging into the back of the display to change batteries. Been good for about a year and a half now :)

If you're knowledgeable enough to use news groups, I expect you know how to get around on the wwweb? Kenwood has a web site. It gives the specs for all their radios. Dimensions, exact weight, etcetera.

The salesman may have been having a *very* busy day. Has that occurred to you? I mean, if he's an a**hole, so be it, but I guess you were to busy to look up the dimensions, yourself?

UPS also has a web site. You could have figured out the exact shipping costs, too :-)

Ten Tec makes a solid state amp, too -- the Herculean, I believe they
call it. It's at their web site.

> W0CBF

Hummm, Depends.. I would say probably the most popular mode is scotty1 I guess, but hard to say. Most all say what mode they are going to send, before they send the picture. IE:, NM5K, ugly picture of my car, scotty 1...etc. Can't really tell you the settings as each puter will time differently. Just try to follow the doc's as close as you can when setting up. If you have a sound card you also may want to try a few of those SSTV programs. W95SSTV, and chromapix seem to be about the best I've seen so far, but not exactly cheap. Chromapix is 120 bucks, w95sstv, 50 bucks. But they work real well, and have good features. I think they do a tad better than jvfax, but jvfax will do the job. I ran jvfax 7.0 for quite a while, using just a homebrew op-amp modem. IE: hamcomm type deal. But if I get back on , I'll probably use the sound card programs. MK

You don't say why you need it. If all you want to do is
prove that you
did have a call then, the older versions of QRZ on CD showed
the previous
call and the date you upgraded. This might still be
available at the FCC
site, but I've noticed recently that historical and personal
information
has been disappearing from (publicly available) databases.

FS, the following items..

TAC310, commercial synthesized VHF mobile radios.. Compact(1.73"H X 7"W X 7.87"D) rugged units. 40W output power, 16 channel, PL encode/decode programmed per channel. Front firing internal speaker. Supplied with Microphone, Mounting bracket, and programmed per your specs. $85 each +

shipping.

GE MVS "T" band (470-512Mhz) mobile radios. 40 W output power, 16 channel w/scan. PL/DPL encode/decode programmed per channel. Supplied with microphone, mounting bracket, and programmed per your specs. $95 each + shipping.

Have a very few of the GE MVS radios as above, but Mid split...440 - 470

Mhz for ham band use... $125 each + shipping.

Henry commercial VHF mobile amplifiers. Model C130A30, 30W in gets 130W out.. Supplied tuned per your requirements, 5 Mhz segment from 130-174 Mhz. $80 each + shipping.

E.F. Johnson mobile extension speakers...Same appearance/construction as

the standard Motorola speakers.. Black in color, with mini phone plug on

end of cable... $17 each + shipping, new in box.. Current Johnson price is $43 each.

Interesting trades for communications receivers and vintage electronics items considered.

Thanks

Steve -WA6GSD

Amp Supply Collector

I am a new collector of "Amp Supply Co." products
and I'm looking for manuals, information, parts,
equipment, etc.

Presently, I am trying to locate a LK500NTC, LK550NTC,
or possibly other models LK450, LK500, LK550, etc.
Please contact me with available equipment or leads.

I just bought an Alinco DJ-V5TH from Lentini for $209.99 and I suspect you can find them for that price just about anywhere as Alinco is running a $50 off special till the end of the month.

It's a great little 2m/440 radio that does 5 watts out of the box with the supplied battery. It's easily modifiable for wide receive/transmit. After the mod it will pretty much receive everything from the FM broadcast band on up to 999.999 mhz with the usual gaps for the cell phone bands and a couple more where the VFO won't lock. Also receives AM aircraft. Out of the box it does WFM and 2m/440. It scans well for an HT. It's performance on the 2m/440 bands is as advertised. I can hit many of the repeaters in my immediate area on the medium power setting with a full quieting signal (with a 17" flexi-whip). No intermod problems as of yet. It has a full DTMF pad, CTCSS encode/decode, DCS, split band operation and a big memory. The Alinco lit doesn't say that it is PC programmable, but RT Systems has developed a very nice program and sells it along with the cable. I'm 40 y/o and figured all the bells and whistles out in a couple days, so I'm sure your 11 y/o will pick it up in an afternoon.

Drawbacks? The only one I can find is that it has a NiCad battery. This may be ok for some, but I dislike them. I contacted the usual suppliers of third party NiMh battery packs. Nobody currently sells them but Maha told me they were in the process of arranging to produce them and to watch their web site for details in the near future. NiMh batteries and a Maha drop in quick charger would make this a fine little unit.

Bottom line, I'm extremely happy with this radio and would strongly recommend it!

When you make these requests you need to post your call sign,
(doing that avoids the usual ragging on CBers.)
and perhaps the frequency(s) your are interested in.

2869. Trade Heliax for Radio Equipment

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-11 00:00:00 UTC
From: The MERIT Radio Group <meritradiogroupNOmeSPAM@netzero.net.invalid>
Message-ID: <20dc953a.08602540@usw-ex0108-063.remarq.com>
Source record: 81814

The Merit Radio Group of RI has recently acquired several lots
of various unused Heliax and Radiax commercial grade cable.
Because we are a "not for profit" organization, we are looking
to trade radio equipment (HF Rigs, VHF/UHF Rigs, Amplifiers,
Repeaters, HT's, or Misc items) for your cable needs. Your old
radio equipment will to be used for search and rescue maneuvers
by amateur radio op's when called upon in an emergency situation
(for more info on MERIT Radio, see the link below to our
website).

Cable must be picked up in the Rhode Island/Southern New England
area unless you can figure out a way for us to ship it to you.
Below are the various brands and sizes we have available:

ANDREW RG318/U HJ5 7/8" Heliax, .200dB/100" Attenuation @ 30Mhz
ANDREW LDF6/50 1-1/4" Heliax, .136dB/100" Attenuation @ 30Mhz
ANDREW LDF5RN-50a 7/8" Heliax, .197dB/100" Attenuation @ 30Mhz
ANDREW RXL7/2RNT1 1-5/8" Radiax, .112dB/100" Attenuation @ 30Mhz
RFS Cablewave Systems FLC158/50J Flexwell 1-5/8"
Heliax, .110dB/100" Attenuation @ 30Mhz

If your group or club is interested in becoming a local MERIT
chapter, please contact us via email for more information.

look at the SGC powercube, 500 watts, i doubt whether anybody would notice the difference. There is a guy who advertises at the back of QST, he has ready made and kit HF amps 500watts and 1kw. There is not much on the market that is clean and legal!! The old Metron is still available secondhand but overpriced considering no spares are available. Most of the dedicated mobile 20 metre junkie want those and are willing too pay top dollar. The extra watts over a SGC power cube would never be noticed.

Hi, sorry I forgot to post it. On the other hand, as you'll see in the description, the "serial number" is kinda meaningless, since this radio's been heavily modified by the Drake staff.

The actual number on the back is 16466, but as you can see from the photos, it has the 5-position mode switch, and as a result of their work, EF184 (6EJ7) tubes.

Thanks for asking.

Neil

2874. Need TenTec 1208 Manual

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-11 00:00:00 UTC
From: David Little <dalite01@sprynet.com>
Message-ID: <8cv3gasbp1@slb6.atl.mindspring.net>
Source record: 81819
Cross-posted to: alt.ham-radio.marketplace,alt.ham-radio.vhf-uhf,rec.radio.amateur.equipment,rec.radio.amateur.misc

Hi,

I bought a Tentec 1208 Transverter from a tailgate hamfest the past weekend. It is a basket cast at this point, and the seller did not have the manual or assembly info. I need to strip it down and deflux it then rebuild it to trouble shoot it, and am looking for a kind soul to copy a manual. TenTech wants $10.00 for it, and that is certainly their right. At this point, I hate to put that into it additional to what I paid for it, as the chances of getting it cleaned up and in shape to check out are looking bad.....

Email replies please to dalite01@sprynet.com

Thanks,

David

Yep:

Trying to convert a Motorola High Range P200 to work in the 52.525 / 53.500 Mhz
Ham Band. No Problems on the Programming, however it seems that the P200
I have likes to roll off @ 52.400 Mhz. Anyone out there have the same problem?

Works and programs perfect up to the 52.000 Mhz Range.

Any way of making some Hardware changes to bring the VCO Tx Stearing voltage
aound within limits.

Any information would be helpful

Monty

It's now become obvious why so many folks have gone to Ebay. I for one don't like Ebay so I post here. Notice the post has an OBO on the end AL. Have you ever heard of "dickering" Al?
Some folks don't the like the price and that's ok. They make me an offer that seems reasonable.
If I like the offer, I sell. Is this ok with you AL? Or are you going to write me a citation for going $650 in a $625? Or was it $650 in a $729?

If anyone else is interested in these radios but doesn't like the asking price, send me an offer.
You just MIGHT be surprised!

73 Dan

2878. FS: AOR AR8000 Handheld Scanner

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-11 00:00:00 UTC
From: cozyoak@aol.com
Message-ID: <20000411091139.11828.00000812@ng-ca1.aol.com>
Source record: 81823

I have for sale probably one of the best handheld scanners ever made, the AOR AR8000. This one is in MINT condition cosmetically & electronically. Serial number of the radio is 014562. I had the original box but cannot find it now. If I can find it that will be included also. I'm the original owner. This radio has been used VERY little and has been well taken care of. Comes from a NON-smoking enviornment. Includes the AOR AR8000, The Original Owners Manual, Rubber Antenna, Belt Clip, Carrying Strap, 8 Rechargeable AA batteries & Power Supply. I will also be including a book from Grove Enterprises "Sports and Entertainment Frequencies by Bob Grove". I'm asking $400.00 plus shipping & insurance. If you have any questions I would be very happy to answer them.

<A HREF="http://members.aol.com/cozyoak/8000knob.jpg">
Click Here To See The AR8000 "Top Control Knobs"
</A>
<A HREF="http://members.aol.com/cozyoak/8000scrn.jpg">

</A>
<A HREF="http://members.aol.com/cozyoak/AR8000.jpg">
Click Here To See The AR8000 "Scanner & Accessories"
</A>

The AR8000 is a highly sensitive hand-held receiver boasting a very wide frequency coverage of 500KHz to 1900MHz without gaps. Step size is programmable in multiples of 50Hz for smooth tuning. The all mode reception provides AM,USB,LSB,CW,NFM and WFM. A custom manufactured ferrite bar aerial is neatly installed at the top of the receivers cabinet to enhance receive performance when listening to Medium Wave or Shortwave services. The highly visible LCD is a dot matrix format which enables many new facilities to be used, many of which have never been seen before especially on a hand held design. Two VFO frequencies may be displayed on the LCD simultaneously, one providing a stand-by frequency available for quick transfer. When frequencies are entered, ALPHANUMERIC comments may be stored along with frequency, mode & attenuator status simplifying the job or recalling and identifying memory channels. The LCD provides four lines of display so that additional information may be provided and displayed at the same time, these include a signal strength bar meter and a band-scope showing band occupancy. The AR8000 Has The Following Features Plus MANY More. "Backlit Keyboard and LCD Display for Easy Nighttime Operation", "2 Independent VFO's displayed simultaneously", "1000 Memory Channels with Alphanumeric tagging", "Band Scope - In VFO mod it will show activity five channel steps on either side of the center frequency", "Select Scan - Allows you to tag certain memory channels (up to 100 in any bank) to scan", "Delay Search/Scan - Receiver resumes scanning after a time limit (Programmable 0.1 - 9.9 seconds , Hold or Off)", "Audio Search/Scan - Allows you to set the radio to resume scanning when there is no modulation on a frequency", "Free Search - Stops scan on active channel for a programmed time

period (1 to 99 seconds)", "S-Level Search/Scan - Stops on a busy channel only when the S-meter is above a preset level (1 to 7 bars)", "Auto Store - Automatically writes active search frequencies into memory bank "J" (can be disabled)", "20 Programmable Search Banks", "Password Lockout - prevents unauthorized users form accessing 10 of your memory banks", "EEPROM Memory, requires no battery or capacitor", "Edit Mode - Allows quick editing of stored data", "Priority - Programmable Priority Feature", "New user and Expert Modes - Two levels of operation allow you to learn at your own pace", "Clone - Allows you to copy one AR8000 to another", "Full Computer Control - Allows you to control the radio via a PC (software & cable required)", "Auto Mode Select - Uses a bandplan to select the proper mode and step", "AM, FM, WFM, USB, LSB and CW receive modes", And many more features!

2880. Icom SP-3 speaker and other items FS

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-11 00:00:00 UTC
From: Ken Simpson <W8EK@fdt.net>
Message-ID: <dBFI4.1416$%L6.80158@monger.newsread.com>
Source record: 81825

Icom items For Sale:

Icom SP-3 speaker. This one matches most of the
Icom HF radios, including the 781,765,738,736,
728,707,820,821 H, R9000,R72,R100,R7000,
and R 8500. This particular unit has a couple
of light scratches, but seems to be in great
shape. No scratches at all on the front. $ 60

Icom HS-51 headset. This is a headset that
includes the headphone portion with a boom
mic. It is made to go with just about all of the
HTs Icom made, EXCEPT the W21 A, Z1AT,
and 2SRAT series. It includes PTT or VOX
operation. This one looks almost like new, and
works great. Only $ 55.

Icom CP-13 DC cord. Plugs into the cigarette
lighter and provides filtering for many Icom HTs.
This one works with the W 2 AT, 2SRA series,
X21AT, D1A, V21AT, 2GXAT, and others.
Like new for $ 19.

Rubber Duck antenna for any 2 meter HT with
BNC connector. This is a "stubby" duck, about
4 inches long, but performs much better than the
original. new $ 10

Prices do not include shipping from Florida.

Thanks.

73,

Ken, W8EK

Hello,
ii¿½ve got an fragment of an old General Coverage Communications Receiver named MONARCH HAM-1, also known as Lafayette HE-40 or KT-222 in kit form.

Iti¿½s a Single Conversion Superheterodyne with 5 Tubes, made in Japan and (maybe) sold as HAM-1 in England.

For restoration, i need additional informations, schematics or manuals as copy or scanned.

Thanks for help.

Well since it is just a plastic jumper shouldn't be to hard to test. The only concern might be your antenna. Since most are cut/made for 146mhz, transmitting at 155mhz might raise the SWR too high. The radio has a built in SWR protection so if you key up and the radio turns off you know the SWR is too high. Guess you could have two antenna and a switch.

2889. If I ever Shop at AES Again, It'll be a COLD day in HELL!

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-11 00:00:00 UTC
From: k8cpa@arrl.net
Message-ID: <38f37a06.3943962@netnews.att.net>
Source record: 81834

Boy, I'll tell ya one thing, ever sense the Owner and Founder of AES Passed on and left it in the hands of other, They're manners and willingness to help someone out. is to say the least terrible!

Here's the story.....

I am getting a Kenwood TS-950SDX with like 3 months use on it, It is 3 years old, it belonged to a personal and close freind of mine, who became a silent key, (Mark, N8OPK) (he become a silent key in November of 1997.) I am dealing with his 72 year old aunt, Who knows nothing about amateur radio or it's products, and knows little or nothing about shipping radios or the costs involved.

I call good ol' AES in cleveland, Ohio, and speak with a salesman, (I know his name, but I don't wanna get him fired, so We'll refrain from saying who he was...) All I wanted to know was, what the side of the radio was, the dementions (SP?)of the radio because I need to know, ballpark price on shipping the radio from Fl to Michigan, but he's TOO BUSY, I quote, "I'm too busy to bother with such stuff....." I mean, What the hell happened to businesses that were willing to help the potentional customers! for all he knew, I might have wanted to down the road somewhere, Buy an antenna or the matching external speaker for the radio! But I'll be darned if I'll EVER buy ANYTHING from them again. I mean, if AES Spent more time, Helping people, instead of making a god-damned sales pitch, they'd be doing something! I mean, the very MINUTE he asked me, "Oh, so you're NOT wanting to buy?" (quoted 100% too!) his whole personality and willingness to help someone out changed, is this where Amateur Radio is headed??? God I hope not. I bet if the "King of Traders" was still alive, He'd be firing some employees for that little stunt.

and to top it ALL off.... He had to NERVE to INSULT me, by saying..... My deal I'm getting on the radio was bad, by saying "yeah, $1500.00 is a good deal, if it works." What a JERK! I mean, and I suppose his $2500.00 Used Radio was a better deal that just came out of the service dept??? Yeah, right. From now on, I'm dealing of R & L Electronics and that's it, at least thier people are nice enough to answer question and not act like they're so damned "Holier than thou" and not even wanna help!

Ah, the heck with it, the sales Guy's name was AL. If he gets fired, too bad, maybe next time he'll be a bit nicer to people!

The only other concern is if you transmit on the 155 mhz frequency.
Is that radio type accepted to operate in the public service band or
only for amateur? You are a criminal if the answer is it is not
type accepted or approved to operate on 155 mhz.

What do you think the best 2-meter monoband handheld is? Also what would be your pick for a 2M/70cm handheld. This radio will be for a 11-yr old ham and needs to be about $230 or less. The ham who will be using the radio is very intelligent and won't have a problem with a complex user-interface. Thanks for any input.

-Andrew(KD7GLV)

$550 for a TS530?????!!!???? I'm curious why so much? I just sold a mint condition Icom IC-728 all band all mode solid state rig for $465. Unless the radio was purchased, then stored unsed for all these years and now being sold as such, I think your asking about $200 too much for the radio.

Hello,

I have Dual Band Collinear Base antennas up on a eBay Dutch Auction
for $59.95. These are 8' fiberglass antennas comparable to the Diamond
X200a. They have 6db gain on 2 meters and 8 db on 70cm.

The Auction ends 4/16 10:20 pm cst.

The listing is at:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=305249837

This is a Dutch auction, which means no worries about being outbid at
the last moment, or the price sky rocketing because of bidding wars.
You bid, you pay, you get one!

Be sure to check our other auctions and website for other great deals on
Amateur, Scanner, and CB, Antennas.

Thank you

AntennaWareHouse

Well, I feel obligated to reply with the expected "I think they're great!
cause..."

Actually, I have been buying exclusively from them since 1977 -- never had a
complaint or a reason to complain about them. They have the best catalogs,
always courteous (despite your incident, which I don't doubt, just saying I
never experienced anything like that nor heard of anyone else complaining
either), and have good prices.

In my book, they are the best AR outlet store we have in this country -- so
you may have a bad experience, it isn't gonna trash them out cause you have
dementia :) and think a retail store is going to help you with a shipping
problem that has nothing to do with them.

cheers

p.s.
Sorry, but I couldn't help but poke fun at your spelling --- seemed too
perfect.

I think sometimes people think that because they're selling amateur
gear they're somehow 'different' or in business for different reasons
than say Best Buy / Circuit City etc. I suspect he'd have had similar
responses from those two retail outlets.

Perhaps what really frosted AES though was when he called in for the
free information on their 1-800 number ;)

Yeah, don't waste your time with those AES guys. Just run over to Sears and ask them to give you a tape measure. Hey! They've got service trucks - have noe of them come over and measure the rig for you (for free, of course).

D-oh!

2910. Help: TS-430S QSY's by itself intermittently

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-12 00:00:00 UTC
From: Home User <homeuser@home.com>
Message-ID: <22QI4.150786$bm.591416@news1.alsv1.occa.home.com>
Source record: 81684

I now have a Kenwood TS-430S that I acquired from an Ebay auction. After I fixed several small problems such as no CW sidetone oscillator, RIT center, dirty controls, intermittent frequency display I am left with just one problem.

Randomly, sometimes even during a QSO, but around 2-5 times a day the radio will blank the display, emit around a 500hz tone from the speaker and change bands/frequency for a few seconds. Then it comes back by itself, but who knows where. If I didn't write down where I was in QSO I don't get back. :(

Any suggestions or ideas regarding the cause of this would be greatly appreciated.

73,
N6PRX - Marty

Waitaminute. You're pissed because "Al" won't do your legwork? Man, you got a pair of big hairy ones, no shit! Kenwood's site has the dementions (sic), and weight. UPS's site has a shipping calculator which will give you exact, not ballpark charges. I don't blame the guy either, I'd tell you to shove off too......TH

YUP, we are all now on record as NOT ever again shopping at:

1. AES
2. HRO
3. RS
And a pretty good cross-section of all the remaining dealers...

Looks like we'll have a healthy return to "building our own" - IF we
can find a reputable parts outlet...

--
Gary - KJ6Q

> Has any installed an Icom 2800 in an F150 regular cab truck?

> Thanks
> Brad KE0XS

I have several rigs installed in my F-150 regular cab.
I went with a "shelf-it." These are a steel shelf with sprayed on
fabric particles. It attaches where your visors do. If you desire
you can reattach your visors to the shelf-it. Shelf-it's run about $55.

I have been pretty happy with mine. I have 3 rigs attached above it
and one below.

2924. Yaseu FT-102 For Sale

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-12 00:00:00 UTC
From: elinger@sherwoodinv.com
Message-ID: <38f3eef5.355219398@news.quickconnection.net>
Source record: 81698

Yaseu FT-102 For Sale. Excellent Condition -- Like New. I still have the original box.

SSB filters and two extra narrow-band CW filters installed.

Includes matching Yaseu speaker and manuals (not in original box any more).
Original MH-1 microphone in box.

Works like new.

Delivers 180 watts with 3-6146s in final, but usually run at 100 to 125 watts.

Best offer accepted.

The FT-102 HF transceiver was top of the line for Yaesu at the beginning of the eighties and has a reputation of being a solid performer. It is a hybrid transceiver, all solid state circuitry except the final power amplifier (3 x 6146B) and driver (12BY7A) . It's better then average frequency response of both transmit and receive make it an excellent sounding rig. Also, it is one of the best receivers made in terms of dynamic range. It has plenty of controls, digital frequency display, two panel meters. It has almost everything you could ask for a rig except for computer control, memories and digital-age advantages.
The rig is in excellent operating condition and does not have any relay problems that are common with these radios. Cosmetically it is also in excellent condition.
I'm located in New Jersey.

Please contact me email: elinger@sherwoodinv.com or web site www.SherwoodInv.com

If you need it for proof of passing the code element, you can send a letter to the FCC records clerk with the details of your call, year of issue, address at the time, etc. It takes a little time, (for me it took about 3 weeks for them to respond) but they will respond with a confirmation letter of your license class held at that time.

From: Larry <lrm@infinet.com>
Message-ID: <38f3f6b1$0$25404@news.voyager.net>
Source record: 81703

we have a comm system using gm-300 xcvrs. Two of these are in very noisy environments in close proximity using horn speakers and having feedback problems. I want to mute both horn speakers when either radio is keyed. Is there a mute pin on the jack where the ext horn speaker is plugged into that can be connected to the other radio's horn speaker jack so that when either radio is keyed, both horn speakers would get a mute sig.
Thank You

I take it you've never been IN an AES store.
When I used to live in the Milwaukee area, I was up there quite a
bit. They were always busy, Salesmen on phone calls plus working the
counter.. Granted they could hire some additional counter help, but
then that $10k Hf rig would probably cost $3 more than someone else's
and you know where the customers go.

(I've watched one guy this week in another newsgroup all week,
running around for a $5 difference in a $650 mobile rig)

It does sound like he was somewhat rude, but you need to see his side
too.

He's tested for general and passed, but not received the new licence
yet.
The FCC lets you operate with the new privliges, until the new
licence arrives, if you use the designator. (aren't they nice guys?)

Since he said "soon to be" I assume he's like me, an upgrading tech
plus, who is waiting for the new rules to go into effect on the 15th.
We passed the tests, and now we have to go in on the 15th, hand them
the forms and another $6, and we can immediately operate with the new
licence class. As of the 15th, all licence classes will require ONLY
the 5wpm code. BTDT

I'm a "soon to be" /AE :) Just re-installed the 10m rig in the
car, and I have another commute coming up sunday evening. I don't
commute often, but it's a 12 hour drive when I do. A good opportunity
to play with APRS on 2m, and this trip, I can play on the whole 10m
band :) :) :)

Given the number of upgrades, I'd pay $5 for a picture of the
incoming mail pile on say wednesday next week. I bet it will be the
biggest pile of ham licence upgrades/issues they've ever seen!

2938. TS-520 Using 6146W 's ??? & Cheapest Source ??

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-12 00:00:00 UTC
From: chipster66@hotmail.com
Message-ID: <38f43b6f.558591@news.usol.com>
Source record: 81712
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.boatanchors

I've got a TS-520 that could use some new finals. I've found RF Parts to be about the cheapest at ~$15.00 each for 6146W's .. Is there any problems with using 6146W's in a TS-520 instead of 6146B's ? Seems there was some issue I heard regarding the 'W' series ages (late70's) ago? Also I wonder if that's about the cheapest source ?

Regards

Chip

2939. NEED: Yaesu FTS-12 CTSS Tone encoder/decoder board for FT-23R Handi

2940. I'll pay for a copy of a Regency scanner schematic !

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-12 00:00:00 UTC
From: theshearers@worldnet.att.net
Message-ID: <38F453C1.B3471FC@worldnet.att.net>
Source record: 81714

I'd like to get a schematic for a Regency ACT-R20/6.

This is an old 20 channel scanner with 6 bands,
crystal mixing, lots of jumper wires inside, etc.
I have figured out the mixing scheme. I'd like to
have a schematic for repairs, mods, etc.

Some technician in this newsgroup must have documents
for this radio or even one of the related series of
receivers. I'd appreciate it if someone could scan and
email me the schematic. Or I could send cash for a full
manual photocopy.

Are there any secret websites? I have searched but found
only owner manuals, no schematics.

Thanks
Tim (Please reply to group and direct)

Excellent news!. I hope the radio is priced reasonably.
I have the Motorola Talkabout 280 SLK family radios and the quality is decent.
I think Motorolla charges a premium for the name but I would be willing to pay
more
if I can justify the quality.
I think Motorolla actually makes a two meter handheld for the Ham market but
very few dealers sell it. I think it sells for $260.

VCO is out of lock. You will need the service manual and either
adjust the VCO back into lock or find the faulty component then finish
up with the adjustment.

Let me get this straight, You call a salesman at AES & essentially say,
"hey I bought a ham rig Somewhere ELSE, & I expect YOU to go find out weights
& shipping dimensions so that I can pay SOMEONE else to ship it to me. "I know
that your time is money but please go break open a box or search through your
files while I hang on to this phone on YOUR dime toll free # because "perhaps
down the road" I may want to buy an antenna or somthing fom your store
(perhaps!)." " I know that Kenwood the manufacturer is REally who I should
call for this information but I'm too cheap to dial a non-800 number ".
Then you have the nerve to call HIM an A-hole when he tells you he's
too busy to do your bidding??? You probably never had a job where your pay
was tied to your time & sales. Imagine someone calling a CHEVY Dealership &
saying, "
Mister salesman, I'm buying a car from SOMEONE ELSE but I want you to go look
up the part #'s for the fuel injectors & Tires and then go measure the battery.
I know you may loose some of your salary doing my footwork, but hey, you
never know, I may actually call your dealership back & order matching floor
mats for my car (perhaps). And besides..... If you don't do it I'm going to
tell everybody on the CHEVY newsgroup that YOU are an A-hole"...

TUBES AVAILABLE

I currently have over 300,000 tubes in stock. Have a good selection of both new and used/tested tubes for audio, CB & HAM radio, TV, CRT use.
Sorry I do not have a Web Site nor a price list. Suggest that you Email or Fax me with the tubes that you are looking for along with the quantify of each needed. I will check my inventory and advise you of current availability and cost.
In addition, I also have a very good selection of tube testers, tube caddies and good used CB/HAM equipment. Please contact me regarding your needs.
Thank you for your consideration.

From: Chevy <nospam@home.com>
Message-ID: <8d22dugdt1@nntp9.atl.mindspring.net>
Source record: 81728

About the 775's dsp for reference, when you compare it to the 756pro DSP,
if you belong to ARRL you can read the link below:
http://www.arrl.org/members-only/prodrev/pdf/pr9601.pdf

DSP for the 775 uses both audio and IF (15khz). I did not care for it's
operation in the 775, but the 756pro DSP operation was better than the 775,
like you said , because of the AGC tie in.

When I purchased my TS450 about 4 1/2 years ago and an AL-811H about 7 months ago I price shopped considerably. Texas Towers had a significantly lower price on both items. They treated me fairly and with respect. No complaints and I would buy from them again. I have a link to Texas Towers online store on my website on the Ham Radio Links page. 73 / DX

GOOD! Ham radio is nothing more than a cheap-ass old white
males hobby anyway in the USA. I just freakin love it when
I see full-page AD's dissappear from ham mags. Let all the
dealers go freakin out of business. Ham radios are built no
different from cheapo VCR's anyway. Anyone who would pay
more than $300 for ANY new piece of ham gear should have his
head examined. So keep droppin like flies you old tightwad
farts. I wanna see page-and-a-half long Obit's in QST.

2962. Equipment Opinions!

I am interested in buying ham equipment to cover as many of the ham bands as possible that are "General" authorized.

What is the consensus as far as equipment goes in that regard? I am really interested in the features on the Icom HF radios with the graphical display and their RTTY and CW decoder thing, built in antenna tuner, band spectrum display, etc. Do most people get a nice HF setup and do something different for VHF/UHF? Is there such a transcever that covers HF/VHF/UHF through 70cm? Would it be cheaper to get two nice separate radios?

Thoughts? Opinions?

Source record: 81739

Does anyone know a supplier or a mobile rack that would hold two or three small radios.. such as the police use in their vehicles? The only ones I've seen are those for police use and they are VERY expensive. I'd like to be able to house a dual-band xcvr; CB; possibly one of the small HF's like the 706; and if I had another druther, I'd like to have a platform for my minicomputer for the GPS.

As you may gather this is for RV'ing and I'd like all available between the seat and the pickup's console.

Thanks for any pointers.

Bill/N6GHG

Geez! Dwight, What did you ever do to these people to make them hate you
so much?
Did you sell porn pics of their daughters on the web?
Did you slash and burn the rain forest?
Did you:
Vote for Clinton?
Steal their food?
....transmit ....uh out of band?.....whooo

Both my rigs go out of band....miles out.
HF VHF UHF
Theirs do too, (if they know how to do it) ((they'll say " NEVER'))
We're too good for that.. yea right!
CB'ers at least do not have their noses in the air, and L regularly talk
on the 11 meter band with my ICOM...... so sue me.

2974. TS-430S WARC

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-12 00:00:00 UTC
From: CJ <cjr@visi.com>
Message-ID: <38F4CFFD.61F97BE4@visi.com>
Source record: 81748

I was checking out a TS-430S today and found that it would not transmit on either the 12 or the 17 meter band. It was OK on 30m, though. Was there some sort of mod that had to be performed to get them going on those bands? They might not have been available yet when the rig frist came out. The manual I was using certainly said nothing about it. It just listed those bands along with the others.

It just occurs to me that I'm not certain that it received on 12 and 17 either, but I think it did.

>
> Thoughts? Opinions?

Join a club. Be a guest operator in as many of the members shacks as you can. Bells and whistles are fine but if you cannot hear them, you cannot work them. You'll find that a good receiver and a good antenna are the most important elements of your station. I'm not familiar with the performance of the new DC to Daylight type machines, I only have a handheld for VHF/UHF and a conventional HF rig. Some of the guys'n gals here can tell you about those. Good luck and thanks to the FCC for letting us look forward to April 15th for a change :)

Gene
N4JEE, Original Technician, soon to be General/lite :)

I've dealt with the HRO new hampshire store, both on the phone and in
person, and I've been quite satisfied. I've seen a number of
complaints about HRO on the newsgroup, and heard bad comments from
friends, but I've never seen any directed at the New Hampshire store,
only the others. FWIW, the New Hampshire store is supposedly the
processing location for all internet orders, as well, though I've
never ordered using their web page.

Amateur Electronic Supply. If nothing else, you should request their
paper catalog. It's full color -- 150 pages, issued quarterly, free.
The best ham shopping book going right now.

AES has always done well by me, whatever I've ordered from them.

Also, keep in mind, there is no ham dealer in existence that does not
get slammed every now and then on this news group. Take all such
complaints with a grain of salt :-))

I've been dealing mail order for years and Texas Towers is hard to
beat. Equally important however is the individual salesman at the
dealer. At the local ham shop here, there are individuals I enjoy
dealing with and others I wouldn't give the time of day to.

I am about ready to buy a trunking scanner, such as the BC-245,
and a new handheld radio, such as the Yaesu VX-5R. What is
holding me back is that the new equipment is usually announced
at Dayton. But this year there has been little talk of any new equipment.

Am I safe to go ahead and buy these two radios??

A friend of mine give me a Yaesu FT-240 Hand Held 144.
The problem is that I have no manuals, operation or service.
On power on it stays 145.500, VFO A, L, S.
Does not respond to keyboard nor tune control.
Only volume and squelch.
It transmits and receives in that unique and particular frequency.
I have disconnected the Lithium battery during a day trying to unblock
the processor without any success.
Any ideas?
Any manuals ?
Where can I get information about this particular model?

Is a catillion a party for felines? I never heard of it before your posting.
I think you mean cotillion or in plain words, a fancy dance party and how
that relates to a hamfest is beyond me unless that city is known for it's
swanky swingers and humdingers.

Unfortunatly for 11 meters. I used to use an HR2510, but it is since long gone. I have an occasion where I need to use the CB band. I really don't want to install yet another radio in my jeep. I would much rather have a radio with a bit more flexibility and the 10meter rigs are usually much better (and compact) than the CB's.

CJ
Its been quite a while since I had a 430 but it will work on the WARC bands. How to make it do so is in the manual. I think it was as simple as clipping one diode or jumper and maybe doing a CPU reset. If you have the Kenwood manual it is in there.

Hi Teresa...You might want to call the W5YI group in Dallas, 817-461-6443 and see if they can recommend someone trustworthy. Be careful who you deal with as there are many dishonest hams in the world.

Good Luck,

Ted, WH6MC, Oceanside, CA.

I second Gene's comments. I'd been interested in getting my license since I was 12, but didn't actually get it until I hooked up with a local club last fall (35 years later!). The club members were helpful with many things, including choosing a rig. They'll also provide you with knowledge regarding the local repeaters and band usage.

I eventually decided to get the ICOM 746 and I'm very happy with it. It covers all the bands from 160 to 2 meters and has a general coverage receiver.

I'm not sure, but I think the 6146W is more equivant to the 6146A than the 6146B. The difference here would be in the heater ratings and the plate dissipation rating. I don't think the TS-520 would push the tube ratings though. Worst case you will have to re-neutralize the finals and reset the bias to get the desired resting current.

Message-ID: <sfai6uraaln30@corp.supernews.com>
Source record: 81781

Anybody have any suggestions what might be wrong with one that doesn't fully charge a good battery? Do not have any technical data on it so if you have tech data/schematic I would really appreciate it. Or if you know where I could get tech data or assistance that will be great too. Selecting the different switches tha the battery comes in contact with makes only a slight difference - charging voltage will go up to about 7.6V and current rate starts at about 10ma and will go to about 14ma. Not exactly mind boggling is it!

Any replies will be greatly appreciated. If you respond to me directly, make sure you take out the "nospam" in my return address.

Hi,
6146W is made for military where Vibration is the problem. It has less plate dissipation compared to 6146B but will work fine for TS520 transceiver and puts out same 100W without any problem. Any new tube installation will require some sort of re-neutralization adjustment for 10 meter band. FYI, 6146A is made with dark heater filament which will work better under less than 6.3V rated voltage to the filament.
Good luck.

The BC780XLT is not a handheld unit. It is designed as a mobile unit. Will it take a battery pack? Still, it will do more that the BC245 and has some aphanumerics.

The VX-5R is a pretty poor HT. The old FT50RD is a better choice, though not much cheaper. The VX-5R CTCSS is unusable. The metal case makes the unit too hot to handle. It has other problems as well.

Hi All,

I have the following for sale,

1 UHF GP300, model number P94YPC20D2AA, expanded to 16 channels, with battery. The unit operates into the mid 470 range, but I am unsure of the exact split. Looking for $300.00 plus shipping, or best offer.

1 110 watt VHF Syntor X, model number T83VBJ7xx4AK, currently in the mid 150 to low 160 range. The unit has the mounting tray and the EEPROM module. I have no accessoires for the unit. Looking for $75.00 plus shipping

2 Motorola MX series quick chargers, model number NLN8858, in like new condition. Looking for $40.00 each plus shipping, or best offer.

1 MX charger to Saber charger adapter sleeve, part number NTN5564B. I am looking for $40.00 plus shipping, or best offer.

I also have one VHF 120 watt RF PA, amp made by HENRY. The unit accepts between 5 and 30 watts for 120 watts, continuous (if a fan is used) out. I have all the docs for this unit. Looking for $150.00 plus shipping, or best offer.

I also have access to 2 to 3 High power, 146 to 174 split Saber 3, full keypad and display, like new, just rehabed at the big M. Looking for $600.00 each plus shipping, or best offer.

Please respond via e-mail.
Thanx
Mike

P.S. Would consider trading for Pico Packet TNC with GPS input, or similar unit.

3016. Larsen Window Mount Question

I just bought a Saturn Wagon which is practially all plastic. I decided the best way to put an antenna on the car was to go with a Larson 5/8 wave glass mount.

The problem is, the best place to put the antenna is slightly tinted. Has anyone else solved a problem like this? Has anyone else found a better solution for a Saturn Wagon?

Any help would be greatly appreciated by me, as well as all the other Hams who have to listen to my scritcy scratchy transmissions!

Email would be appreciated:

rsmith@sdsu.edu

Thanks!

Rebecca

/AG means he's passed the general class exam, and operating under
those privliges, while waiting for his paperwork to come back. It's a
nice thing that the FCC allows us
to do that, instead of having to wait while they push paper.

You can select wether you want to keep your old call (I will) or take
a new one. They assign the calls more or less sequentially, and
there's a "vanity call" program, so all the cute ones are usually
gone.

GOOD FOR YOU, Chuck!

People just LOVE to scream bloody murder when they think they have been wronged for some reason or another...but the vast majority of those who are PLEASED with their equipment-buying experiences just stay quiet and enjoy the hobby...<g>

Anyway, try the fine folks at Ham Radio Outlet in Anaheim, CA. Their telephone numbers and pricing are available at::

http://www.hamstore.com

I have been purchasing products large and small from them since 1994, and have never been disappointed with the crew there.

3021. Re: SGC SG-235 compared to Screwdriver

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-13 00:00:00 UTC
From: bshort@speedchoice.com
Message-ID: <MPG.135f66748eee1967989817@news.speedchoice.com>
Source record: 81555
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

Murray and all,

I never used the SGC-235 with a whip type antenna or mobile.

It was used with a long sloping wire over elevated radials
with an SGC cube amplifier (500w).

I do use a SGC-231 100w 160-6m tuner in my pickup with a
standard "CB" type whip. It works 80-6 automatically. As
I rarely use HF on the go (occasionally on 10m or 17m) I
can't compare it to a Screwdriver type antenna.

We will soon have electricity at our desert property, so I
am switching to a 1kw+ tube amplifier (as Murray knows) for
weekend contests. This is why I first sold my "cube" and now
the SGC-235.

By the way, the SGC-235 is spoken for, just awaiting $$$ and
I will be sending it out.

The SGC tuners are reversible L-network type tuners though
automated by the microprocessor.

Hope that helps a little.

73, Brian

Oh, that's it. Now you've done it. Prepare to be disgraced, flogged,
and shot, at dawn. We can't have any of that radical nonsense in this
newsgroup. This newsgroup is for intellegent, rightious, people to
discuss the seriously important issues facing the ham radio community.

No, honestly people, I don't use my radio in the CB band. As I have
already said, I have an old cobra radio for that. My ham radio has the
MARS/CAP modification to allow it to be used on the VHF marine band in
connection with my activities with the USCGA, but that is as far as it
goes when it comes to out-of-bands activity.

Dear Chuck:
Here's another side of the story. I'm posting this each place where I find your original message. So far, this includes rec.radio.amateur.equipment and rec.radio.cb (where you compared AES to Copper Electronics--what a stretch!).

>From: k8cpa@arrl.net (Chuck K8CPA)
>Date: 4/11/2000 3:45 PM Eastern Daylight Time

>I am dealing with his 72 year old aunt, Who knows nothing
>>about amateur radio or it's products, and knows little or nothing
>>about shipping radios or the costs involved.
[and]
> All I wanted to know was, what the side of the
>>radio was, the dementions (SP?)of the radio because I need to know,
>>ballpark price on shipping the radio from Fl to Michigan, but he's TOO
>>BUSY, I quote, "I'm too busy to bother with such stuff....." I mean,
>>What the hell happened to businesses that were willing to help the
>>potentional customers!

I side with AES on this one. As a business person, I depend upon a steady stream of orders pouring in to pay my operating costs. Customer Service is a necessary overhead item. We reserve it for actual customers. We are not the public library, existing to furnish information as a public service.

Meanwhile, if you are getting this radio at such a bargin, who the heck cares how much the shipping cost will be? Is there a point at which you will NOT accept the radio? I don't think so!

In addition, someone at Mark's Aunt's end is going to take the radio to a shipping facility. Ask that individual to put a measuring tape on the radio, if this is so important to you. And one hint (since you apparently do not get involved in the shipping process very often), ask them to WEIGH the radio. You seem to be ignoring weight as a factor.

The bottom line: You went to an inappropriate source for information, when other sources were avalable and in a situation where it probably didn't matter, anyway.

As a long-time AES customer, I am pleased that "Al" took this position. When I call to place or trace an order, I like knowning that those answering the phone will not be tied up researching insignificant information for non-buyers.

Rest easy.....I'm confident that Al won't be fired. In fact, it's probably the opposite. If he worked for me and had complied with your request, I'd be having a serious talk with him about how he spends his time at work.

3029. Re: Icom IC-756 Concerns

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-13 00:00:00 UTC
From: Al Robinson <robinsona@rl.af.mil>
Message-ID: <38F5B861.235A5A10@rl.af.mil>
Source record: 81563

Andrew:

I've owned a 756 for 2-1/2 years now and enjoy it very much. Only gripe is, I would like to see an adjustable noise blanker rather than just on/off. In fact, mine will sometimes clip out the audio during quiet conditions. Don't know if that is a problem with just my rig or if all are that way. The solution.....I only turn on the NB when there are static crashes.

OK, another small nitpik.....can't store PL tones in memory for six meter repeaters.

Other comments:
Spectrum scope.....love it
Dual passband tuning.....works great
AutoTuner.....works great
DSP.....another fine feature
2 steps of pre-amp and 3 steps of attenuation are very nice

Al, W2JUV

>The VX-5R is a pretty poor HT. The old FT50RD is a better choice, though not >much cheaper. The VX-5R CTCSS is unusable. The metal case makes the unit too hot to handle. It has other problems as well.<
>"gariac"<

My present HT is the VX-5R and I would rate it a 4 on a 1-5 scale. Yes the case does get hot, but with the vinyl case never too hot to handle. Keep in mind the case is constructed of die-cast aluminum which works great for disipating heat. The CTCSS works just fine and the ION Lithium batteries are fantastic. The Mars modification was easily performed without having to split the case through an opening behind the battery pack. It requires removing a solder bridge.

As far as other problems I haven't experienced any. As with any wide band radio once you get outside vhf/uhf amateur bands the sensitivity varies.

Eight-digit alpha-numberics are nice along with the 220 memories.

I would suggest going to the following URL and checking out the various reviews.
http://www.eham.net/

There's no better substitute than going down and making side by side comparisons or finding an amateur who owns one nearby. That's what I did at the Orlando AES while on "spring break."

From: k5dh@raytheon.com
Message-ID: <pHjJ4.46$lZ5.4744@bos-service2.ext.raytheon.com>
Source record: 81569

Over the 24 years that I've been a ham, I've had consistently good service and pricing from both AES and HRO, regardless of the recent rash of "bashing" that both stores have received here on-line. HRO also offers free UPS shipping on orders over $100, which has saved me a lot of money over the years (my most recent purchase, an Alinco EDX-2 antenna tuner, was from HRO... $20 cheaper than AES and didn't have to pay what would have been about $10 shipping charges either). I've had one bad experience with R & L (won't deal with them again!). Texas Towers has consistently good prices, but I don't care for the sales peoples' attitude when dealing with them face-to-face (and I hate paying local 8.25% sales tax); that would not keep me from doing biz with them by mail or phone if I lived elsewhere, however.

There are many other dealers who've been in business literally for decades, and although I haven't done biz with them, you can bet they haven't remained in biz that long by cheating customers or offering bad service.

This is a mechanical problem hopefully someone can help me with. I just purchased a MT-3000A. It arrived with the two "plastic push buttons" for the wattmeter selection switch's, floating around loose in the box. I can't figure out how to secure them to the two small plastic shaft's protruding through the front panel. Floating loose also were two small rectangular (1/2"x3/8") plastic pieces with open slots in them. They look like small window frames. The plastic push buttons each have two spring loaded legs on them and these legs appear to fit into the small plastic frames. I tried to install these assy's on the shafts protruding through the front panel but do not see any way for them to stay on the shafts. Can anyone help me ? The manual is not illustrated and I'm a mechanical midget. Is there a Dentron reflector perhaps ? Any help would be appreciated.

Thanks,
Van W0NZV

AH, GEEZ. Give me a BREAK.

If you can't convert metric to inches, you will have
trouble pouring piss out of the average boot.

Are you a no-code Extra candidate, by any chance?

All they guy had to do was look on Page 72 of the AES Catalog and the
"dementions" (dimensions) are given for the TS-950.

I've been in Michigan Radio, and treated fairly AND poorly - I've been in R & L, and had good vibes AND bad ones - I've been in AES-Wickliffe and been blessed with good luck AND spurned by the counter help...I guess it depends on the moon phase and which way the wind blows on the day you intend to do business with WHOEVER you call...

The best thing to do is be VERY sure about what you want when you call...that way you don't look like the typical fool when the sales-person picks up the phone, or waits on you at the counter...I know they should be happy to have customers; I also know the typical ham isn't the best of customers, and salespeople can get cranky VERY easily...

Actually it appears that the HF 10-20 may be a converter or
preselector. It has 3 bands- 10, 15 and 20 meters. 2 of the tubes
won't light up and I had this problem many years ago but I can't find
the manual any more. If you can be of any help please e-mail me.
Thanks.

3050. Icom Q7 Disassembly/modification/commentary

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-13 00:00:00 UTC
From: tmelcon@mit.edu
Message-ID: <8d4ufjbtv1@decurion.mit.edu>
Source record: 81584

Having recently disassembled my Icom Q7 (model number starting with 04), I found some things which differed from the documentation I had previously seen on Usenet and the web. I thought I would therefore make some comments as to the nature of the differences I encountered. Note that the following is written based solely on my experience, and I have not read a service manual for the radio.

First remove the knob (it pulls straight off) and the antenna. Next unscrew the knob ferrule (which is easy) and the SMA ferrule (which is not). Be careful not to damage the threads of the SMA connector while unscrewing the ferrule; if you aren't using the correct tool this is likely to happen.

Put the radio face-down and take out the batteries. Remove the two screws in the battery compartment and take off the back cover; lift it up at the bottom to take it off. You will see two boards, a half-height board which is the RF board and a full-height board with the speaker attached which is the logic board. To remove the RF board, one must remove the screw on the right and desolder the shield in several locations. One of these is in the lower-left, one is in the upper left, and one is a long solder connection on the upper right. This last was not mentioned in the existing procedures.

Additionally, one *must* desolder the three connections from the SMA connector, which was previously described as being optional. That's a total of five places you need to desolder. It's rather a pain, at least for those of us with no better tools than desoldering braid.

The RF board can then be easily removed. Removal of the logic board simply requires one to take out the screws holding it in the case, and to pull it out carefully so as not to tear the rubber gasket. After you desolder the speaker connection, of course.

Of course, if you don't need to remove the logic board to access the front side, you will not need to remove the knob or SMA ferrule, and I suggest that you don't.

To perform the modification (the one I performed, anyway), locate the speaker/mic connector on the logic board. There are two pins on the top of the connector and two on the bottom. Of the two on the top, one will be copper colored. This one is ground. The other one is the "microphone" part of the connector. Trace this pin around to the side of the connector, and see where it goes in and contacts the plug. With a small screwdriver, bend this back as far as possible.

Your radio will now accept standard earphones and function correctly with computer programming as well. You won't be able to use a speaker mic, but I can't understand wanting to use one on a radio that small anyway.

I must say that I thoroughly disapprove of Icom for doing all of the following:

1. Using a connector which cannot accept any standard sort of plug
2. Making the radio too stupid to disable the microphone if it is shorted to ground when the radio is turned on, like Yaesu does
3. Not including an adaptor *with* the radio.

Presumably this is due not to incompetence, as the radio seems to otherwise be an extremely intelligent design, but to a desire to make more money selling the ridiculously overpriced adaptors (just as the deliberate crippling of the Q7's receive range is due to a desire to make money selling the R2). This is not the way to get brand loyalty, Icom.

>just listed those bands along with the others.

The TS-430s came out before the WARC bands were legal in the US. It was
designed to transmit on them after cliping a few wires. The instruction
manual tells you how do to it.

It is possible that when they bands became leagal, kenwood automaticaly
enabled them and dropped the comments from the manual.

See if you can find a copy of the original manual.

>It just occurs to me that I'm not certain that it received on 12 and 17
>either, but I think it did.

It should. The receiver covered 150kHz to 30mHz. Note that out of the box
it had one filter (ssb-wide) and no FM. Additional AM filters SSB narrow
and CW narrow filters were available and must be soldered in place.

Another problem is that TS-403s' stored or used in damp places tend to
loose the receive sensitiviy on bands you don't transmit on. This can be
fixed and is described in an Amateur Service Bulletin you can download
from kenwood's web site.

> ssb ok? Thanks Murray

Dunno, seems like expensive impedance matching for a screwdriver.
Getting the loading coil above the roof when using a motor home can make
a difference. But mileage may vary. An elevated coil improves the
current distribution though the whip. All short whips have maximum
current at the base, but a center mounted coil will improve the
distribution up to the coil level. You will have more radiation from
that level on the whip with a center loading coil, rather than a base
loading coil. If you have metal next to the whip for most of the way up,
having the coil above the roof a bit can help. How much?, dunno , would
have to test. But, if you don't mind the price, I guess the sgc would be
a bangup matcher. But, I would still want loading coils in the antenna
to resonate. I wouldn't try using an sgc with just a whip alone. It'll
work, but not as good as using a loaded antenna. This would be no
problem with a screwdriver. MK

Yep, Even with the lower plate dissapation, a 6146A will still work
fine. It's still head and shoulders over a "sweep tube" more-n-likely.
Or at least the 6JB6's they use in drakes. Any 6146 should be ok. I've
used 6146A's in my 830 before, and saw no real difference between a "B".
The original TS-520 was designed to use the "A" tube. The later models
used "b"'s. MK

>
> Thoughts? Opinions?

I always prefer seperate rigs for HF and VHF. That way I can listen to both at the same time. Also when you start cramming DC-light features into a rig, something will suffer along the way. HF performance will likely be a little short from a HF only rig, and the same for VHF comparing to a VHF radio only. IE: intermod specs etc. But for many people these may not be real problems. If I was going to buy a dc-light rig right now, it would prabably be the IC-706 mk2 G. Pretty decent little rig, for a do it all unit. But in the real world that "I" live in, I would rather buy a seperate HF mobile, and get a VHF rig seperate. For the price of the 706, I would probably get something like a TS 850, 570, or something. Much more HF goodies, but no VHF. I already have a VHF radio, and also a Dual band HT, so I don't need any more of those, unless an all mode. For a do it all rig, I don't think you can go wrong with a 706 mk2G if you do decide on that route. MK

3060. Icom BC-79 charger - need tech data or suggestions

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-13 00:00:00 UTC
From: Mikie <galaxynospam@inet2000.com>
Message-ID: <sfc6u2bialn63@corp.supernews.com>
Source record: 81594

Anybody have any suggestions what might be wrong with one that doesn't fully charge a good battery? Do not have any technical data on it so if you have tech data/schematic I would really appreciate it. Or if you know where I could get tech data or assistance that will be great too. Selecting the different switches tha the battery comes in contact with makes only a slight difference - charging voltage will go up to about 7.6V and current rate starts at about 10ma and will go to about 14ma. Not exactly mind boggling is it!

Any replies will be greatly appreciated. If you respond to me directly, make sure you take out the "nospam" in my return address.

>73's and can't wait for Dayton, Tim

Back in the mid 70s Motorola used to see a version of it's Triton
marine VHF radio as a ham rig: called the "Metrum II". 2 different
versions, one 1 or 10 watt, other version 1 or 25 watt. Thing was
built like a tank, had a great receiver (mine tested 0.17 microvolt
for 20 db sinad), and it was built like a tank (and water-resistant on
top of it).

If the new HF radio is 1/10 as well built as the Metrum, they should
have a winner. The Metrum was a damn good radio (still have mine from
the old days which has not been fired up in 20 years) but was
overpriced compared to the Regency and other junk 2M radios available
in those days.

Teresa, if you will email me what the equipment is that you have for
sale I will be glad to help you get an honest dollar amount for what
you have. I, along with several others on the rec.radio.swap pages do
lots of buying selling and trading, and can give you some Idea what
your equipment is worth. I have always made it a policy not to get
involved in estate sales because there will always be hams that say
you are selling the equipment too high, or selling too low.
I also have the email addresses of some hams in Texas that will help
you also.
I will not buy any of your equipment but will be happy to assist you
any way I can to get you a fair price on your equipment.

3070. 10 Meter Mobile Ant

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-13 00:00:00 UTC
From: Mike <michaelj@networktel.net>
Message-ID: <gyrJ4.244$xZ2.73615@news1.atlantic.net>
Source record: 81604
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment

I am looking for observations on what 10 meter mobile ant you feel has done the best job for you. My wife presented me with a RS HTX-10 ten Meter Mobile transceiver for my birthday. I installed it this morning using a 10-11 meter mag mount. I cut it and have it at an almost perfect 1:1 swr in the range I want to use it on. I have talked to many folks from my Base Station on 10 meters who were using this same RS Radio and have been impressed with the signals I have received.. I made several contacts with it today but nothing compared to the reports I have been getting from fellow HTX-10 users.

To test out the rig, I hooked it to my base ant (3 element beam) and found the 25 watts thru this ant to do a great job. I know the radio is doing the job. I am guessing the ANT needs improving. (mobile)

Anyone running 10 meters mobile, I would like to get your comments on the ANT you are using. I would also like to know what filters you may be using to cancel out alternator noise. I installed a 20 amp RS filter and it has done nothing. The alternator noise is livable but I would like to reduce it as best I can.

Sorry for the long winded post but any comments and help would be highly appreciated!

Thanks
Mike

Locate a service manual for the radio which this is used with and most likely you will find the info on the charger included. By the way, which is it?

Mike, I have operated 10m mobile for years. I always use a fiberglass marine CB antenna on my truck or car. I tried a Larson 2m/10m mag mount, but always go back to the fiberglass whip. While not as good as the antenna system on my boat, it works quite well. Since you cannot put up a yagi on your car you will have to suffer with a solid or loaded vertical. Good luck!

After watching the piece on amateur radio on the abc news
last night I wonder how many of you actually care what
happens. All I ever see is code no code slams one way or the
other instead of congrats on giving someone a helping hand.
After the pirate attack on that boat that kid could have
died, it did not matter if the guy's who helped on the
maritime mobile net knew cw or not. Also, 2 years ago when
southern Minnesota was torn up but tornados in early March
many tech class hams helped (taking time off work without
pay) to support communications out of the spots that needed
it. Why don't you guy's get a clue, it isn't the fact that
someone took this or that test, it's the reason for the
amateur service, to help in emergencies, the hobby part is
just the added fun.
Mark (tech + and don't know if I want to bother with hf,

Mike,
To start with, always 'load the dice' in your favor.
That means tune the antenna, mount it in the 'best' place
you can (center of roof if possible), run all the power
you can. Sounds like you've done the tuning and are
probably running all the radio will do. That leaves try
placing the antenna in the center of the roof, if you can,
and/or try the 'best' compromise location that you can
talk the wife into. If you try all that, then your doing
as good as your probably going to. If this isn't as 'good'
as some of the people you've talked to, then thats the
difference in propagation, location, and honesty(?)
between you and them. (not unusual)
'Doc

David, and everyone who has given great advice,

The engine noise is from the ant. With the ant disconnected, there is no engine noise. With the engine running and the ant connected, it is a whirring sound that increases with engine RPM. I had pretty much ruled out noise from the power source as it is wired directly to the battery with a very short run of good quality wire and is shielded to the connection to the radio itself.

The vehicle is a 99 Chevy Tahoe. It is my understanding from several other Hams with Tahoe's is they are pretty noise free in regards to fuel pump and alternator noise. If I stay with the mag mount, any suggestions for reducing the apparent engine noise?

I have had someone suggest the Hustler MO2 with the 10 meter RM-10-S Resonator. Anyone have any experience with this? From the specs I see on their website, it may fit the bill.

Thanks
Mike

I have heard the Motorola will soon enter the amateur market with a version
of their DSP HF rig, originally designed for the commercial/military market.
It would be nice to have some more competition for the big 3.

Rebecca,

You may want to ask one of the service people about the type of tinting used in the glass. In my case (1998 Dodge Durango), I was told that almost all factory tinted glass uses non-metallic dye. This means that there is a very good chance that a through-glass antenna would work fine on your car, as it does for me.

CTCSS works fine on the VX-5R. The repeater I use has CTCSS access,
and I have no trouble accessing it with the VX-5R. The metal case is the
heatsink for the radio. If it gets too hot to handle, it is telling you to shut your
yap and let the other fellow talk for a while. You probably timed out the repeater
several minutes ago anyway.

Actually, if you read the fine print in Motorola's software legal mumbo, it refers to reverse-engineering either the software or the hardware on their radios.

There really isn't anything they can do to you for writing your own software other than bury you alive in legal costs.

Not necessarily. It may just mean that current models
are adequately addressing market demand. In other
words, there's no reason to bring out a new model if
the old model is still selling well.

>Is there anything, handheld, that will replace these
>two units? Anything at all in the pipeline??

Rumor has it that Motorola is returning to the ham
market. If so, we can expect a bulletproof radio which
doesn't try to be a DC to daylight noise box. I'd be
delighted with a new radio that had stout helical
filtering in the front end which would stop cold any
signal from outside the ham bands getting into the
radio.

Hi Mike,

For 10 mtr mobile ops, try a quarter wave, stainless steel whip, which is 234 / f (MHz). These are the most efficient. Just don't mount it on your bumper. Mount it as high on your vehicle as possible and on a heavy duty commercial mount. I feel the next best antenna type is a longer, top-loaded, fiberglass helical whip from the CB market, such as the firestik 5 or 7 footers. The top loading can be unwound a few turns to raise the resonant frequency into the 10 mtr ham band. They work quite well... been using an older, 10 mtr modified, 5 ft firestik since before the peak of the last cycle. Just mount them high and in the clear, and provide a good vehicle ground. Good DX'ing.

On power, get it directly from you vehicle battery, and consider the cable routing seriously, avoiding noise producing items under the hood. Using the battery as your direct source of power is your best bet as a first step. Consult mobile installation articles, hints and kinks, etc., for further remedies and enhancements.

I use the Deluxe Mag Mount antenna from RS. I see in the
catalog they mark almost all the other CB antennas as '10M'
but that one, but the bottom line is it is the best for low power
10M work.

The high power antenna is good too, but look at the lengths.
You're not running high power so that big open coil is not much
of an advantage over any other quality coil. And with an
antenna that is shorter than 1/4 wavelength, the shorter the
whip, the more reactive the coil, and the narrower the bandwidth
for best performance. Longer really is better. And the 'Deluxe'
antenna, while not as 'snazzy' and that thing with the big open
coil, really is better. Now if you were running a can on the rig...

That said, I use the Deluxe, and I've talked all over the place with
my HTX-100. One morning, when the rig was new, I broke in
on a conversation with low power (knob pulled for 5w). One
guy was in the old East Germany, the other guy was just outside
Moscow. They were talking in english as that was their only
common language. I spent probably 20 minutes or so chatting in
a 3-way and only had to go high power when I pulled into the
parking lot. They were both fascinated that I was both QRP and
mobile. I've also had lots of contacts to europe with the rig when
I was leaving it in the car for the commute.

I never had much luck to the west though. But east over the ocean
always seemed to be fantastic.

As to your alternator noise, you might have a problem if it's really
that bad. You don't say what vehicle, how old, battery condition,
or any other info. But I will say that with modern cars a lot of them
use the computer to control the alternator now, it's no longer just
high/low charge rate. Batteries last a lot longer, and the noise should
be minimal. If not, then you could have a blown diode in the pack
in the alternator, or you could have a bad cell in the battery causing
the system to constantly try to compensate. I'd fix the problem if
possible, not try to mask it as a solution.

http://www.homestead.com/brub/HamRadio.html

Heathkit SB 220

80 - 10 No WARC 2KW
Pair of 3-500Z

Price $395

Come with original Manual
Unit works fine. It's been replaced with an new amp that covers 160

Unit has not been modified.
It has some marks but no dents.
It's currently wired for 220 volts

Bob

i have used the wilson line of 10/11 meter antennae for years
with xcellent results. i am impressed with their ruggedness.
the wilson 1000 center load finds itself on my truck at
the hf location when not occupied by my proam 17m whip.

the wilson siver load series are very nice for a shortened
fiberglass type whip.

the wilson 500 is a very nice mag mount choice.

I think that if you're able to pass the test to become a ham you shouldn't have any trouble converting mm to inches and back.

This is basic knowledge for most. When Europeans travel to the US they are not complaining about speedlimits in miles instead of Km nor do they not know that 1 gallon is 3.8 liter... and the prices are in dollars.. that helps us Europeans a lot... :-)

In short... it helps to think and do some research for yourself before complaining.

As for the original complaint about AES... I visited their Milwauki, Orlando and Las Vegas shops in the past and will shop there again when I'm in the neighbourhood. On occasion the salesman even save me a few bucks ..

Of course I was a paying customer and not taking their time for free advice...

If the antenna has the large external silver coil at the base,
it's the same one I'm using. Overall, I like the antenna, particularly
since I can get a reasonable match from one end of 10m to the other
(most mobile 10m antennas don't give you a usable match at both the cw
end of the band and the FM end--you have to tune for the portion you
use most often (probably either 28.300-28.800 or 29.500-29.700,
depending on your interests--since the RS rig doesn't have provision
for a key).

With the particular antenna you're using (assuming it's the
same one I have), you may find the overall match is better if you tune
for an optimum match a little below the middle of the band--i.e.,
around 28.800. For some reason, the antenna seems to perform better at
the high end of the band normally, so the swr drops a little slower in
that direction; instead of being a pure sine curve there's a bit of a
skew. Besides, since the rig doesn't have ctcss tones available, you
probably won't be able to make as much use of the FM end of the
spectrum as you will the SSB end.

>Do you use the RS 10 meter radio if you do, how do you find the receiver?

Same rig. The receiver isn't bad, but I'm a "bit" spoiled by
the FT-920 I use in the shack, so I probably would rate it lower than
others might. In comparison to an FT-100 or an Icom 706MkIIg, it's
pretty weak--but then again it only costs 10% as much as those rigs.
Overall, I've been satisfied with the sound quality--particularly with
an external speaker--and the ease of tuning precisely while driving.
Unlike a lot of "mobile" rigs, the RS model really _is_ made for use
while in motion instead of only while parked.

Well, not only is ARRL guaranteeing free passes for clubs (screw the individual ham, and screw the schools and colleges where the new hams they want so badly [not] are found), but Icom is giving away ONE IC-746 to the club that does the best job of promoting ham radio.

What is it with the ARRL, that anything they stick their filthy hands in ends up being done through a club ? Any one want to wager on whether ARRL has aranged it so that rig will go to an ARRL affiliated club ? After all, if a club doesn't pay homage to ARRL, it's no good, is it ?

Have you ever been to a ham club meeting ? I know MANY of you have made comments to me over the years about what a nice CLEAN, NEAT group of men and WOMEN attend these meetings. There is never the faintest aroma of CIGARETTE SMOKE on any of their business suits. Which is amazing since so many arrive from their jobs as teachers, lawyers, doctors, and other office professionals. Of course, seating has never been an issue as these persons are never obese SLOBS, with their legs outstretched. I also know that many of you have remarked that you've never been in a room with so many POLITE, well-spoken, educated people in your entire lives.

People who would never waste their time bickering endlessly over whether to use voice or CW ID's or the code speed of the CW ID.

I gave them a problem to solve, and for the last 6 weeks, they've
done everything BUT that. All kinds of "science fair" junk, but the
ONE thing I wanted them to do. They didn't even read the notes that
I sent along with it twoard solving the problem.

Just another reminder of this upcoming event for the second year in a row on Arpil 22nd! We still have swap tables available, but may run out!

The Eastern Idaho UHF Society will be hosting a hamfest/swapmeet in Idaho Falls, Idaho, at the Elks Lodge on April 22nd. This is an ARRL sanctioned hamfest/swapmeet with full license testing, swap tables, commercial tables, and talks on DXpeditions and APRS.

Main door prize this year will be a Kenwood TM-V7A. Other door prizes continue to be confirmed and will be posted on the web page. So, keep checking out our web page.

We have a web page - http://www.srv.net/~wa4vrv/hamfest.htm

Hope to see you there!

And no doubt it will ultimatly end up in the radio room
of someone in that "ARRL affiliated" club who pulls
in $150k/yr in salary (..or more), and is too tight to
even spend $20 at a hamfest and complains about the
admission cost.

Source record: 81518

Hello

I've weird clitch with mine. On the LCD display sometimes horizontal lines appear. Sometimes they stay in the same location and somtimes they move around. I have heard of other IC756's doing the same thing. Apparently the components used in the dc\dc converter section for the display become noisey and or the display itself is defective. So before you by a used IC756 power it up and leave it on for about an hour and check for this problem. It took about a year before I really started to notice the horizontal lines and it contuined to get worse. So you may not see it for a while with a brand new one.
Fantastic radio for low band AM broadcast rec. DSP blows except in certain situations. Noise blanker blows. Labeling of the rear panel is poor(small). Other than that for the money its one of the better radios.

It might be - if YOURS was also brand new, like theirs - and from a
company still in business...

As it is, the USED Clipperton L CAN frequently be found down in the
$450 price range - I have bought a couple of them myself, one for
$400, the other for $450...

The "price reduced" was a nice touch tho'...

Has anyone had any experience with the FT90. I like the size etc. and would like to know if there are any hidden jewels in the radio. Also, is there a MARS mod and is the ADMS program similar to other radios?

Thanks and 73s

Amen to that. I bought a Kenwood TR-751A from HRO about ten years ago.
They sent me a very dinged-up unit with missing screws, missing parts,
no manual, etc. I've never dealt with them since, and never will.

Don't laugh. it works. I work in the Medical Equipment industry and a angry customer wore a hat with a big sign that said :
"ASK ME ABOUT XXX company". It may have also been a tee shirt. This guy kept walking around the booth area. The marketing Manager for XXX company told him to grow up and guess what? He got fired by the VP and they gave some new equipment to the guy if he would stop hanging around the booth. He got the stuff the next week.

Mike,

The rig is in a 1999 Chevy Tahoe. The radio is wired directly to the battery with a very short run of heavy wire that is also shielded, The radio has a 5 " ground strap connected to it that is screwed directly into the chassis. (I ran the radio on a power supply in the house connected to a 3 element beam and it kicked butt (g))

I lose the noise when I unhook the ant so I doubt my noise is from the power source but it sure sounds like that whirring alt noise that cheap tape decks use to have.

I tried a separate ground to the ant base but that didn't help either. I seem to remember a web site that had car manufacturers fixes for communication noises but I can't remember it.

I WILL beat this nagging noise. It's not real bad but bad enough to bother me. I like things clean. :-)

Mike

No, it is highly illegal to pirate Motorola software to program their radios,
and they vigorously pursue pirates. But there's nothing they can do if you
write your own software.

Horizon gain is what matters How can a coil loaded quarter wave (Firestick)
have more gain at the horizon than a full length quarter wave?

I'm assuming you're asking if the SGC is as GOOD AS the screwdriver antenna for mobile operation. I have BOTH, and let me assure you that while the SGC is EXCELLENT in tuning a decent end-fed wire, it is not NEARLY as efficient in pure mobile operating with typical 8 ft. or shorter whips - by a factor of 10 db. on the lower bands!

I use the screwdriver while in motion, towing our RV, but toss up an appropriate wire at destination, and load it with the SGC for signal reports that rival my home-base antennas...

The fact that it's done nothing indicates either A: it's broke, or B:
that wasn't the problem.
It's very unlikely that you've got enough ripple to get past that,
unless your alternator has a diode blown.

Disconnect the antenna and make sure your noise is really coming in
through the power wires. The ARRL handbooks cover this pretty well.
You may have ignition noise being radiated into the antenna, or fuel
pump noise (as I do). My FP puts a lot of hash into 10m and also has
a spur on 146.730 (my local repeater, of course.)
That's a pulsing that varies with engine load, at first it sounds
like ignition, but if you idle in gear, then shift to neutral, you'll
hear the difference. (other than RPM)

Hang in a while. The original Icom 756's are starting to show up reasonable. And should be getting MORE reasonable if the 756 PRO lives up to expectations.

I've had a few 735's and 751a's in the last year or 2. Great radios.

Don't overlook the Yahoo's, either. The FT-890 and FT-990 can be had at pretty good prices, and are great radios also.

A few Kenwood TS-850SAT's have been posted the last few weeks at good prices. These radios have had some very loyal owners, esp. for the ones in later serial numbers. I think 60million and higher.

Good luck in the hunt.

Tim,

I have a pair of the 2 Meter Motorola "Ham Market" handhelds you mention. The model is called the AP-50 with a TT front allowing freq entry and DTMF. It is based on the SP-50 commercial radio and there was also a UHF version. They were brought back from a business trip to Malaysia about 5 years ago and were made and sold for Asia only. There was however a company on the west coast (I think called Altran or something like that)that was importing them for a while. All of the SP-50 accessories work with the AP-50 and from a distance look alike. I think the next model out after the AP-50 was the 68.

Source record: 81624

I use a Larsen base loaded whip, works fine, will outlast your vehicle.

You probably do not have alternator noise, probably you have ignition or fuel pump noise. One way to tell is to connect your radio to another power supply and see if the noise changes. If not, your problem is elsewhere. Disconnect the antenna, you will probably find the interference is coming in there.

For those who are interested in information on HF mobile noise suppression, I suggest that you check my web site below. This article was first published in the Mobile Amateur Radio Awards Club newsletter. I also have information on my nine-band three-antenna HF mobile installaion.

http://www.qsl.net/ka0dxm

If you do not have WWW access, or if you have questions, drop me a line and I will try to help.

Hi Guys;
I still have a few of these QRPp 40 meter transmitter circuit-Boards that are all assembled and require just 12 vdc(or is it 9?), antenna and a crystal. I have no idea wat the power output will be because I do not a sensitive enough meter.
They have 3 transistors but some may vary a little. The output appears to have a toroid coil. all come with a schematic and are very nicely done.
I found these many years ago at a Fest but I only need one. The last posting that I made was a few months back and sold a few then also.
Heres a picture if you guys wanna see it>>

The 10-20 is a preselector only, not a converter. Sorry I have no more info for you but haven't seen one for many years. There was a matching converter called the VHF 152 in an identical case, dial, etc. Both were accessories for the early postwar RME receivers.

3168. FS: Heathkit SB-104A w/PS - needs work

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-14 00:00:00 UTC
From: Christopher An <christopher_an@sympatico.ca>
Message-ID: <38F69F49.F63EA26A@sympatico.ca>
Source record: 81635
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.swap,rec.radio.amateur.equipment

Hi,
I have a Heatkit SB-104A HF transceiver for sale. It needs work!
I tested it with a signal generator and it receives strong signals like S9+++, but the audio is very weak and I can't hardly hear any weaker signals. I tested same thing with on air signal, and I can barely hear S9+++ signals only. The frequency display is totally blank.
Physical shape is very good. The front is excellent and the top and bottom cover has some minor scratches. All knobs are original and in excellent condition. There are some signs of repair (or modification) attempt. No noise blanker or optional filter. It is clean inside, and all works seem to have been done properly. There is a callsign (Canadian callsign) on the display. I checked the meter and it works fine. There is no missing parts, but I took out some ICs from a board and did not put them back.
If anyone looks for a nice project, this can be yours. I don't have any expertise nor time to work on this radio. I got this from local fleamarket as a working condition radio, but it did not work when I turned it at home. I don't remember the seller, so I have to take the loss.
My price is $135 plus $15 for shipping anywhere in Canada or Con. US. The power supply is pretty heavy and the actual shipping must be around $35~45.
The power supply is HP-1144 and powering off from the radio turns off the power supply as well. Power supply is in very good condition, and works great.
I believe my pricing is reasonable, but you can fix it if you think I was wrong. I think the power supply itself has about $60 (or more because it is 20A PS) value and the radio is about $75 as a part radio.
I will ship it by UPS with proper packaging. Payment can be made by personal check, money order, or certified check (cashier's check in US).

Thank you for reading this long for-sale posting and 73,

Christopher VE3UVT

I'm running a similar setup and receive excellent signal
reports fairly consistently.

The antenna I use is the Radio Shack High Power CB/10m mag
mount. If you're running one of their other CB/10m antennas it's
well worth the change to the top-of-the-line model (it retails at
$49.95)--I tried the next model down and my signal reports
definitely suffered.

>as best I can.

If the noise is coming from the antenna it could be a
grounding problem. The RS antenna I use seems to be free of that
problem, but my rig itself is solidly connected to a chassis ground.
If your's isn't, run a grounding wire from the radio to a chassis bolt
somewhere convenient and see if it make a difference. Obviously, your
radio should be connected directly to the battery (by the shortest
possible path), not to a fuse block or other terminal point if you
want to eliminate interference.

Hope this helps,

Rick--ke8hh

If what you hear sounds like spark plugs, then two things:
Resistive wires, and a ground strap from the hood to the body.

At idle, ignition noise is a "DAT...DAT....DAT....DAT" sort of noise.
It will appear pretty much everywhere, and only with the engine
running.
The original VW bugs were so bad that you could hear them on the
radio before you could hear them with your ear.

Another common source of noise is vehicle electronics. Not a lot you
can do there, except shielding and ferrites on the leads.

Rick,

I am going to try another ground and run the mag mount a but further to the back. I am running the RS Ant. I can't recall the model # but it is their best 10-11 meter mag mount. I am getting 1:1 swr in the middle of the band. I just need to do some fine tuning with it. I may go with another ant. I'll let everyone know how it goes. I May even go as far as shielding the ant wire grounding it to the chassis and ant. (3 wire set up)

Do you use the RS 10 meter radio if you do, how do you find the receiver?

Thanks
Mike

Oh yeah, the antenna part.
I'm using the same antenna, bought at a truck stop (felt like a
catholic in a synagog!)
I didn't do the mag mount though, I used a through body mount that
they sold there, about twice the normal diameter. This spreads the
stress out and should help minimize the body effects.

Feedline is RG-58 1.5 electrical wavelengths long. I tuned the
antenna using a bird directly at it's base. This antenna mount ends
up in a female PL259 on the inside instead of the usual frankenbolt.

I haven't been on the air much yet though, so I still don't have a
good feel for how well it's working. I'll get my chance sunday
evening starting at about 21Z when I make my infrequent commute to
Ames labs in Iowa. It's about a 600 mile trip. I'll be working 10m
SSB and SSTV, and I'm also avalable on APRS (KC6ETE-9)
http://www.findu.com/cgi-bin/find.cgi?kc6ete-9

I have to give a couple of PHD's a gentle tap with a clue-by-four :)

I would like to add CTSS capability to an old workhorse HT.

Specifically, I need a Yaesu FTS-12 CTSS Tone encoder/decoder board for FT-23R Handi. This is a "one chip" board designed especially for the FT-23R. If you have one to sell or trade or know where I can get one, please reply by email.

Cheers,

Al Link

When it comes to a mobile antenna for 10 meters, you should find the
best performance as follows-

Best to worst-

Full size 8'
Top Loaded
Center Loaded
Base Loaded
Continuously Loaded

Also within these groups, typically, the longer the antenna, the better,
more capture area.

Mike,
I have found that the best I have used is the Wilson 1000. It does a great job. I get grt sig reports and the receive is fantastic. SWR of less than 1.5. I also am presently using a 102 inch whip by RS without the spring. SWR of also less than 1.5 acorss the band. The Wilson seems best. Good luck!

Bill

I vote for HRO free shipping in usa. Low price if you do not have to
pay sales tax. As far as Texas Towers prices, yes they are cheap
and they do gaurantee new unopened products. But you had
better read the return policy every closely and you will see why.
Though the state they have a restocking fee, they do not except
returns for any reason. Period none nada.

I speak from experience. Yaesu ft 8100 purchased 3/31/00 dead.
I wanted to return the radio and get a kenwood dual band instead.
But they do not take returns.....
This is just my personal experience.

I have used MANY mobile antennas for 10 Meters. By far the best is the PAL Firestick. Either use the one for 10 meters or unsolder and cut back a coil turn at a time from the top and resolder one of the 11 meter models.

They do not have as much gain as a full quarter wave whip but they do have more gain on the horizon.

No, I was *specifically* told that any attempts to reverse-engineer the programming interface would be considered as illegally-obtained and used proprietary information and would be pursued in court. I showed the letter to two different patent & trademark lawyers and they said it was a grey area and that Motorola would win by burying me in legal costs.

It is no more highly illegal to pirate their software than pirating any other software.

After receiving enough nastygrams from their cronies I sold all my Motorola radios years ago.

Archive-name: radio/personal-intro

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet mailing list counterparts and complements. It is intended to serve as a guide for the new reader on what to find where. Questions and comments may be directed to Jeffrey Herman, KH6O, jeffreyh@hawaii.edu, or Paul Schleck, K3FU, pschleck@novia.net.

This message was last changed on 14 March, 1998.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions were held on the mailing list, and sent to the mailboxes of those who had signed up for it. When the Usenet software was created, and net news as we now know it was developed, a newsgroup was created for hams: net.ham-radio. The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became progressively higher. First one by one, and then as part of two reorganizations, what was once one group became many. In the process, developments elsewhere on the net were reflected in the groups as they were created, most notably the change to place all of the ham radio groups in one hierarchy.

The collection of newsgroups continues to grow as more people join the net, and as more topics of discussion gain volume, I expect to see more groups be created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the notable exception being rec.radio.swap. There are also a few mailing lists that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them, and not to the groups that aren't. The whole idea of having different newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any amateur radio-related message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the

group includes Cary Oler's daily solar progagation bulletins, ARRL bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec.radio.info-moderator@primenet.com. Inquires and other adminis-trivia should be directed to rec.radio.info-request@primenet.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups r.r.amateur.antenna, .boatanchors, .dx, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, the older tube based amateur, military, and commercial gear, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter. The .dx group is devoted to long distance amateur communications. Each of these subgroups has its own charter and FAQ; please refer to the archives to find these documents.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas. PLEASE BE SURE TO SAVE THE WELCOME MESSAGE YOU RECEIVE AFTER SUBSCRIBING -- IT WILL CONTAIN IMPORTANT INFO REGARDING UNSUBSCRIBING!

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send an email to cq-contesting-request@contesting.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

The QRP-L list is devoted to building and operating gear at low-power outputs. To subscribe, send an email to listproc@lehigh.edu and only write: subscribe qrp-l Your Name.

The TopBand e-list is devoted to all areas of operation on 160m. To subscribe, send an email to majordomo@contesting.com and only write: subscribe topband and follow the instructions you'll be sent.
This site, contesting.com, also hosts a couple dozen other ham-related e-lists. Use the above address, and only write: lists to get the entire index.

The Boatanchors e-list is devoted to the older tube-based ham, military, and commercial communications gear. To subscribe, send an email to: listserv@listserv.tempe.gov and only write: subscribe boatanchors

For homebuilding transmitters and receivers using tube technology, there is the Glowbugs e-list; send an email to: majordomo@piobaire.mines.uidaho.edu and only write: subscribe glowbugs <your@address.here>

The VHF DX discussion list can be accessed by sending an email to: majordomo@blacksheep.org and only writing: subscribe VHF-DX-discuss.

We now have a list devoted to amateur radio history. To subscribe, send an email to: ham-radio-history-subscribe@egroups.com - leave the body of the message blank.

Qth.net hosts over 100 ham-related e-lists, including lists devoted to each state, manufacturer, mode, band - too many to state here. Send an email to majordomo@qth.net and only write: lists to get the complete index.

For one of the most complete indexes of email lists, see the excellent web site http://pw2.netcom.com/~ac6v/pageae.html

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's

headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

FT-10/40R FEATURES

ï¿½ A16D 16 Key DTMF with DCS enc/dec, CTCSS enc/dec, ARTS, 99 Channels.
ï¿½ MIL-STD 810 Rated
ï¿½ Full 5 watt
ï¿½ Battery Charger for all size batteries compatible with FT-10R
ï¿½ Auto Range Transpond System (ARTS), This new system alerts you visually and audibly when a companion handheld is out of simplex range. A built-in CW ID is also included.
ï¿½High Output Audio High technology speaker design produces higher output even with it's compact design.
ï¿½ Alpha-Numeric Display 4 Character Alpha Name can be used to name your memory channels.
ï¿½ Digital Coded Squelch Included to allow quiet monitoring of busy channels.
ï¿½ Direct FM Improves packet performance and voice quality.
ï¿½ Dual Watch, Allows you to monitor an in-band sub channel for activity.
ï¿½ High Speed Scanning.
ï¿½ Top Notch multifunction control knob.
ï¿½ RX / TX Battery Savers, The FT-10/40R includes both transmit and receive battery savers for maximum battery life.
ï¿½ Omni Glow Backlit LCD Display.
ï¿½ 4 Power Output Levels, Low 1, Low 2, Low 3 and High Power levels are selectable to extend battery life.

What I have for sale:
FT-10R A16D 16Key Radio w/ AC Adapter
MH-34B4B: Speaker Microphone
E-DC-5B: DC Adapter w/ Noise Filter

Extras:
(1) ADMS-1B PC Programming Software allows quick and easy programming with your PC including data cable
(1) Foam padded full cover with belt loop

The average price I have seen just the radio forsale is $350. The microphone and DC adapter are around $30 each.
I will sell everything listed for $275.
This is a very lightly used radio. I am selling because I decided to go with a mobile radio instead.

Please email pitre@azstarnet.com with any questions or offers.

>
> Danny.Butler@txucom.com

Just plug it in. It is a straight through cable,
no pins/wires crossed ie it does NOT need a null
modem cable. If your cable is 25 pin then just
buy an adapter. Also if you go to the kenwood web
site you can get the memory managment control
software.

What I want to know is how do I enable the cross
band repeater. I have the UK version and have
done the wide band RX/TX mod but still can enable
x-band.

Thanks,
Simon

: tech data/schematic I would really appreciate it. Or if you know where I
: could get tech data or assistance that will be great too. Selecting the
: different switches tha the battery comes in contact with makes only a slight
: difference - charging voltage will go up to about 7.6V and current rate
: starts at about 10ma and will go to about 14ma. Not exactly mind boggling
: is it!

: Any replies will be greatly appreciated. If you respond to me directly,
: make sure you take out the "nospam" in my return address.

: 73...Mike VE5PT

Are you sure that all of the switches are operating...I've seen one where
they would stick in the down position every so often.
Also, if you are using W+W packs-they had at least one batch that had one
hole undrilled that should have been!
I've seen this myself as well....New pack...only charges for a few
minutes, then the charger indicates that the battery is charged-needless
to say, it is not properly charged.
But on the SAME charger, A real ICOM pack charged properly..after
comparing the 2 packs...one less hole on the W+W one!
Adding the hole myself with a Yankee(push)drill solved the problem.
A quicker(but prehaps a messier one) would be to use a thin soldering tip.

>
>
Well, John, you are really not giving us very much to go on. I could say
to you " I've lost my car keys. Any idea where I put them?" I think that
your friend needs to start at the beginning and persue a logical series
of diagnostics. The first question is 'Is it plugged in and switched
on?' No joking!! Lots of technical manuals start here. If it really does
not do anything, the fault is probably pretty basic (but not necessarily
cheap to fix!).

Good luck. 73,
Ian.

It would not seem that Gary is an expert on "courtesy" if one reads this thread.

> *I* would certianly consider it RUDE and INCONSIDERATE for a foreign
> guest at a group function to barge into a cluster of individuals
> involved in animated conversation in ENGLISH, and then proceed to join
> in the conversation in Russian!

yes, YOU probably would consider it rude. And if the foreign guest were simply asking where the Water Closet is located, and there were no other Russian speakers at the party, you would probably expect him to go in the corner
rather than try to be understood in your CLIQUE. ja?

> #2, since you are NOT (apparently) a citizen of the US, YOUR opinion

> home...

Has Gary ever been to Norway? In many ways, they are much MORE free over there than amerikans think they are... and most of them are very friendly to 'foreigners' - even ones who don't speak the local language when every one IS... I'm tempted to suggest that Gary travel and see how other parts of the world really are, but that's not such a good idea if he tells everyone he is an amerikan -- we have a bad enough reputation in the past few decades. :(

it would never occur to Gary, who obviously is the authority on
"common sense", to think that there might be many people reading
the group in English that also understand German (or any other
language)... and amerikans wonder why they are no longer respected
in most of the world (except for their money)...

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

In the 1960s and 1970s, thousands of firemen and ambulance
squad members came to rely on their crystal controlled,
transistor Plectron and Motorola desktop monitor receivers.
They have now been replaced by battery operated portable
pagers, and the desktop models are often available at
hamfests in the $5 - $25 range. Since many are in rough
condition and need repair, a hamfest special is better
suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are
excellent for dedicated monitoring of local frequencies --
a task for which you wouldn't want to tie up your 400
channel programmable scanner. They are desktop models
which can be powered from 117VAC or 12VDC with the proper
mobile cord. The audio quality of a Plectron P1, Plectron
700 series, and Motorola Alert Monitor is far better than
any consumer grade scanner and the sensitivity, image
rejection, and intermod immunity is outstanding when
aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band
receivers: VHF-low, VHF-high, or UHF. No single Plectron
or Motorola Alert monitor can cover the entire 30-50 MHz

band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal

scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

The tape recorder inside the Receiver/Recorder employs two rubber belts. The Projector Recorder Belt Company makes replacement belts which work fine, though they may not be the original equipment:

1. PRB SCA8.6 (218 mm)
2. PRB SCQ 2.5 (64 mm)

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Crystals

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal
fundamental frequency. Merely supply International with
the exact receiver model number, printed on the rear label,
and the frequency you want to monitor. They will perform
the necessary calculations.

Crystals for Plectrons

The Plectron P1 series contain two crystals. The second
local oscillator crystal is 11.155 MHz regardless of band.
On VHF high band (148 - 175 MHz), the P1 series employ this
formula for the first local oscillator crystal:

Crystal frequency (MHz)
= (station freq (MHz) + 10.7) / 4

or

Crystal frequency (MHz)
= (station freq (MHz) - 10.7) / 4

On VHF low band (25 - 54 MHz), the P1 series employ this
formula for the first local oscillator crystal:

Crystal frequency (MHz) = (station freq (MHz) + 10.7)

or

Crystal frequency (MHz) = (station freq (MHz) - 10.7)

There are two crystals (Y1, Y2) used in the Plectron R700
series, one for each local oscillator. The crystal
formulas are:

RF Range (MHz) Y1 (MHz) Y2 (MHz)
_____
25-29 (f+10.7)/3 11.155
29-32.6 (f+10.7)/3 11.155
32.5-35 (f-10.7)/2 10.245
35-41 (f-10.7)/2 11.155
41-47 (f-10.7)/2 11.155 (use 10.245 MHz
for Y2 on 44.62 MHz)
47-54 (f-10.7)/3 11.155
148-158 (f-10.7)/9 11.155
158-175 (f-10.7)/9 10.245
450-470 (f-10.7)/18 11.155

The economy Plectron 500 series use this scheme for the
first local oscillator crystal:

RF Range (MHz) Crystal (MHz)

---

25 - 35 (f+10.7)
35 - 54 (f-10.7)
148 - 174 (f-10.7)/4

Most Plectron 500s use an 11.155 MHz second local oscillator crystal. However, a 10.245 MHz crystal is used instead for receivers in these ranges: 33.4 - 33.78, 44.62, and 158.78 - 158.82 MHz.

Power Cords

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

Squelch and Minimum Volume Setting

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely

silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net

Alert Monitor parts are available from Motorola. Phone (800)972-3226. The part number on the service manual for | my VHF-high band monitor is 68P81048A55-G and my VHF-low | band manual bears part number 68P81050A95-D.
Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model UHF VHF-high VHF-low

SM-301 X X X
SM-302 X X
SM-303 X X
SM-304 X X

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from
the crystals used in the conventional single channel
Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) /
10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

Plectron Alternatives

Too bad Plectron is out of business. TCS Communications
Corp. sells used Plectron receivers, in working condition,
for $75-100. If you require crystals or reeds, TCS may be
able to find some types/frequencies. Contact:

Terry Marengi
TCS Communications Corp.
tel. 1-800-TCS-XMIT
email: TERRYTCS@aol.com

If you wish to purchase a new receiver with "Plectron-like"
signaling capabilities, contact Reach Electronics:

Reach Electronics
1311 West Pacific
Lexington, NE 68850
(308) 324-6661
(800) 445-0007
FAX: (308) 324-4985

Reach sells tone & voice pagers, Alert monitors, and
ENCODERS. They also do contract manufacturing.

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

I have an MFJ-4035W that does an excellent job of powering the
equipment in my shack. I have an FT-920 and an FT-8100R connected to
it and it idles along when powering them. Off hand, I don't see any
reason it wouldn't handle your TS50 and 850 w/o the slightest problem.

I hear a lot of jokes about MFJ equipment, but for my money
the MFJ accessories I have (the MFJ-4035 PS, the MFJ-969 Tuner,
2-MFJ-1729 2m/440 Mobile antennas, and the MFJ Super HiQ Loop antenna)
do an excellent job for a much lower price than I would have to pay
for a more prestigious name.

Hope it helps,

73, Rick

If it is totally dead, meaning no tube filaments glowing, no pilot lignts, no dial lights, etc, then suspect the power supply. Start with the fuse and then work through the other components. Most can be checked with an ohmmeter with the radio turned off.

If it lights up the filaments, pilot and dial lights but has no other signs of activity on receive or transmit, then probably the low voltage DC has a problem, also in the power supply.

Beyond those suggestions, I can't say too much. You will need to provide more details on the problem.

Hello,

I have Discone antennas up on a eBay Dutch auction for $29.95. These
are not only great wide-band receive antennas, but are good for
Transmitting in the Amateur 144, 220, 440, 900, and 1290 MHz. bands with
a SWR of 1.5 to 1 or less.

The Auction ends 4/16 9:52 pm cst.

They're at:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=305204189

This is a Dutch auction, which means no worries about being outbid at
the last moment, or the price sky rocketing because of bidding wars.
You bid, you get one!

Be sure to check our other auctions and website for other great deals on
Amateur, Scanner, and CB antennas.

Thank you

Hi Guys,

Icom does not make IC751a's anymore but if you ever wanted to
own one that is like new, this is the radio.

Late serial, closeout era, true collectors radio.

Serial number #7819, this is *very* late. The so called "late
model - dot emblem" radios dated all the way back to 1990.

As new physical and electrical condition. Extreme low hours (
estimate 25). There are no scratches, rub marks, faded paint,
none nada, nil. The window for the S-meter and frequency display
is crystal clear. Original carton, packing, manual, and microphone
fresh and like new. Original Icom packing bag with green Icom
tape. Also will pass along an Icom IC751a color marketing glossy.

Asking $700 and you ship.

73,
Don Rasmussen WB8YQJ/6

Back in the 70's MFJ's name was synonymous with cheap, inferior products,
and their bad reputation was well deserved.

Today, however, they have cleaned up their act and now produce some
excellent ham gear at extremely attractive prices. I wouldn't hesitate to
buy another MFJ product - to go along with the half dozen or so MFJ items I
already own and enjoy.

I'm looking for the following, some of the stuff is available new,
some isn't)

SP-950
SM-230
RM-1 (these are NOT Available as a part any longer, this is per
kenwood!)
SW-2100
TL-922A (hehehe... if I can afford one...)

Stuff must be in Good to Mint Condition, no junk, please.

Leave e-mail at address below

DTMF stands for Dual Tone Multi Frequency, also called Touchtone. It is
the same as the tone pad used on telephones (though sometimes the radio
pads have 4 more buttons). DTMF is typically used for radio control of some
function on a repeater. One such function might be a phone patch. You
have to check with the owners of any local repeaters to see if they support
phone patch, and get the access codes from them. Often you have to be
a member of the radio club sponsoring the repeater to get the access codes.

it means think long and hard about the NEED for a dual bander...I have 3 2m/440 radios and can't recall ever using 440, at least here in southern California. unless you have an absolute need and availability, they are not worth the extra cost. there is also nothing wrong with a good used radio for your first rig. the worst thing you can do as a new ham is but a bunch of stuff that ends up in the drawer after the first week !!! Good luck in the contest

"Dirtywrench" <dirtywrench@aol.com> wrote in message news:20000415102810.27809.00001497@ng-fe1.aol.com...
I've just passed my element 2 and 3a exams and I'm currently waiting for my call to be issued. I think i've settled on an IC-2100H for my first rig(because I can't afford and Dual-Bander). My "wet behing the ears" question
to you is what does "DTMF" Stand for when they describe the function of the microphone and does this enable me to use autopatch? 73's and thanks.

DTMF stands for Dual Tone Multi Function. It is the same tones
generated by the buttons on a standard telephone. Some radios actually
have an extra row of buttons for other functions such as system controll
functions.

If the system you are using has an autopatch, then these will allow you
access the phone patch system.

Another term you will probably run across is CTCSS. This stands for
Continuous Tone Codes Squelch System. Some repeaters operate by merely
sensing the presences of an RF (transmitted) signal. However,
sometimes, if there is interference on the frequency, or another station
at a distance that could bring the repeater up, then one technique is to
use CTCSS. What this does, is the repeater will not activate unless
this CTCSS tone is present. The CTCSS is a set of subaudible tones that
usually cannot be heard by someone using the radio (actually if you
listen carefully, sometimes you can hear these tones especially if no
one is talking). While the user cannot hear the tones, the radio
receiver has special circuitry that detects the tone and then opens up
the receiver and in the case of a repeater, lets the repeater retransmit
the received signal. There are approximatly 32 standard CTCSS tones.
CTCSS is the "generic" term for this type of sub-audible coding.
Motorola calls it Private Line or PL. GE calls it Channel Guard or CG.
They are all the same thing.

Andy

Hello
has anybody experience with the Interface for the Yaesu VX-5?
I am using the EVE-Software and the home-made interface (diagram from Modification-Forum for VX-5, incl. 6 Transistors), but it doen't work.

If I try to up-load data from the Radio I get from there after some sec. the Msg. Clone Error.

What are the parameters for the Com-Interface on the PC ?

Best regards

Gerald

THe obvious first check point is the power supply fuse. If thats ok, check the negative bias supply to make sure you're getting negative 60 volts or so to the proper places in the transmitter

beyond that, its gets more complicated--you need to get the voltage chart and check all of them.

Mike,
About the noise: Try all the standard grounding tricks,
'strap' the hood, body panels, motor, exhaust, etc. to a
chassis ground.(not much reduction here, but some)
Electrical systems: 'by-pass' any/all electric motors
you can 'get' to. The 'in-the-tank' fuel pumps are notorious
for noise(real pain). Any noise with motor off, ignition on?
If so, fuel pump, sorry 'bout that. Best place for 'by-passing'
is at the tank, but! If you can find the power lead for the
fuel pump in an accessible spot closer to the motor/battery,
try 'by-passing' there. If it helps, then you know for sure
where the problem is. (Might be easier to get a new car)
'Doc

ABSOLUTELY BRAND NEW Icom IC-2SRA
2m HT with BP-84 hi-capacity battery
VERY wideband receive capable
25-950 mHz (Yep, that INCLUDES cellular)
Selectable search steps (yep, to include .030)
With Icom soft case
I just bought this HT, and it's not what I need. I got it BRAND NEW in the box from a ham out East. Opened the factory packaging myself for the first time. You will not find a nicer "preowned" IC-2SRA. About 10 minutes total usage time.

Looking for $200 + ship or will trade towards Alinco DX-70T, Kenwood TS-50, Or Icom 707 series + Cash on my part. Need another HF rig, please let me know what you have to trade (no b.anchors please)

Thanks for looking and 73,

Gary K7MHZ

In addition to cleaning switches, if it is an intermittent problem or there are a whole bunch of seemingly unrelated troubles, tighten up *EVERY* screw that has a ground lug associated with it. Cleaned up a T4X I had that had intermittent bias, no AM, and carrier balance problems.

Go to a catalog and look up NimH AA and AAA batteries- I think you will find each size has the same mAh rating regardless of manufacturer. Same size package, same chemistry= approx. same mAh.

3256. Ft-840 Help

Hello,
I'm trying to get the Yeasu MD-100 Desk Mic to work with the
FT-840.Does anyone know what wiring needs to be changed to get the tone
controls to work on the mic?
Please email me at > duck@nb.net
Thanks,
Dwayne

>IC-745

>Also, if the battery fails, you have to
>send it back to Icom to have the microcode that
>runs the radio reprogrammed.

I just replaced my Icom memory module with a plug-compatible
module designed by Roberto Nardo' IK2RND. For $60US Roberto
will ship you a module pre-programmed for the 745 or a number of
other Icom rigs that use the same module. When the battery on Roberto's
module dies, all you lose is your presets. (The microcode is in ROM)
Replace the battery and your Rig is up and running again.

You can get the details from Roberto at roberto.nardo@pv.infn.it .

about
> 130. Thanks for usefull info,73,Mike

You can easy adjust the rig to 200W.
But don t' do this , because the rig is outside specification with more
then 100W. you have no advantage , and bring a lot of spurious /garbage
in the air, the 3 ,5 , 7 IMD products increase proportionally more then the
power.
Just think on your fellow hams.

I am hoping someone can help me with this problem. I am trying to program the alphanumeric memory names into this radio. I have followed the manuals instructions exactly and the radio will not do what it is supposed to. This is the way I have been doing it, as the manual says:

1. Put radio in memory recall mode
2. Select desired channel
3. Switch OFF power
4. Hold MN button and Power button simultaneously to turn back ON

At this point the radio is supposed to display a blinking digit in the first numeric position, and there are instructions to program this position and advance to the next one, but instead, the radio powers up to regular memory mode and displays only the frequency and channel # as it did before turning power off. I have a valid frequency programmed here, so that is not the problem. It's just that MN+Power On does not give me the blank display for alphanumeric programming - just shows me the frequency just as if I had Powered on without pressing the MN button. I have tried this many times - I know I'm pressing the correct buttons in the correct sequence.

Do I have a faulty MN button, or has it been somehow deactivated? I cannot figure out what is the problem here. I'm in Memory recall mode with a frequency programmed into that position. What am I doing wrong?

I would be much appreciative of any help.

Your question has been answered, but the one you didn't ask about
autopatch is "Who pays for the telephone at the repeater?" The local
club does, and there is a phone bill each month to pay, so if the club
has a repeater, and you want to use it, join the club and help with the
expenses.

3282. alinco dr-600 overheating problem

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-16 00:00:00 UTC
From: Chris Howell <kc5dvr@swbell.net>
Message-ID: <GNkK4.6944$_H2.178845@news.swbell.net>
Source record: 81320

hopefully this is the right ng for ??. the rear-mounted fan on my dr-600 does not work. i've noticed that it get quite hot when running, even just rx'ing.

i opened it up and found a "heat sensor" in-line on the hot lead. i bypassed that sensor and it fired right p. since i have never heard the fan before (based on how loud it was), i have to presume that it has never worked. i'm guessing that it is that "heat sensor".

it is a ~1 inch black plastic rectangle with leads out of either end. marked "TOKIN 493" on the top line and "OHD 1-50M" on the bottom line.

any ideas where i can get a replacement? this radios out of warrenty, so exact part is not an issue.

thanks, chris

You are looking for a UT-15. This was an interface board that allowed
the use of a Communications specialists TS-32 in the IC-271A to
provide both CTCSS encode and decode and be controlled from the radio
front panel..

If you find UT-15S then this has both the UT-15 and TS-32. Now the
question is does your IC-271E have the necessary internal connectors
to allow the installation of the UT-15.

Gary

Real hot is relative. If you use it for packet and it doesn't come on
then yes, there is a problem. Just normal two way FM communications and
it might never come on at all. If still in doubt, call Alinco and order
the part. If you don't have the schematic, surely they do and can get
the correct therister for it.

Yes, take a look on page 2 of the Specialized Communications manual supplied with the rig. Only pins 2 through 8 need to be connected.

it get hot enough to make it uncomfortable to hold. i'd have thought that that was too hot, i'd rather that it didn't get that hot. assuming that the part is good and the unit does not get hot enough to trip it, is there a different value that i could put in that would trip at a little lower temps? would that be a big problem?

this radio sits on a shelving unit that is 3 inches away from my monitor and lotsof other radios/acanners, etc. i'd rather not have that heat up there.

thanks for the reply, chris

> will the new centron work, with out any mods, thanks Craig

Thats close enough for gov work. On a tube amp, the highest bands will
show the least output. That you are getting 500w on 10m, is not too bad.
At the most, you would do 600w, if lucky and new tubes and proper drive.
I wouldn't worry about changing as the difference between 500 and 600
watts is unoticeable on the air. In 95% of the cases on 10m, you don't
need a 1/4 of that much to do well. Either the band is open or it's not.

i have a contact at Motorolla (i won't say who to protect his job). He thinks
it will be arount $2900 street price and is not sure how the radio will be
distributed (dealers?)
he said it is to compete with the Icom 756
PRO and the Yaesu FT-1000 MP.
It will be interesting to see how it works. By the Way. Motorolla make a 2 mtr
handheld for $260 and is available from some Dealers. It is about the same size
as the HTX 202 etc but built well.
take care, TIM

Hi,

I just recently got into amateur radio. I currently own a Kenwood TH-22AT handheld 2 meter. A friend of mine and I are trying to rig our Kenwood's up so that we can use them to talk to each other on motorcycle road trips.

We tried buying the Kenwood headset with VOX but that worked horribly. All kinds of wind noise even though we have full face helmets and wind shields.

I've heard that earmics work great for noisy conditions, but I'm having trouble finding suppliers. Anyone know where I can get a decent quality earmic with PTT suitable for mounting on a motorcycle handlebar? So far I've found Cavcom (www.cavcominc.com). They're apparently one of the best earmic companies but their cheapest system costs like $600. Ouch! Plus the PTT does not look suitable for mounting on a motorcycle. So I'm looking for something a bit cheaper.

I'm also interested in any other products that are suited to motorcycle riding (throat mics, etc.).

Thanks,
Jeff Wilson

The wiring is not even close to being the same. You can
damage the radio if you try it.

3327. FS: National NCL-2000 Linear Amplifier 2000 Watt Amp

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-16 00:00:00 UTC
From: cbatterman@attglobal.net
Message-ID: <38FA945D.B3628239@attglobal.net>
Source record: 81365
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.dx,rec.radio.amateur.boatanchors

This National NCL-2000 linear works flawlessly. It was rated for 2000 Watt input on 80 -10 meters. I measure 1500 watts DC output with my Bird wattmeter. Comes with a spare set of 8122 tubes and original manual.

The amp is in nice condition. Front panel is near mint with only some wear on the rocker switch lettering. Cabinet has a rub on the left rear and a few small scratches on the trim ring. Everything appears original inside and out including the paint.

This is my favorite classic amplifier. (and I've owned a lot over the last 30 years) You can drive it with anything from 20 - 200 watts, solid state or tube. Tons of gain. Works like new. $695.00 including extra set of tubes.

Thanks !

> will the new centron work, with out any mods, thanks Craig

Actually, your output looks pretty normal for that rig and that band. I
tend to get somewhat more output on the lower bands, but 500 watts is
pretty good for 10m. When your carrier power output drops to less than
400 watts on 10, it's time for some new tubes. You may want to use the
Svetlana's - but if you do, you'll need the bias mod to prevent runaway
in standby mode.

mAh means MilliAmpHour.
That means you have to supply a load (resistor) to the battery of reasonable
milliamps
and see how LONG in hours it does supply that milliamps.
The batteries have a discharge curve related to the amount of load.
DO NOT over load the battery!

You can pretty much compare to similar cells.
NIcad AA is almost always 500mAH. There are some exceptions, but they
are expensive, and maybe 600mah.

If you really want to know for sure, you need a constant current load
of say 30mA, measure the time till discharge, and multiply time by
current to get AH.
The RS testers won't help you here. (other than to see if the cells
are generally good or bad)

I'm going spelunking down there tonight with some ferrites, on my
explorer. It's not horrible, but it's annoying. Otherwise, it seems
ok, ignition is detectable, but only just.

Hopefully, a ferrite "juju bead" or two will fix it. :)

BTW: Make sure your ferrites are lossy at the frequencies you're
using them at!
Otherwise, they are much less effective. All ferrites are not created
equal.

Source record: 81489

I used one for a bit and I also saw a review in QST a few months ago for a whole range of switching supplies. The MFJ is made for them by NCG .The fan on the 40 amp model is loud. The 20 amp model is ok. IT appears the fan is on a timer so when you tranmit is always goes on. I think if it were temperature sensitive it would have been a better idea. I also have tried the ASTRON model 30 amp and think it is a better deal but you lose the cigarette plug and the little extra connectors for accessories.

One problem you may find is that the water pipes are not necessarily metal pipes. Lots of home use plastic water pipes from the main to the house, then change to copper or some other metal inside the house. It would be best to run your ground directly to a ground rod.

From: Gerry and/or Robin Lempicki <lempicki@psych.umass.edu>
Message-ID: <38fb8dde@oit.umass.edu>
Source record: 81158

I got some replacement cells for this pack and I am looking for points on taking it apart. I took the sticker on the top off and found the locking tab, now does one carefully pry it apart? Or does one need to apply a little heat with a heat gun? I am not sure if there is glue or just locking tabs on these so any input is appreciated. -Gerry

3357. Anyone heard of Norantenna??

Newsgroup: rec.radio.amateur.equipment

From: Steve Cuilhe <wa6gsd@ix.netcom.com>
Message-ID: <38FB8F17.247E45CA@ix.netcom.com>
Source record: 81159

Has anyone heard of a company called Norantenna in Ski, Norway??

I purchased 3 antennas made by them at a swap meet recently..

They are obviously made for marine use, a tapered whip about 7' long,
and
at the base is a weatherproof space that has a circuit board that maybe
be an RF
preamp..This enclosure is solid brass, and has four mounting lugs on it
for flush mounting the antenna to a bulkhead.

The antenna also has a sticker on it from Teledyne, shows it as a model
TLD-Antenna. So, maybe I can try through Teledyne.

Anyway, can;t locate anything on the Web about this company so thought
I'd try here..

Thanks in advance for any info.

On the 706 discussion bulletin board at

http://www.vartel.com/discussiongroups.htm

There is some mention of the stock 706MK2G not working properly on PACTOR due to a timing problem, and that user had to send it back to ICOM for a fix.

Anybody here know anything about any problem on PACTOR? Are you using PACTOR with a stock 706MK2G successfully?

Reason I ask is that I am having trouble staying connected with a MBO, and can't understand the reason. Mine is stock.

Just another reminder of this upcoming event for the second year in a row on Arpil 22nd! We still have swap tables available, but may run out!

The Eastern Idaho UHF Society will be hosting a hamfest/swapmeet in Idaho Falls, Idaho, at the Elks Lodge on April 22nd. This is an ARRL sanctioned hamfest/swapmeet with full license testing, swap tables, commercial tables, and talks on DXpeditions and APRS.

Main door prize this year will be a Kenwood TM-V7A. Other door prizes continue to be confirmed and will be posted on the web page. So, keep checking out our web page.

We have a web page - http://www.srv.net/~wa4vrv/hamfest.htm

Hope to see you there!

I have several Collins 208U-3 3 KW 2-30Mhz RF Amplifiers. These are in
good condition
as removed from military service.

This is a military/commercial quality amplifier that uses a single
4CX3000A to produce
3 KW PEP or average power with only 0.2 watts of input.

These are automatically tuned with a servo system that takes about 10
seconds to tuneup.

The primary power input is 200-250VAC, 3Ph, 47-60Hz.

The net weight is 975Lbs, size: 32" x 23" x 70" Tall.

If you have 3Ph power and the room one of these superb Amplifiers would
make a great addition to your station.

I am offering these unpacked FOB Somis, CA as follows:

untested less the 4CX3000A Tube $3,000. unpacked.

I have a few NEW Guaranteed 4CX3000A tubes at $1,000. each

Crating by a professional packer is $350.00 additional.

A complete service manual is included at no charge.

There is a photo of this item on our web site
http://www.columbiaelectronics.com

If you need more info please contact me.

Knight kits were sold by Allied Radio out of Chicago back in the '60's.
They were later acquired by Tandy Corp. - the rest is history... Maybe
someone else can add to this tale ?

Good Luck and 73 de W6DKN

3371. Good RF Ground ? Speaker Wire ??

Newsgroup: rec.radio.amateur.equipment

Hello,
I'm wanting to provide a good RF ground for my two HF rigs. I had some leftover speaker wire (2 parallel stranded conductors ~16 Ga) and used it. It's twisted together at both ends and is about a 8 ft run from the equipment to the 'utility' room where it runs up a wall to connect to the cold water pipes, about 12'-14' total. Just curious if this is too long for HF operation ? Though it would be a hassle I could run a shorter length of wire out through the basement window and attach it to a ground rod ?? Also any issues regarding the use of the twisted together speaker wire ? I could buy some 12 Ga stranded and use it instead but this is just RF ground, My electrical ground (all 13.8V gear) is grounded through the PS and its 3 wire plug.

There are two basic reasons Hams ground equipment. The first one is lightning the second one is RF in the shack. Grounding for lightning is a very good idea and it can save your house as well as your equipment. Grounding for RF is not at all clear cut.

The national electric code is pretty specific on how to ground for lightning. The only key point would be to ground where the antenna comes in to the shack. My guess is that you are in the basement ,just like me :). That would make a ground outside to a good ground rod the better choice.

For RF in the shack, once you have the equipment hooked together, do you have a specific problem ? If so work on that problem. As an example I have a lot of grounds at the base of antennas and the like, but no master ground wire for the entire shack. I also do not have an RF problem. Maybe not the best idea from a lightning standpoint, but it works just fine for the RF side of it. After that admission I'll bet the rest of the thread will be about me :) ....

Hope this helps.

Bob

Hi. I'm an electronic musician looking for some old electronic music making equipment. Old synthesizers, vocoders, effects, drum machines, sequencers, or other devices. Especially interested in gear with knobs or slider controls. Also looking for any modular patchable or analog synth, complete or parts. BROKEN OK.

Moog, ARP, Oberheim, Roland, Korg, Sequential, Buchla, Serge, Paia, Yamaha CS, EML, EMS, Polyfusion, Maestro, Mutron, EH, etc.

Please email me privately with price and condition if you have something or know someone who might. Thanks in advance!

examples of things I am looking for:
Minimoog
ARP 2600
Korg MS20
Simmons SDS7 Digital-Analog Drum System (brain only)
Roland MC-202 Microcomposer
Moog 16 Channel Vocorder
Roland Jupiter 8
Roland TR-808 Rhythm Composer
Graphic Equalizer GE-810 and GE-820
lots of other stuff....

Sent via Deja.com http://www.deja.com/

Live up to your own standards! COMMON SENSE? I'm reading your message in "nl.radio.amateur" where DUTCH is CLEARLY the prevailing language, so why did you switch to YOUR language of choice ENGLISH instead of using the DUTCH language commonly used in this ("nl.radio.amateur") newsgroup.

Before you make any other stupid remarks review your Newsgroups line next time to see if they all match the same language. An apology from you to the readers of the DUTCH newsgroup "nl.radio.amateur" (in DUTCH) is about the least you can do to show that you realy mean what you wrote. Otherwise shut up.

En nu ga ik er geen woorden meer aan vuilmaken, ik vind het wel goed zo.

Met vriendelijke groet,

Henk.

Do you have authorization to use it on the MARS frequencies? If so
all you need ot do is contact the manufacture and send them you MARS
license and they will send you the mod...

Jeff,
Take a look at the products by Premier (makers of the ADI radios). They have an earpiece with boom mic and a throat mic model that both work well. I know several hang glider pilots who use them under their helmets. VOX is definitely out of the question on a bike due to the wind noise, as well as heavy breathing setting it off (a problem we sometimes have with hang glider pilots working hard in rough winds).
I think you will need to settle for a finger-mounted PTT with the wire running down your sleeve, though, instead of a handle-bar mounted PTT.
see http://www.adi-radio.com/audio/portable.html
look at the SPM-400 and SPM-500
You can get the products from the regular suppliers, including HRO and AES.

Hi! I'd like to purchase one each of the following Azden radios:

PCS-7800 or PCS-7800H 10M Xcvr
PCS-7200 or PCS-7200H 220 MHz Xcvr
PCS-7300 or PCS-7300H 440 MHz Xcvr

The radios must be a cosmetic 8 or better, and 100% functional. They must be complete with manual, power cord, mic, and mounting bracket.

Please drop me a note with your offers.

Thanks,

Paul WD8DKY

JABRA makes a hands free set for cellular phones that might be adaptable to your needs. It will require making an adapter cable to connect with your HT. The mike is in the ear piece and it picks up your voice through the jaw bone. Don't know if it will allow VOX operation or not.

Check at Radio Shack (they have them).

Tao:

If small size and less weight are important, go with the switcher. They have come a long way and today's designs do a better job of reducing spurious emissions. i.e. no "birdies" in your radio.

But, if you are a "do-it-yourself" repair guy, the linear may be the way to go. Designs have'nt changed much in 30 or so years. I've fixed several Astrons without even a schematic.

Good luck and 73.

Al, W2JUV/AE

1999 Honda CR-V, noise originates from EVERYWHERE - the pop pop pop of ignition noise, the whirr of the alternator, intermittent buzzes and grunts from the A/C, fans, fuel pump, and god knows what else. And an S9+30 roar every time I honk the horn! Don't get one of these of you are looking for an RF quiet environment! I pull off and park.

As for the antenna, the longer the radiator the better. My fiancee has vowed to never ride in my car again if do it, but I lust in my heart for a cut-down full 1/4-L whip. I have an HTX-10 and the cut-down base-loaded magmount DB antenna just does not get out. But I have fun anyway - if you can hear me, you are a very good listener!

news:38fab2c2.211072@news.usol.com...
| Hello,
| I'm wanting to provide a good RF ground for my two HF rigs. I had
some
| leftover speaker wire (2 parallel stranded conductors ~16 Ga) and
| used it. It's twisted together at both ends and is about a 8 ft run
| from the equipment to the 'utility' room where it runs up a wall to
| connect to the cold water pipes, about 12'-14' total. Just curious
if
| this is too long for HF operation ? Though it would be a hassle I
| could run a shorter length of wire out through the basement window
and
| attach it to a ground rod ?? Also any issues regarding the use of
the
| twisted together speaker wire ? I could buy some 12 Ga stranded and
| use it instead but this is just RF ground, My electrical ground
(all
| 13.8V gear) is grounded through the PS and its 3 wire plug.

Depends on the supply. I have an Astron rated at 15 A continuous,
18 A intermittent. It does have a little fan, but the fan doesn't
run unless a thermal sensor says the heat sink is too hot. I've used
this supply to run a 10 A load for hours without the fan ever coming
on (and without the case getting more than warm).

I'd pretty much decided that I wouldn't buy from a retailer who
advertised like you when I read this ad...but then I looked at your
web page. I wouldn't buy a radio from you if you were the last shop
on earth to sell one.

After years of procrastination, I finally take the plunge and get an
amateur radio license, only to find a bunch of egos at war when I get
there. You'd think that out of this bunch, at least the retailers
would be welcoming new amateurs into the hobby. Sheesh!

3407. Alinco DX-70 Advice

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-18 00:00:00 UTC
From: Mark Mokris <crescend@mich.com>
Message-ID: <38FC5AE8.1F1787ED@mich.com>
Source record: 81181

Hi,

I am trying to use my Alinco DX-70 at home with a linear amplifier. Problem is that 100 watts+ is a bit high for this amp. The low power setting on the DX-70 is 10 watts, and this is too low.

I would like to reduce the power from 100 watts by using the ALC input to the radio. My amp doesn't have an ALC output so there is no connection to be made to the amp. The DX-70 manual says the the ALC input to the radio expects 0 to -3V. Shouldn't I be able to apply this voltage with a battery or two and see the power output drop from 100 watts. I have tried -1.5V and -3V, but in neither case does the power output drop from 100 watts. Is there something I do not understand?

Thanks! A reply by personal email would be appreciated.

From: Larry Gauthier <larryg_AT_ismi.net>
Message-ID: <38fc5274@news.ismi.net>
Source record: 81182

I bought an Astron SS25m with my IC746, and have been happy with it. It's small and causes no RF interference that I have noticed (I have the supply sitting right on top of the 746). It has a quiet fan (as does the 746) that is thermally controlled, and runs every once in a while.

A recent QST review favored the independent switching power supplies (Astron, MFJ, others) over the supplies of the rig manufacturers themselves (like Icom) saying the manufacturers were RF noisy.

I believe there is a switch inside the DX-70 to lower the high power setting from 100 to 50W. Call Alinco & they will be glad to tell you how to locate the switch (if it's not in the owners manual).....

Mark,

There's a switch inside the radio that limits the power output to
50 Watts. This should solve your amp drive problem. Details are
in the owner's manual. If you don't have the manual, let me know
and I'll look it up for you in my manual.

Jim,

I agree. I wasn't going to even look at the lids web page, just blow
him off for the A-hole he presented himself to be. But after reading
your post, I decided to check out his web page.

Really mixed. But you know what is surprising? For someone with
the 'old license is the only real license' mentality, his web page has
the 'flavor' of a CB hacker page... Not that the CB hacker
pages are necessarily bad, some of them are quite interesting, and
you can always find a few gems on radio conversions, but the
'flavor'...

Mike

Been there - done that. After mucho experementing we ended up with the Yaesu ear bud cum mike combo with the radio in a Yaesu holder intended to go on a car door adapted (bent) to fit on the bike master cylinder. The bud stays in your ear under a helmet and the mic (about the size of afelt-tip pen but 1" long) simply dangles when not in use to be picked up to talk.

This provides adequate comms for "Gotta P" or "need gas" or even "look at the neat xxxx" but don't expect to rag chew on esoteric philosophy - the wind & mechanical QRN are too loud. Naturally YMMV. Maybe CU on the road.

I'm looking for some information on handheld radios. Although I'm not yet a ham I'm
planning on taking the test at the end of April and would like to have a radio by then.
I'm looking for a dual band 2m and 70 cm and something with a 5w output. I've done a
lot of research but I've never had any type of amateur radio so any info that can be
provided would be great. Right now I'm looking at the Yaesu VX-5. I've read some bad
things but the majority seems to think it's a good radio.

Thanks for any info.

Casey

This type of nonsense will become more prevalent until the narrow-minded ossified individuals finally die off. It's too bad since the poster of the original message seems from time-to-time on some of the e-mail lists to have some nice gear for sale though he's obviously a "dealer" and not a "ham" when he does this.

I've been licensed since 1955, at one time could copy (only with a typewriter) 25 wpm, but never really enjoyed CW. The Advanced Exam was much more difficult than the Extra and when I upgraded years ago at the FCC office after they took away privileges I had as a General I wished I'd been active on CW so I could pass the 20 wpm exam. At the time the pressures of work and family meant I wasn't really active on anything but VHF and then infrequently.

I DID hand in my CSCE for element 4B last Saturday and upgrade. There were probably 100 others waiting in line, many of them also upgrading to Extra.

It's too bad that "CW bigots" choose to help polarize the amateur community with thoughtless comments and attitudes. Might it just be a feeling of helplessness since they have no power or control in their own life? A good shrink would have a field day with their minds or lack thereof!

It seems to me these individuals are stuck in the past and it's hopeless. The FCC has decided how things will be so just vote with your pocketbook, buy nothing from people who express those sentiments and don't sell anything to them as you know they'll be making money by from it. Don't help them advertise by including their URL correctly in any comments. People with those attitudes will likely never act sane as they appear to slide into senile dementia. Maybe their sour attitude on amateur radio will hasten their bleeding ulcers as they slide into the grave.

Just remember there are some of us who welcome the newcomers and hope you get as much enjoyment out of all aspects of amateur radio as many of us have over the years!

Ian, K6SDE since 1955

Correct me if I'm wrong, but I don't think there ever was a 220 MHz
module for the Yaesu 726. I thought there was only a 6, 2, and 440
module available.

Rick,

I made a mod on the ant. Well.. I replaced the JUNK coax with some good RG8X. Shortened it to the length I needed. It cut the noise in half and the reception was noticeably much better. I will be on the road tomorrow so I will give it a good try out. I also added a ground tap that screws onto my roof rack.

Believe me, the coax that comes with the ant was CHEAP!

I have 2 ft-50r's for sale. The first one is in mint cond, 9 out of 10. It comes with
5 watt battery, antenna, manual, charger, and case. The case has been on the radio since it was new. I have only used this radio in my house for receive purposes only, very very low tx time. The second one I have used a great deal. It comes with 5 watt battery, pl-259/sma adapter and thats it. The radio does not
want to tx. I think the tx button went bad or ? It powers up fine. I will take $200
for both radios. I will not seperate package.
Thanks
Tony

Thanks for the responses. I know about the switch inside to limit power to
50W, but since I am not always using my linear AMP, I do not want to use
this switch.

Can't I apply a small voltage with a battery to the ALC input? That is what
it is for, isn't it?

The following article is the first installment of a new monthly column that will be appearing on http:www.adi-radio.com.

* * *

What's the FREQUENCY, Kenneth?
By Ken Collier, KO6UX

On April 28, 2000 something amazing is going to happen, something that could have a profound effect on the future of amateur radio in the USA for years to come.

No, it isn't license restructuring. By April 28th the dust will have begun to settle on the license restructuring issue, leaving behind a simplified amateur radio license structure and the largest flurry of license upgrades in history. As exciting as the new license structure is, it is overshadowed by the potential ramifications of April 28th. That's because on April 28th, ham radio goes to the movies.

The new movie Frequency is a sci-fi action thriller starring Dennis Quaid, Jim Caviezel, and ham radio. It opens in most U.S. cities on Friday April 28th. By now many of you have begun to see commercials and trailers for the film.

The movie, itself, features ham radio in no small way. The basic plot involves ham radio signals reaching across time, as is evidenced in this excerpt from the official movie web site (www.frequencymovie.com):

"What if you had the chance to travel back in time and change just one event in your life? For John Sullivan (Jim Caviezel), there is no question. He would undo the events of October 12, 1969, when the out-of-control Bruxton fire took the life of his father, a heroic firefighter (Dennis Quaid). Now John may get exactly what he wished for . . . and much more than he bargained for. One day before the anniversary of his father's death, in the midst of the spectacular sky storm known as the aurora borealis, John Sullivan discovers in the house he inherited his father's old ham radio and begins to play with it. Through the electrical static, he finds himself talking to a man who claims to be a firefighter and who appears to be awaiting the World Series of 1969. Is John really talking to his own living father on the very same day, in the very same house, but exactly three decades ago?"

As an amateur radio operator, it is exciting to see our hobby so prominently featured in a major studio movie like Frequency, and I see it as an incredible opportunity. Without a doubt, Frequency is the

single most important thing to happen to amateur radio since single side band supplanted AM as our mode of choice. Frequency offers us, as amateurs, a unique opportunity to do something that we, as a group, are normally bad at: promote the #@$& out of amateur radio.

I am convinced that if amateur radio is to survive as a viable institution through the 21st century, that we are going to have to get the word out about what it is that we do. Think about it! If city governments and housing associations really understood the long distance emergency communications capabilities of ham radio, would restrictive antenna ordinances and covenants still hamstring hams? Or would communities instead be encouraging hams to erect towers and antennas for emergency communications use?

The problem is that few people outside of amateur radio have an accurate picture of what hams do, of what we are all about. Many people don't even know that ham radio exists, equating hams with dreaded Citizens' Band radio operators. Restrictive antenna covenants and declining number of new amateurs are both the direct result of people not knowing about the great hobby and service of amateur radio.

So, think of Frequency as a chance to educate the world about the fun side and the serious side of amateur radio. Whatever you do, don't just let the movie go by: DO SOMETHING ABOUT IT. Now is the time for your club to organize. Approach the local theater owner about the possibility of having a club table outside the theater during opening weekend. Pass out brochures on amateur radio. Do a HF or satellite demonstration showing off the long-distance capabilities of amateur radio.

As hams, many of us think of the exciting elements of ham radio as being commonplace. The average person doesn't. You can instill a sense of magic and wonder in people by showing them how it is possible to talk around the world without any wires connecting you to the person with whom you are speaking!

We at PREMIER Communications feel so strongly about the positive effect of Frequency that we have joined with the American Radio Relay League and several other companies within the amateur radio industry. Together, we are co-sponsoring an award for the amateur radio club that does the most spectacular job of promoting amateur radio in conjunction with Frequency. The winning club will receive a donation of a sensational amount of amateur radio equipment, including an ADI AR-147+ 2-meter mobile. The exact details of the contest will be announced by the ARRL shortly.

So get out there and do something to promote amateur radio. If everyone does their part, the impact - like the movie - can reach across time, helping to mold a positive future for the greatest hobby in existence.

i've mentioned before that i bought the radio shack headset mic for ht
use and cut off the headband part. the mic unit then was slipped into
the lining until the earphone nestled into the earcup of the helmet.
the mic ended up just right. vox or ptt is selectable and not very
prone to noise considering. still use it.

I know this is a very difficult question to answer but Iï¿½ll ask it anyway. I wondering what the average range for a 5w HT (with the normal HT antenna) would be? Considering I would not be on top of a mountain or deep in a valley but just in the normal hilly countryside of New England.

Thanks for any info,
Casey

Ken,
Do us all a favor, don't promote anything. That the
ARRL is pronoting it is bad enough.
Can't you just imagine the 'fall-out' from this movie?
Oh boy! Lots of 'new' people wanting into the hobby so
they too can 'dream' of doing courageous things! Thats
all we need. Then, when these 'new' people realize that
ham radio isn't exactly as depicted in the movie, maybe
after they've invested a few bucks in preparation and
equipment, can you imagine the nice, warm, 'fuzzy' "I've
been had" feeling they'll leave with? Thats all we need.
The people making movies probably know more about
how to promote them than we do. Why don't you let them
do it?
'Doc
PS - And no, thats not being pesimistic, it's being
realistic.

>
>Can't I apply a small voltage with a battery to the ALC input? That is what
>it is for, isn't it?

I've heard of folks doing this with some Icom and Yaesu rigs to get
them to work at QRP and QRPp levels, so I would think you could do
the same thing with just about any rig. Try a 1.5 V battery and a
potentiometer and see what kind of results you can get. If 1.5 V
isn't enough, add more batteries, or perhaps jump up to a 9 V unit.
Once a suitable level is established experimentally, build up a
voltage regulator circuit using an LM-317 adjustable regulator IC
and run it off your +13.8 VDC source. You might want to call the
Alinco folks and see what kind of ALC levels the rig runs at, and
that might give you a starting point.

For Sale:

SP50 VHF 10ch. 5 watt 145-170ish Mhz with 2 batteries, battery charger and drop-in charger cup. Radio is in excellent condition, electrical and otherwise. Case is like new with only a tiny scratch or two. Works great doing scan, QCII, etc. missing beltclip. Charger in photo (right) is for battery only, will not accept radio, but there is a brand new battery included along with a used good batt. so you'll always have one charged. Charger cup is drop-in but the transformer to plug it into the wall is long gone. (should be easily attained.) Batt's are datecode 97 and 99, one working fine and the other never charged yet. Can have programmed prior to shipment. Radio is '96 datecode, model P93YQT20G2AA, NO-DOA
PIC URL: http://www.picturebay.com/myimage/6/2064423380-1840497287-1.jpg

Maxtrac 300 Mobile VHF 16ch. 45watt. 136-174 MHz. The radio is in great condition, and the only reason I dont' say excellent is due to the noted stuff in the pics....
Please be aware that the pics are waaay overexposed with bright light to make the blemishes really stand out so you can see them. I like to be as accurate and honest about condition as possible, so the drip stain on the display is almost invisible in room light, and totally invisible when the radio is on. Doesn't muck up the channel display.... and the rubs on the bottom are, of course visible, but not as vividly as in the photo. In other words, not visible at all to the casual observer.
otherwise, radio looks great, tested tx and it is full output as well.
Factory radio, tags intact, model # D43MJA7DA5CK. No DOA.
PIC URL: http://www.picturebay.com/mypix/21/2064423380-1457062260-1.jpg

$500 shipped, insured. If interested, please email direct!
thanks,
Randy

Source record: 81272

Greeting Casey,

I have two VX5s and I love them! I don't know what bad things you heard
but here is may list of pros and cons:

cons:
1. Metal case that gets HOT on xmit with external power supple.
Solution: Use a speaker mike and don't hold it.

2. Soft reset on voltage change. Solution: either don't change
power source and power cycle it before you do.
3. Power and speaker/mic plus on the side instead of top.

Pros over other HT I have looked at:

1. 1.1 Amp/Hour battery. Lots of power for a HT. This was
the selling point for me.
2. Easy to program for the most part from the front panel
3. Small
4. Great bunch of VX5 users on onelist.com
5. great hand warmer in the winter ;-)
6. It charges when on.

From: Jack Schuster <w1wef@snet.net>
Message-ID: <38FCD372.FDBDF9B3@snet.net>
Source record: 81277

W1WEF IC706 AMPLIFIER INTERFACE

To control an amplifier relay from an ICOM IC706, it is necessary to use

the 13 pin DIN accessory connector on the rear of the 706. The 706 can only sink 20 ma max, at low voltage. Most amplifiers require more current than that, and some like the Heathkit amps have 125 VDC or so open circuit which could damage the 706 if connected directly to the radio.

The W1WEF 706 AMPLIFIER INTERFACE plugs into the rear accessory connector, and provides an isolated phono jack to which you can run a cable
directly to the relay connector on any HF/6M amplifier. It can switch up to
250VDC @ 1 amp. ONLY $29 plus $3 S&H. (Also available for VHF amps at the same price, or
for HF & VHF for $39 plus S&H)

Order from Jack Schuster, W1WEF, 408 Thompson St, Glastonbury, CT 06033

Having just bought an HT and played with it a bit, I can tell you that
the stock antenna on mine is only slightly better than a dummy load.
A Comet 17" flexi whip made all the difference in the world. With
this antenna I can hit all of the local repeaters from inside the
house. With the stock antenna I had to go outside. Bigger is better
in this case...

I've already had my go-round with K7JOE. You missed his T-Shirt offer. You would have really enjoyed that one. FWIW, I would have figured an old Extra

license would be worth more than a measley 5% discount.

Murray,

Thank you for having the integrity to do this, and in public. As a no-code tech with a sleep disorder that will forever prohibit me from keeping alert enough to learn or copy code, I appreciate the gesture. I am always told to "stop whining". The problem is, most of the ones giving me that tidbit of information are usually present for me to repair their rig, program their memories, explain theory or solder a PL259 on their coax. If that earns a 5% discount, let me pay retail.

Think line of sight. It's better than that, of course, but that's the essential determiner at work when you're talking about hilly country. In a normal suburban area on flat ground with good antennas and 2 5W HTs, maybe 3-5 miles. With repeaters on hills, 10-60+ miles. As an example of a longer path, with a halfwave antenna, I can talk on a 440 repeater about 120 miles away that's *just* on the horizon for me because it's near the top of an approx. 9000ft AGL mountain. But I'm lucky to talk across town (5 miles) directly to a friend with an HT.

So...your buddy a half mile away on the other side of a hill may be no go, but you might easily be able to connect 10 miles down the valley.

One other thing...a halfwave antenna dramatically improves the range of an HT over a standard short rubber antenna. It's more or less the same as a 10x power increase (better, perhaps, because it 'hears' better also). Elevating the antenna is also very effective, of course.

-Paul C. KG0CZ

Lately I've been seeing a lot of solid stateand tube amplifiers om E Bay
which
are advertised for ham use on 10 meters, usually with a disclaimer that
use on
27 Mhz is illegal. Of course these are the cheap amps used on 27 Mhz
that aren't
very linear or even well contructed.

The curious thing is that the sellers mostly refer to the unit as a
"bi-linear Amplifer". That brought some puzzlement.

Anyone know what a bi-linear amp is?

Replacing the antenna on an HT brings in more signal for sure..... but also
a ton of intermod with it!
at least thats the case with my W32A and I would suspect with most HT's.

Mark,

If I'm not mistaken, the ALC input isn't a static voltage input. If it was, it would be a whole lot easier to just provide an adjustment. What the ALC does is provide a constantly changing signal from the amplifier back to the transmitter.

That refers to the fact that it has a receive preamp.
Or, loosely, it amplifies bi-directionally, if you will :)

I have a nice clean Icom 735 transceiver for sale. I took it on trade played with it for awhile to see if it works OK and now its time for it to find a new home. It is in very nice condition cosmetically except for some scratch marks on the sides. It still has the little plastic cover on the front panel for the controls. I do not have the owners manual, only the microphone and power cord. I will ship this nice compact little rig to your doorstep (lower US 48 only) for $500. I can send pictures on request.

Dang, Dave, on the looong list of Creative Excuses, you've
come up with yet another new one, just when I thought I'd
heard them all. You're way too sleepy to learn Morse code,
but when it comes time to hit the books you're wide awake
and all ears. Yeah, Right!
Hey, if you can't, or just don't want to, go out and find
yourself a good buddy who can sell you a code test, like the
rest of those who just don't wnat to. But stop kidding
yourself. You're not fooling anyone else.

Pretty much line of sight. If you can see the other station (repeater or another HT), i.e., nothing to block the signal, you can work it.

73

In a previous article, Casey Hoch <choch@nhptv.unh.edu> writes:

Unless you have an older HT like the Radio Shack HTX-202 that only
receives 2M signals....and doesn't get intermod tied to a 5/8 whip!

Wide receiver range has it's problems....

Source record: 81106

This is a relatively old topic, but I've seen several versions of a mod to the Yaesu FT-530 to increase the tx and rx frequency ranges. The mod is accomplished by removing a solder bridge from jumper pad 13 or clipping a wire that acts as a jumper. Does anyone have experience with this, and does it work well?

Hi all--looking for input on solar power to supplement and maintain a small battery, say 12 volt, 12 to 18mah, sealed lead acid, to operate a 706mkii portable with wire antenna, mostly ssb and some cw. I know full power will not last long but could operate initially at full to establish and then use minimum to maintain (isn't that what the rules say anyway!) I see AES has a flexible panel but the price is very stiff--almost $400.00! 32 watts/12 volts gives about 2.6 amps output=very adequate, but where can I get something cheaper and maybe just as good? Would something on the order of 500ma to 1 amp be adequate to maintain? what do the Field Day users do? Any help is appreciated as this is my first try at this--looking for horsebackers, packpackers, canoers, camper input. Thanks.

Check out the going price on eBay. I would estimate one in excellent condition at $375-415. There is a slight difference check your lower right knob. Most folks would want to make sure you have both P.B.T. (pass band tuning) and the notch filter. Not all R-71A's have both due to a lawsuit. Hope this helps. Pat K4AVO

I have for sale in excellent condition a Kenwood TM-3520A 220 Mhz mobile.....On a scale of 1-10 its a 9.5.....It comes with the manual, MB-10 quick release mobile mount still in the plastic, the MC-42S up/down hand microphone and the optional TU-7 tone unit.....I will take $275 plus shipping and can be reached at (508) 821-2993.....WZ1U Steve / Lakeville, Ma.

3505. Re: Good RF Ground ? Speaker Wire ??

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-19 00:00:00 UTC
From: Jim <Jspaz@i-55.com>
Message-ID: <38FE2FC6.255A1D62@i-55.com>
Source record: 81121

You asked a good question. You will get as many answers as the number of people you talk to plus some. There are two separate issues in the questions on RF grounding and lightning protection. Try to remember that high current flow likes to see a low impedance to go through.

In other words, bigger is better for the high current lightning bolt protection. Keep the bends in the wire to a large radius. No sharper that a 6 inch radius. try not to go through any metal pipes, under any metal clamps, or through any metal panels. All of these act as a choke to impede the flow of high current and short rise pulses from lightning.

A good rule to remember about ground rods, more is better. Only just make sure you space them out far enough apart. Most engineers will tell you that the cone of influence around a ground rod is about equal to it's length. In other words, space the ground rods about twice the length apart. If you use 8 foot rods, space them 16 feet between each other.

The number of ground rods will depend on the soil resistance in your yard. This varies greatly from one area to another. If you have sandy soil, a short ground rod may not be enough. It may take a number of rods to get the resistance down to an acceptable number. A tight connection at the ground rods is important. An exothermic weld is the best connection. These are a little expensive for the normal ham operator. They can be had from the local electrical supply warehouse. Only problem, the molds to use this method, run around $150 plus. You may find a local electrician that does this kind of work.

In the communications field, the site grounding system goal is about 5 ohms. If you get 10 to 15 ohms, you should be happy. You need to try and measure a single ground rod and make your plans from that point.

As to the RF ground, it again is a matter of low impedance. A good ground wire can be made from the outer shield from a piece of RG-8 coax cable. The flat braided wire comes close to what you are trying to accomplish. You need to look at the problems you have to determine just how much ground you need. Just remember, keep it as short and direct as possible.

This might seem like a long answer to you, but a short
school on grounding generally will last 3 to 5 days of 8
hours each. Hope this helps in your solution.

Jim

Get the *word* out too? I thought the dip-shits only wanted CW out.

>The problem is that few people outside of amateur radio have an
>accurate picture of what hams do,

Restructuring supporters and code haters are in the same boat, they don't know what Hams do either.

>So get out there and do something to promote amateur radio.

I tried to improve & promote, but the ARRL had other plans. Promoting amateur radio would've harmed their membership drive fundraising efforts. So they took a look at the success of the citizen Band service in attracting users and selected "Lower & Slower" as the new ham standard.

"CBer's will feel more at home, if more hams feel like CBer's and we can collect more membership money from stupid people because stupid people are stupid and don't know value and are easily suckered in, and the League will come out the WINNER!, YAAAAA! and we can sell more advertising to Kenwood & ICOM, YAAAAAA! And we'll start running Cobra CB radio ads! YAAAAAAAAAAAAA!" (statements from a secret ARRL Fundraising PEP rally)

I am looking for a manual or schematic or both for this Bearcat DX1000 receiver. I just found it at a yard sale and it looks, like new, but it was broke! Got it running but I need info to find out how to operate it HI HI. It also dont go down to the low end of the frequencys that it is supose to, seems to stop at 100 khz. Goes deaf.Not too much info about this rig. Looks real nice and sounds good. Bearcat don't know about it cuz I guess it was made before Uniden bought Bearcat out.

I haven't solved it, and I also have that problem, to the point where my Icon 706 MkII can't be operated on AM mode at all. I have a 97 Toyota Tacoma, and with liberal use of ground straps between all body parts, I can operate quite well with SSB, etc...

I am considering a diesel for my next pickup purchase (but I've also heard that some Ford PowerStroke diesel owners have had problems with noise...)

In spite of all that, I really like operating in a mobile environment :-)

Message-ID: <OwtL4.4440$pJ2.610435@news.pacbell.net>
Source record: 81135

With the advent of dual same band receive (VHF/VHF and UHF/UHF), the next question that comes to mind is:
Are there any mobile dual band radios that will do same band repeat?

Cross band repeat is great as long as the HH is dual band also, but same band repeat would be nice.

From: jflanders2@home.com
Message-ID: <38fd1428.344748525@news>
Source record: 81213

UPDATE:

The 706MK2G works fine on FSK PACTOR. I was using a 350 Hz filter in the early testing, and must have not been centered properly. The PACTOR is working now.

FSK is the designer's intended mode for HF digital on this radio. Since posting the earlier query, I have learned that _only_ guys trying to use AFSK have been having T/R timing problems with it.

Nope that's about where I have to set mine too. The Heil mike is
just not as hot as the Icom SM-8 I was using before. You can spend
$50 on the preamp or you can turn the mike gain up.

Kenneth,

I agree with many of your comments. The movie is a gift to ham radio and we should use it.

We have been mentioning the movie to 6th graders in our Radio Coach classes so they have been primed to respond to the movie advertisements that will soon be in the newspapers. Our 6th grade class has been coached on radio, science and electronics for the past 10 weeks by 9 different hams that visit their class room.

I saw FREQUENCY April 15th in a preview showing (one show only) in Rochester, NY. It opens here on April 28. I liked it a lot and put a small review of it on our club's web site.

Here's hope for a rejuvenated hobby of amateur radio. I appreciate what the hobby was in the past, I enjoy it now, and I embrace the change that will come in the future.

73,
Peter, W2SKY

Message-ID: <38FD7492.482BE117@arcormail.de>
Source record: 81236

Hi!

After a long time deciding which tranciever to choose, I decided to
focus on a TS-850sat. I have a concrete offer about ~1000$, including
manuals, 1,8khz, 500hz and 270hz filters, antenna tuner, no scratches,
non smoker, first hand.
i donï¿½t know how old the rig is, and I have not seen it yet.

If I go for it, what should I look after? Are there any known/typical
problems?
Serial No.iï¿½s to avoid? Any hints and suggestions are welcome.
How difficult is it to use it with a transverter for 2m?
Is the price ok? What should I ask the owner about the rig?

Thanks for your help

Vy 73 de Marco, who has just upgraded to a cept class 1 license :-)

I have a really clean TS530SP for sale.

It is excellent condition cosmetically. No scratches...Face is perfect.

Works as new....on all bands (into dummy load). Have had it on the air on
10 meters and gotten very good reports.

Very sensitive & quiet front end. Has CW filter.

You will not be disappointed with this one!

$450.00 Shipped to you via USPS.

I tried supplying constant voltage to the ALC input to reduce power with IC-735 and it worked pretty well. Just all the changes were in a very short range, say -4 to -3 volts so tuning had to be careful. I can't remember whether there were any variations from band to band. Ignacy, NO9E

>If I'm not mistaken, the ALC input isn't a static voltage input. If it >was, it would be a whole lot easier to just provide an adjustment. What >the ALC does is provide a constantly changing signal from the amplifier >back to the transmitter.

Heathkit SB-100. 80-10 meters, 100 W output, kit made in the early-mid 1960s.

It has been described as "vintage" and "antique" but it's really not that old. And it's a pretty decent rig for the money.

The rig in "Contact" was a Collins KWM-2. Couldn't tell if it was winged or meatball, though.

Hey Ya'll:

A friend of mine who does not have internet access has asked me to try
and locate a copy of the schematic for a Macaw PS-21 power supply.
I have already contacted Macaw Electronics and they were of absolutely
no help whatsover. This power supply was discontinued in 1986. I
believe that it is a small DC power generating around 14 volts but I am
not positive.
Any help in this regard would be greatly appreciated. I will of course
be willing to pay for your trouble if a copy of this schematic could
be secured.

Thanks in advance!

Hi Andrew,

I have an IC-756 and the Heil Pro with HC5 cartridge. I have
configured mine as follows:

Mic Gain 12 o'clock
Compression 12 o'clock
Bass +4dB
Treble +10dB

The ALC reads about 3/4 at peaks. If I use the HM-36 hand mike I set
the positions at 11 and 11 with the same bass and treble settings.

On air reports have been very favourable. Give it a try.

Good Luck,

Ben VA3BSF

From: William Phinizy <k6whp@gte.net>
Message-ID: <%2GL4.368$v%.84293@dfiatx1-snr1.gtei.net>
Source record: 80896

I got down to it today and have these items that haven't been
(over)used in months. I thought someone would be interested:

Palomar Engineers R-X Noise Bridge. $25
Clean, work fine, with "manual" such as it is.

Mirage MP-1. $95
Also clean, with manual and diagrams. Recently calibrated against my
Bird.

Kenwood TS-440SAT (antenna tuner), MC-60 Mic, and PS-430 power supply.
$680
Great HF rig for "new" Generals. Includes CW and SSB filters. Clean
9/10 with scratches on the case (but not on the front panel!). Full
power out on all bands (for those who *really must* do that sort of
thing). Includes op manual and mobile power cord (but rig was never
run mobile).

S&H would be from Southern California and all of the above are OBO. I
would like to keep the Kenwood as one package, however.

72/73,

Bill

I don't think you need a ticket to buy a ham rig. I may be wrong, but I
don't think so. So unless I'm wrong, a cb'er buying a ham rig is legal
as long as he doesn't use it on any band he doesn't have a ticket for.
On the other hand, an amp sold for ten meters is illegal no matter how
you look at it. And the likelyhood of a type acceptance is large. Not
too comparable. MK

I use DX4WIN, which includes all of the features you mention, as well as many others. Upon entering the prefix of a call, the software displays the country name, the beam heading from your QTH, and a grid that highlights the bands and modes on which you have QSO'ed that country. If you wish, it will also display a world map with the great circle map to that destination.

With an internet connection or a packet radio, it will also monitor DX spots and display, in color based on priority, the WAZ or DXCC requirements - Priority being things like: need this country, need this country on this band, worked but no QSL card yet, worked this exact station... etc)

With the right connections and gear, it will also turn your beam, select the right antenna, and set your rig for the right freq and mode... too much for me - next thing you know software will be making QSOs without my being there ;-)

I have stopped using a paper log.

I just recently bought DXBase 2000 ($105!) after auditioning every other Windows logging program I could find. That is not to say it is the best, it's that the only way to try it is to buy it :((

I have been pretty (maybe over) critical of some "features", but there is a reflector (dxbase@qth.net) that you can check into and the vendor has been very responsive, although sometimes they don't really answer the question completely.

Try going to http://www.dxbands.com/softlog.htm for links to a lot of programs. Most (except for you know who) have some form of crippled demo that you can try.

Of all I tried, knowing what I know now, I probably would still buy DXBase, but it takes a while to navigate the program. The developers say that is because it is so powerful. I say that it is because it isn't particularly user friendly at first, but that holds true for an awful lot of software. Software people don't think like real people do.

DXBase is more or less a shell for Microsoft Access and the file size becomes huge (and mostly empty). I log on a laptop without a zip drive and when you've put your whole ham career on a disk drive, you really want to have backups. So far, I've been able to zip the database and get it onto a floppy. I don't know how much longer this will be true. After that, I guess I'll have to keep multiple logs. It is also slow to open and close or to update the tables with *only* a P150 and 32meg of RAM.

Be advised, DXBase2001 has been announced. Make sure it's not going to cost you for an upgrade.

Disclaimer: This is my opinion. If I made any factual misstatements, they are inadvertent and I'm sure I'll hear about it. I always do.

Good luck and 73,

Wes Stewart N7WS

Well, you're pretty close...

You're right, anyone can buy a HAM rig. I bought my Swan before
I was licensed and it was my incentive to learn code and get the
ticket. Then I bought my 2M HT before I had my tech ticket, and
it was my incentive to get to the FCC office and upgrade.

My ex bought me an Alinco dual bander for my birthday. I wouldn't
to business with a place that pulled crap like only selling to HAMs,
or places that only sell equipment to certain classes of licenses.

But to the issue of 10M amps. Yes, they are illegal to manufacture.
AND possession can be considered evidence of use. But HAMs
are legally allowed to build their own. AND HAMs can legally
sell them. So just the fact that they are on EBAY by itself does
not consitute an illegal act.

To further complicate this, HAMs have been known to 'pick up'
some of this illegal CB amp equipment, and use it as a starter
or building block for their own 10M equipment, which again, is
100% legal.

Mike

Try XMlog available at www.xmlog.com for the very reasonable price of
free. It's Windows based and the author makes periodic upgrdes to it. Not
the best contest logger but great for everyday use.

3587. Kenwood TM-741 Multiband gone Kaput!

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-20 00:00:00 UTC
From: Jeff Parker <wa1wxl@vnet.net>
Message-ID: <MXOL4.285$UI4.13797@ralph.vnet.net>
Source record: 80917

Any one got a Kenwood TM 741 laying around with a good microprocessor board
they want to get rid of cheap?

I sent my TM-741 back for Kenwood to repair due to a freq drift problem in
440 mhz, and the tech called me and told me that it would be $300 to repair
it as the ground wire connection had broken off causing more phantom grounds
and moredamage!
Now the radio thinks the 440 modules is a 1200 mhz module and the 144 side
acts flakey! Anyone got any suggestions? Looks like the 2 modules are OK.

3588. Re: looking for a 6m vertical

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-20 00:00:00 UTC
From: Ed Woodrick <ewoodricknospam@ed-com.com>
Message-ID: <OmPRk5zq$GA.307@cpmsnbbsa04>
Source record: 80918

The bottom section of most HF mobile whips is usually cut to be resonant on 6.

For more gain, look at some of the Diamond and Comet antennas. Some of the multiband antennas include 6 meters.

If I'm not mistaken, I believe that a lot of the 6 Meter SSB stations are going to be using horizontal polarization. If so, then you lose a few db automatically.

I agree about the problems associated with the W32A and larger
antennas! I have a through-glass dual band antenna on my car, and it
works great with that rig. When I tried a 2m 5/8 antenna on the top of
the car, I got much worse overall receiver performance that was traced
to intermod.

Yikes!

Source record: 81047

I have the following for sale:

1) Icom 730 HF rig... 10 - 80 meters. 100+ watts... Grt shape.... $375 + shipping... Makes a great mobile or base rig. Not a thing wrong with this rig.

2) Icom 27A.... 2 meter mobile rig.... 5 / 25 watts... Would make a great starter rig or packet rig. $110 + shipping.

3) HTX 100.... 10 meter hf rig.... 5 / 25 watts out..... great dx rig. I have made lots of contacts on this rig. $100 + shipping

4) PDL II... Makes a great 10 meter beam. $100 + shipping.

Let me know quickly. I just purchased new hf rig and need a little cash. These will all go to EBAY for auction by Sunday, if no one speaks up soon.

I have an MFJ 207 analyzer there now.....http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=310171092.. This little analyzer has done wonders for me in building dipoles and getting them trimmed exceptionally well for given frequencies.

Pls email with interests...

Bill

3597. TS870/SB221 Question

3599. LDG QRP Tuner F/S

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-20 00:00:00 UTC
From: tnic <tnic@erols.com>
Message-ID: <8dltm9$pq3$1@bob.news.rcn.net>
Source record: 81050

QRP TUNER $100 + 10 Shipping and insurance.
See photo links are end. Contact Tnic@erols.com
Will ship next day if you pay with Money Order. Checks must clear before shipping..

Automatic LDG QRP Tuner Push the button and your done!!
A great little QRP tuner will tune 1:10 or lower to 1:1.
This tuner was purchased factory assembled by LDG. Not a kit.

Uses hardly any power and tunes FAST.
Tune the frequency you want and press on button and it tunes 1:1 in about a second.

I use this tuner with my SGC 2020 radio in the field with a small Gell Cell and solar pannels to recharge the battery while on a 2 week kayak trip.
PERFECT CONDITION.

The LDG QRP Automatic Antenna Tuner is based on the AT-11 design with attention paid to reducing size and power consumption. The tuner is a high efficiency, microprocessor controlled, switched "L" network designed to work with Dipoles, Verticals, Inverted Vees, Beams or any coax fed antenna in the 1.8 - 30.0 MHz range. It's small size weight and performance make it
perfect for QRP. Rated to 30 watts. LDG says it will handle 50 watts.

The enclosures are made by Ten-Tec (same ones that make radios) and are all aluminum. painted with black top and beige bottom. FULLY ASSEMBLED.

Specifications:
- Factory assembled (by LDG) and ready to use.
- Enclosure size: 5.0 x 7.5 x 1.25 (measured in inches)
- Weight: 4.2 oz.; 15 oz. with enclosure
- Configuration: Switched "L" network
- Inductor range: 20 uH
- Capacitor range: 2700 pf
- Tuning time: 0.1 to 3 seconds, 1.5 average.
- Current consumption: 10 to 190 mA, 75 mA average.
- Voltage requirement: 11 to 14 volts
- Microprocessor Controlled
- 1.8 - 30.0 MHz Coverage
- Tunes 6 to 800 ohm Loads
- Power Range: 0.1 to 30 watts continuous
- For Dipoles, Verticals, Vees, Beams or any Coax Fed Antenna

$100 + $10 shipping and insurance.
Contact Tnic@erols.com

Will ship next day if you pay with Money Order. Checks must clear before shipping..

I've been using my TS-870 and SB-220 for several years directly with no
problem. That said, I should probably buy or build a "soft switch" device
to operate the relay and protect my TS-870. Think Harbach has one.

I doubt it, unless some terrific new technology has passed me by. On 2 meters the 600 kHz split is too close to prevent the transmitter from getting back in to the receiver without large, multiple filters on both the receive and transmit. They are called duplexers, and cost a lot ($2500 for example). On 440-450 MHz, the split is 5 MHz, and the filters are 1/4 the size of the two meter ones. Still expensive and not something that one would pick up for casual use.

I can't believe the FCC wouldn't be interested in that. Heck, they shut a guy I know down for selling "non type accepted" amps for ham use. He has since applied for , and received type acceptance now I believe. But if they would go after him, for selling amps to hams only for mostly low band use, it would seem they would be interested in the sales of "ten" meter amps, which in itself is illegal. Not to mention the lack of type acceptance. I bet they go after them eventually. The clock just runs slow for the government. So many radio crooks, so little time.... MK

Nope, I don't use or need a shack ground either for rf purposes. The
only "real" need for a ground in the shack is for shock protection. The
lightning ground system is mainly outside. In my case, it's ALL outside
as I ground out my coax when stormy outside. My shack is isolated from
ground in that case. If you are using balanced antennas an rf ground in
the shack is not needed. Also a ground wire in the shack does nothing
for rf. It will still be there even with the ground wire. The cure for
rf in the shack begins with the antenna and feed system. This will fix
the "real problem" which is usually common mode currents flowing on the
feedline. Cured with a balun/choke etc. Trying to cure rf problems with
ground wires is like trying to put out a fire with gasoline. Half the
time it just makes things worse. Curing the real problem a better
approach. Also , many times a improperly connected ground wire can cause
a load of lightning damage in a strike. What you are NOT connected to
can't hurt you. . MK

I need to add CTSS capability to an old workhorse HT.

Specifically, I need a Yaesu FTS-12 CTSS Tone encoder/decoder board for FT-23R Handi. This is a "one chip" board designed especially for the FT-23R. If you have one to sell or trade or know where I can get one, please reply by email.

Cheers,

Al Link

Dick,

I have come to expect that. The disorder is genetic, and when my elder brother was no longer to over come the symptoms and it crept into his daily routine, I took the same attitude that you have; until he crossed over the center line into oncoming traffic on a visit back home.......

I am not sure what the long list you are referring to is, but I suspect you read something into the message that wasn't there because the content resonated so well and you felt immediate guilt. This is not my problem.

As far as the books, I have forgotten more than I care to admit, and more than I am aware of until the next opportunity I have to try to remember and will continue to do so.... Dyslexia, inability to focus vision, inability to discriminate sounds when 2 conversations are going on, low blood pressure, slow heartbeat, low pulse, low body temperature.... all these are results of the body never being able to attain a level of alertness that you associate with being awake. If you want to ridicule this, take it up with the medical community in the field of neurology and share your expertise with them. They will get your number immediately and give you the recognition you so desperately need. While I can dismiss you as a quack \here, they can do so with medical authority. Wish I could change that, but the big guy prevailed when I presented that request. Maybe you are a higher power?

On the good buddy and buying the license, I have a little more integrity than that, and if you are making this suggestion due to a good memory, so be it. It is looking more and more like I struck a resonant chord, and you aired it out for the world to see, All I was doing was being honest. You really give the Amateur Radio Service a bad name with your attitude and remarks. At least I have made contributions to the service and its members, and will continue to do so as long as I am able, no matter what class of license I hold. That is the way I was brought up. We are beginning to see the effects of your childhood.

On the subject of fools and foolery, I will let the other's on the NG determine that. It seems to be more your problem than mine.
I do have to thank you for making the best argument in the shortest number of words why Murray's comment was so appropriate.
Maybe K7JOE can make you president of his Fan Club.

Cheers,

David

>
> WHAT? It's not really that old???

No, it's not. It's a CW/SSB transceiver, with performance numbers that
are not much worse than "modern" rigs. It lacks only a few features
(split/RIT capability, CW filter, AGC off switch, slow tuning rate)
that I consider really essential. The later SB-101 and SB-102 have
provison for a second VFO and a CW filter.

> Let's define "old," and "that old."
>
In the context of HF ham gear, 40 years is where "old" begins.

3619. FS: Collins 75A-4 & KWS-1

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-20 00:00:00 UTC
From: gharmon@idworld.net
Message-ID: <38fef121.210829996@news.idworld.net>
Source record: 81070

Hi everyone,

I have a set of Gold Dust Twins (75A-4 and KWS-1) for sale.

The receiver and exciter look really nice and have minimal cosmetic problems. There are some of the little nicks across the top front panel
edge of the receiver.
The power supply cabinet needs refinishing.
Original manuals.

75A-4 Receiver......
Serial number 2518
Chassis date 7/18/58
Works well
Extra BNC and trimmer adjustment hole on rear
Standard SSB filter
Collins 4:1 reduction knob
No speaker
$1,250 OBO

KWS-1 Exciter......
Serial number 168
Fresh 4X-250B finals
Partial alignment done
Checked out on 80 meters
Collins 4:1 reduction knob
Needs a piece of rectangular glass on the front panel

KWS-1 Power Supply:
Replaced four capacitors
New HV cable
Wired for 115V
PS to exciter cables
Fresh 866A HV tubes
Blower fan bearings replaced
New air hose
100V AC antenna relay included (requires DC relay)
Inside of the power supply looks great
$1,750 OBO

Would consider a nice SX-115 or SX-28A as partial trade.

Can take the twins to Belton on 29 Apr for serious examination and purchase.
Would also be willing to drive a reasonable distance for delivery.

Here are some pictures to review. Please contact me on the telephone
or
email for additional information or more pictures.

Depends on how well you get along with the guy. Changing the gap on the sparkplug would probably change the problem -- (may make it worse too) but playing around with that little spark-gap transmitter is one way to go.

It's almost Saturday and we still have tables available. We expect a strong turnout for this event. This will be the last posting for this event in this newsgroup. Just want to be sure all have an opportunity to be notified of this event.

The Eastern Idaho UHF Society will be hosting a hamfest/swapmeet in Idaho Falls, Idaho, at the Elks Lodge on April 22nd. This is an ARRL sanctioned hamfest/swapmeet with full license testing, swap tables, commercial tables, and talks on DXpeditions and APRS.

Main door prize this year will be a Kenwood TM-V7A. Other door prizes continue to be confirmed and will be posted on the web page. So, keep checking out our web page.

We have a web page - http://www.srv.net/~wa4vrv/hamfest.htm

Hope to see you there!

Where have you been living? It's a fact that more ham rigs have
been sold to illegal CBrs than hams for years. There's no way the
number of hams in the U.S. could provide enough business for
the likes of ICOM, Kenwood, and especially Yaesu.

He sure does, as do we all. My wife and I will prolly blow about $5000 on our renewed hobby over the next few years - none at shops like Joes. Moreover, enthusiasm for code will continue to wither as it has for half a century and will eventually disappear for all practical purposes as aging code freaks (no insult intended) die off. The good news is that amature radio will not die with them thanks to the new regs.

I will never get Joe's discount, but think that it is great that he is
somehow rewarding those that had the tenacity and skill to pass 20 wpm.
I started studying code in 1955 and got to 5 wpm in 1983. I don't think
I'll live long enough to get to 13 much less 20. I admire those that
have acquired that skill.

I can understand those that resent the restructuring. After all, I got
privledges that they had to work hard for. Well, don't worry, I won't
clutter up your code segments with 5 wpm code. Actually, I put my key
aside after getting 5 wpm and proceeded to forget everything I learned.
The restructuring was a godsend to me in that I won't be limited to 10
meters which is dismal when the sun spots are down.

To those that resent the restructuring, I ask that you consider that it
is easier for some to learn the code then others. I always wanted to
make music, but didn't have the ear for that either.

K7JOE, keep giving your discount, but think of it as a reward for those
that excelled rather then a punishment for us under achievers.

David,
That was the most well thought out reply I've seen in a long time.
Kudo's to you and congrats on your upgrade. Just ignore the old
farts who dont like change. They are the same gentlemen that when AM
came out didnt want to give up Spark gap. And when SSB came out
Screemed and hollerd about it and interfered with their AM stations.

They dont like change, and now are sold Crumudgeoned that they complain
all the time. These are the park bench grampa's that bitch and moan all
day. Unfortunatly, now they have a world wide media to do it.

May each day be better than the next, and may the Good Lord bless you.

And before crumudgeons accuse me of being a "Newbie" ham.

I started in 76, and all my tests but the Novice were at the FCC
office in San Francisco when I was stationed at Moffett Field. Code
was Send and Recieve and the Advanced was a B' of a test. But, I also
realise that ham radio is changing and will always change. We are not
attracting people with the advent of new technologies. I have elmered
quite a few folks lately with the new requirements that could most
likely design your ham rigs you use, but had no interest in Code. But,
now they are coming on board with the 5wpm. Who knows they may be the
next Rig you own.

Rick
KF7QZ, Still proud to be a HAM RADIO Operator
Somebody who is Curteous to his fellow man.

I have a strange situation. Quite a while back I purchased an NHRC-4 repeater controller kit. It sat on the shelf for quite a while waiting to be used. I recently started construction and discovered the PIC processor (16F84) is blank!

Does anyone happen to have the binary image or Intel Hex file for this chip?

Source record: 81085

I think it is great that those who have worked hard for years getting their 20 WPM code and working CW for as many years get a discount, they deserve it!

CW is not a dead art and never will be. It really does not float my boat but there is enough to amateur radio to interest us all, SSTV, FSTV, Packet, Phone, ARES, RTTY, Satellite, contesting and CW.

I am studying now for my 5WPM. I was able to pass my General theory without having to crack a book because I love this hobby/service and always am interested in learning. I do not wish to chide those who resent the restructuring. Some call it "dumbing down" the requirements. The reality is that CW is not necessary for ARES use and the number of amateurs over the last 10 years has been dwindling. If we continue to dwindle, our fine Federal Government will certainly take away some of our bands and auction them off for a pretty penney. If we grow and expand, the opposite may happen and we may actually get more bands allocated.... in fact I read in QST recently that the ARRL and the FCC is studying the 35 meter (I think) for amateur use.

I have the greatest respect for experienced advanced, extra and technicians and I would hope rather than resenting those of us that will get our General and Extra class licenses in the future, not resent us but Elmer us. We need your experience and your help for the entire worldwide amateur community to benefit. For those of us that do not want to accept elmering from experienced Hams.... you are not good operators in the first place to show such arrogance.

Please, those of you that would resent us and are experienced.... help us, don't hate us.

I've had both and between the two I'd go with the 746 - better receiver and QRM handling capabilities for crowded band conditions than the 920.

The 920 has a 'pretty face', but I was very disappointed with it's receiver and general operation - I kept my 920 about a month and sold it - the blow by in the receiver just drove me nuts and I didn't feel like spending extra money to get the problem fixed - (shame on Yaesu)...

FS: Technical Material Corporation GSB-1 SSB adapter. This adapter is factory ORIGINAL rack mount, very unusual in that the only ones I have ever seen before are table mount. I do have a manual copy for it. The physical appearance is very nice but in one part of the dial there is a very SLIGHT shading from possible exposure to the sun. The unit is alive and appears to work but I never use it. Price, $475. Mike (409) 693-1461.

The "bi-linear" refers to the fact the amp also has an RX pre-amp built into it. CB jargon says its a bi-linear, or amplifies in two directions. Quaint isn't it!

I have an '870 and an L4B. To save the relay contacts in the '870, I installed a power fet (IRF510 from Radio Shack) in the L4B to switch its relay. The '870 puts out switched 12V that I use to drive the fet through a resistive divider that keeps the gate voltage in spec (4 V as I recall).

I have a new-old-stock TCS-14 transmitter for auction on eBay.

The URL is

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=314106127

and the blurb is

This is an unused and unmodified new-old-stock mint-condition example of the venerable TCS-14 AM/CW transmitter. Found as-new in-the-box, never put into military service, with no holes gouged out for coax connectors, no manky power cables grafted into the case, no mouse nests in the wiring, or any other defect usually found with these rigs. Covers 1.5-12 mHz, AM or CW, and with the appropriate power supply (not included), I believe it puts out around 35 watts AM, 50 watts CW. The inside gleams like the day it was produced, the panel and chassis have no corrosion or discoloration. Includes cabinet and shock mount feet as shown. Some of the packing material is stuck on the large front handle, but that will be easy to remove. I may clean that and repost a picture so I can see this fine old rig in all it's glory before it goes out the door. Unless you have a time machine, you're never going to find a cleaner example of a TCS transmitter -- don't pass it up !

Closes 4/30/00

Thank you.

3670. Help! IC-706

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-21 00:00:00 UTC
From: luecknik@world-net.net
Message-ID: <39004a67.3793870@news.world-net.net>
Source record: 80944

Just swapped for a "nice" IC-706. Tough to program the features.
Problem is no signals from about 8mhz to 15mhz. Loud background noise
that increases if the pre-amp is turned on, but no 10mhz WWV, no
20mtrs, etc.
The instant it reaches 15mhz, WWV blasts through. Same instant high
reception when readout reaches 7.9mhz. All functions seem to work on
this "dead" section- - -except no signals. Has anyone had this
problem?
if not, back to Icom. Thanks James Lueck W5LWU

Basically, the bi-linear provides *two* opportunities for splatter
arising from *non-linear* operation. The first is the "linear amplifier"
itself and the second is the overdriven receive preamp!

More *is* better on 11 meters! ;^)

Hi folks. Recently obtained a Radio Shack DX-160 Field Effect Communications Receiver (whew! From now on it's General Coverage Receiver with this thing). Anyway, I'd like to locate the owner's manual (or photocopy of same) for this thing. I'm particularly interested in the manual because there seems to be two tuning knobs on this thing, and I'm not exactly sure how they are to be used in coordination with each other to produce accurate tuning and frequency indications (and no, one is not coarse tuning and the other fine tuning). If anybody out there has a copy of the manual - or operating tips for this particular model, I'd appreciate hearing from you. Thanks for your time, we now return to our normally scheduled programming...

It sounds like one of your VCO sections is dead. If the architecture is anything like my Icom 735, the synthesizer has several VCOs in the loop, each covering 7 or 8 MHz. The most common cause of failure, at least in the older Icom rigs, is the plastic trimmer cap. Use a mica trimmer when you replace it, or you may be fixing it again in a couple years. While you're in there, you may as well replace the caps in the other sections too.

My DX-160 is in storage, but what I remember is the main tuning know follows the ruler scales for the five or six frequency ranges covered by the DX-160. The other is actually a "bandspread" or fine tuning. The circular scale shows the amateur bands plus the CB channels. To use it you tune the main tuning to the appropriate red diamond for the amateur band, then use the bandspread for further tuning. The bandspread can also be used for the international shortwave bands using the log scale (it covers about 500 kHz.

It's me again. My brain wasn't quite out of "Park" yet this morning when I suggested it was the VCO section. I don't think you'd hear the noise you described if a VCO was out. To test, see if you can transmit OK on 20 m. If you can, your VCO is fine. I would then suspect the receive bandpass filters -- you may have a bad PIN diode switch. On the bigger rigs the Rx filters don't cover that wide a frequency swath, but on the tiny rigs they may use fewer of them to save space. Check the block diagram if your manual has one and you'll see.

Try sending the money then then you would have had it instead of
just saying that you want it with some weird story about how you want to
give it to your uncle for his birthday. Go buy him another gift instead
of wasting my time with your stories for two weeks. I'm sure your uncle
would like a brand new gift instead.
Have have great life! Chris

3689. Measure the polar diagram of your beam antenna

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-21 00:00:00 UTC
From: Bob Freeth <bobfreeth@dial.pipex.com>

PolarPlot is a program that measures the polar diagram of a beam antenna.

It runs on Windows 95/98/NT/2000 and uses an audio connection from
your transceiver to the sound card in your computer.

V1.60.1 has just been released and is a free upgrade to existing users.
I
f you are interested in knowing more about your beam antenna then take a
look at

http://www.bob.freeth.dial.pipex.com/polarplot

for further details and some screenshots of the program in action...

Donnie,
Nothing is better left unsaid. Here's the problem. As an old extra
I've lost priveleges that I once had. So did EVERY OTHER ham in
the United States (and yes, Virginia, even the 5 WPM extras). I dont
care who joins the hobby one way or the other, but I do care when our
priveleges are lost and the ARRL fails to recognize this point in all
their "Op Ed" columns. And when the FCC makes a decision that is not
done logically or democratically.

What have you and I both lost?

A) Exclusive access to certain band segments that are comprised of
operators with radio experience. Enough experience, in theory,
to have operated on the air and build on the air proficiency. I dont
know a single "old" 20 WPM extra who got his or her extra ticket without
operating on the air. I know lots of 5WPM new extras will not have
spent even a single day on HF before getting full access to all bands.
It's a pitty. To be a good operator, and excellent operator, one should
have experience operating. Kinda like driving -- you get a learners
permit
before being granted full driving priveleges. Now I must contend with
the same bullshit that ruined 2 meters.

B) Reciprocal licensing. Formerly, the US Extra Class ticket was
transferrable in many countries to a local license. I am a dx er. I
work much of the time overseas. I enjoy ham radio overseas. I am the
guy
on the other side of the pile up when you want to work that rare one.
I
can no longer get HF priveleges in several countries because now the
"highest" us license is still just a 5 WPM CW accredation. Most
nations
STILL require 12 WPM, some as much as 22 WPM for HF access. So, my
once
"widely accepted" extra class license now gets me the equivalent of the
2M
band in the US.....some "EXTRA" ticket, huh. Yes, some (a handful) of
countries are still lowering their requirements, but, there are 300+
DXCC
countries, and we have reciprocity with about 100 of those. Till those
100 ALL change, our list of places where we can enjoy ham radio has just
dropped.

Since I have lost what I really cared about in Ham Radio, with the sour
taste
in my mouth from a bunch of lazy 50+ year olds who could never learn CW,
I say the FCC should eliminate the CW element entirely. Then, all you
guys who "worked hard" for your 5WPM can see what the other side of the
fence looks like.

AND...when Incentive Licensing took away privileges of the 13 WPM General Class Licenses did you also raise a ruckus? Write the FCC, complain to your section manager(s), send letters to QST, CQ, 73, Ham Radio????

Some of us are now, after many years as Advanced (13 WPM) finally getting back, without going to 20 WPM, privileges lost during the old incentive licensing.

Might it not just be that many of us really aren't that interested in CW and therefore have never built our speed up to 20 WPM and you feel we aren't entitled to get back the privileges that we once had and had taken away?

Of course you categorize all as 5 wpm Extras.

I think reason and logic isn't one of your strong points!

Joe,
I do agree on the worked hard theory BUT !!!
times are changing good or bad they are changing.
having been a ham for only a few years and a 13 WPM General
for almost (2) years and I am certainly happy with the priviledges

my ticket affords me. that little piece of radio spectrum
that was afforded to Extras wasnt all that important to me and
still isnt. I have never looked at Ham Radio with the attitude that
I am better than you because remember this it is a Hobby
and with hobbies you promote friendship and so on.
I hope this sheds some light on things because remember
Things Change. instead of bad mouthing the new slow coders
be an elmer and invite them to learn the craft that you worked
so hard to be proficient in or just dont talk to them at all.
the choice is yours. 73 de op Donnie N4JZH ...-.-

Source record: 81021

TR-4C
MS-4 speaker
power supply installed in the rear of the speaker cabinet
Original owners manual

I sent in in to Drake about 7-8 yr ago to have it tuned up. When I got it back, I probably didn't use it for more than a month and then bought a Kenwood. About once a year, I fire it up and let it run for a few hours just warm it up and dry it out good.

It tunes up on all but the 15mtr band and one of the 10 mtr bands. (10 mtr is divide into three sections) If you wiggle the band switch knob just right, the power meter will jump just momentarily. So I'm pretty sure its just a bad connection.

Asking $275.

Located in the Washington D.C./Baltimore area if you can pick up.
If the buyer doesn't have a method through their work or a preference for shipping, I'll put in on Fed Ex two day for $25. Because of the weight (mainly of the power supply) it may cost a few bucks more than that to ship, but if it is, I'll cover the excess.

T.O. Galloway
E-mail to gonsailn@bellatlantic.net or

I have on ebay a matched set of Svetlana 4cx800a tubes. These tubes have never been used, and carry a 90 limited warranty from the Russian distributor. The tubes are Soviet military surplus, and are built to their very rugged specifications. The following amps use this tube. Alpha 91b and 99, QRO 2500, Acom 2000, and the new Emtron from Australia. These tubes are also a good conversion tube for the MLA 2500 Dentron that runs the impossible to find 8875 tubes. There is a conversion on the Svetlana website for the MLA 2500 using these tubes. I have a picture of one of the tubes on the auction site. If you want a steal on a great pair of tubes, go bid on these. The current bid is only $200.00 and a single tube like this sells for $179.00 at RF Parts, and they don't even offer a matched pair. So someone will walk away with a steal on these tubes more than likely. Maybe it will be you!

No, I did not. I was not born then. I was born in 1969 -- and at
age 30, I think it is pathetic that you old timers are so damn lazy.
Great example for the next generation:

"Gee sonny, dont do WORK...just wait and they'll CHANGE THE RULES"

Just what I wanna teach my two boys....NOT.

You're generation will have died off by the time my generation becomes
old and cranky. Till then, I wanna WORK for what I have. Not get it
for free....not change the rules in the middle of the game. I realize
some want to do this. Just not me. So, I will reward those who value
that work ethic. That's all.

I dont follow the rest of your post. I dont care if people get on
HF with ZERO cw. Hell...give em the whole damn spectrum without code.
I dont care. What I care about is that the HIGHEST license
class should still be something on par with the REST OF THE WORLD in
terms of requirements so we can enjoy priveleges. Hell....make it a
5 WPM advanced class and give them all frequency priveleges same as
extra. Then, make a 20 WPM super extra class --- for
those that can and want the 20 WPM
accredation, and most importantly, for those that want and need the
more widely accepted license for reciprocal use outside the USA.

Nice post Joe...your parents have brought you up well. Many will not understand the character that you talk about...so..they will flame you to no end. Their opinion means nothing in my book. The world is full of the give me more for nothing attitude. Nice to see the other side of that coin in print.

3708. Looking for Yaesu Programming Cable Or Schematic

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-21 00:00:00 UTC
From: Scott Bailey <sbailey@upgradebase.com>
Message-ID: <XB6M4.5966$pJ2.808144@news.pacbell.net>
Source record: 81032
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.boatanchors,rec.radio.amateur.homebrew,rec.radio.swap

I'm looking for the schematic or a cable to buy for for programming older Yaesu radios. I have a FTH-7008, although I believe the same part works for the following models:
FTH-2070
FTH-2008
FTH-7008
FTH-7009
FTH-2009
FTH-2011
FTH-7011
The cable I'm looking for plugs into the serial port and attaches to the microphone plug of the radio.
This is not the same cable as used for the newer VX series. That has a 4 conductor plug.

Any help would be appreciated.

Scott
sbailey@upgradebase.com

3709. TS-820s

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-21 00:00:00 UTC
From: Chip <chipNOSPAM@superlink.net>
Message-ID: <8dqtb8$2hj$1@earth.superlink.net>
Source record: 81033

I have a TS-820s, works well except for one annoying
intermittent problem. On transmit only it will at times drop
power to zero. If a "rap" the load, plate or drive knobs it
will spring back to life. Receiving is never a problem. I
had the radio "tuned up" about 2 years ago and except for
this issue it's a fine performer.
Any ideas would be appreciated.

Funny how the mind plays tricks on you. I would have bet that the rig in Contact! was a Yaesu Ft 101. Now I have to watch it again to be sure :)

This ad is a good demonstration of how acquiring code skills has nothing to do with the quality of the operator. I think I can speak for many when I say that Amateur Radio has one major shortcoming. That being that we like our radios very much, but to use them we must talk to some other operator. I find that more and more, it is preferential to just spend time out in the shack, test the radios occasionally for effect and avoid contact with the ham community in general unless there is something that needs to be discussed or an actual emergency arises. (These are becoming more infrequent lately) As much as I do hate to say it, Amateur Radio operators are not very nice people and not particularly pleasant to talk to in person or on a radio. Its kind of a paradox isn't it.... the only way we can use our nice radio is to talk to people who aren't very nice. Justice comes in many forms. sk de ham_guy

Hey Scott,

The VPL-1 is the cable to program the radios you listed. The VPL-1D is
the cable and associated software to program the radios you listed. After
weeks of searching, I finally decided to just bite the bullet and buy the
programming kit. Works great!

I don't know of anyone specifically, but you might call the Amateur Radio Center in Baltimore. Their storefront states that they sell towers, so they probably can help you with finding someone to put up a tower. They're nice folks to deal with, so they'll likely be helpful. See their web page at

http://www.arcbalto.com/

or call them at 410-889-5214.

You know...
It's not very nice to group everybody together and say we're all bad. In fact, I have met some darned nice folks on HF since I passed my 5wpm code last year. I'm sure that once I do the "Interim AG" thing in the near future that I'll run across a few sour grapes, but that's ok.
For example, I had no idea what a ten-ten number is. I politely asked a gent that I made contact with on 10M and he was more than willing to pass the info along. He even gave me his number as a starter.
It's a shame that you feel you can only "test the radios occasionally for effect" because all hams are rude.

Gee Joe,

I was really backing you up, but it would appear that either you have forgotten your grammer or you just do not give a damn about who becomes a HAM.. Well I guess it is both since you already stated you did not care who becomes a HAM, frankly I do and I hope there are plenty of good operators who are not jealous and bitter who are there to teach and elmer rather than rant and rave in 4th grade written english

Look here for some sound card interfaces.

http://www.muenster.de/%7Ewelp/sb.htm

Also do a search for HAMCOMM. The program is for cw and rtty. There is an interface diagram in the program that is referred to by many programs. This interface is a simple IC circuit that plugs into the rs232 port.

To receive sstv you usually tune in to the fellows on usb and when they send a pix you will be tuned in and on frequency. Thinkit is about 14.230 and 14.233 .

If you have a computer either the sound card or the hamcomm interface will let you get started. There are other ways to go, but this is a way to see if you want to go another rout.

You can only sell 1 amp of a certain type per year and be legal. Any
more than that is illegal. Being as the guy mentioned "a lot" of these
amps being sold, doesn't sound too legal to me. To sell one than 1 amp
of a certain type per year, it must be type accepted. MK

G, most of those preamps are a quick way to trash a perfectly good
receiver. Just not needed on HF and just causes all kinds of image/
overload problems etc. MK

John

Recently (last week) a friend of mint told me that Yaesu was closing out the TCXO-2 stabilization crystal for $30 so I called and yes they are, you might want to consider it. Also while I was on the phone I ask about the SSB filter since the AC version comes with the 500 Hz cw filter. Yeasu sells the SSB filter for $72.95. This is the cheapest I have found for "new in the box" unless you find someone what has one. International Radio also sells them. $100 for SSB & $150 for the 250 Hz CW. Good luck to you

FS: Yaesu FT-900CAT, 160 thru 10 meter mobile rig with detachable front panel, radio is in excellent condition, includes factory Collins filter, mike, manual, separation kit which has not been used and the original cartons. Great little radio, but I just bought an FT-847 and don't need both. $825 shipped lower 48. Paul n7ijb@gte.net

Many of the multi-band verticals such as the CC R-5 work great on
6 meters. Can usually get a used one for less than a $100 and you'll
have something that works well on several other bands when 6 is
quiet.

LogEQF is the best windows program for logging and keeping track of awards that I have ever used. It will do it all and only costs 30 or 35.00. I've had my registered program for some time now and just can't remember which version I started with, but I have received 2 or 3 upgrades at no charge to bring me up to ver. 8.85

Has anyone out there had any experience with Icom 735 phase lock loops coming unlocked (mostly two higher freq vco,s) ?

Indication of the unlock is rx will start to garble and shortly later the tx will begin to garble --- but will continue to tx a raspy signal. ssb and cw both.

It has been a chronic problem ---- the ppl coming unlocked -- I have been sucessful in getting it back in lock by tweeking the cap for the freq range that comes unlocked-- there are four vco,s. It will stay operating properly for two to six months when it comes unlocked again. I have tried heat and cooling and tempature does not seem to be a factor. Vibration , mechanical shock in the oscillator area (banging with a screwdriver handle) does not change things.

Has anyone else experienced this ??? How did you solve it ??

Leo --- W8CIJ --- email zkidad@bitstorm.net

>this issue it's a fine performer.

If it's the same circuitry as the TS-520, folks sometimes
have problems with a sticky/dirty change-over relay.

I had that problem with one of my TS-520's.
But, the problem 'went away' before my frustrations
rose to the point where I ripped the covers off...

I have a 96 Tacoma, and pretty much have same problem. If I disconnect the antenna noise
goes away so its not in the power lead. If you still have noise after you disconnect your
antenna, Radio Shack has power line noise device that works fine. I helped friend install
one in his airplane and it worked great. I read that some of the noise comes from
the fuel pump running, but don't know of a way to stop it. If I find out more I will let you know,
if you are successful, please let me know. Thanks 73 Emory

Hi
I have a TS 820 Kenwood HF rig unfortunately I didnt get the book with it with a schematic.To make a long story short I was told by a friend that the radio had a small wheat lamp type bulb that protects the front end to the radio.The radio has recieve but the sens is down about 20 db. I had a Yaesu that had something similar to it bulb wise. Any way if somebody could help me and tell me if this radio has it in itand where in the radio it is ,if their is such a beast I have a manual ordered but will be awhile before I get it. Meanwhile back at the ranch I off the air temporary

Thanks John KM5ES

3759. Battery ?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-22 00:00:00 UTC
From: "Phillip B. Pacier" <ke6guq@arrl.net>
Message-ID: <390204E1.ECC87E20@arrl.net>
Source record: 80982

I have a question about a backup battery for my station. I just received a battery that I can use as a backup to my station primary power. My question is this: can I hook it up directly to my Astron regulated power supply and then hook my radios up to the battery? This way if the power goes off, the service wont be interrupted. Can I do this or do I need to have a charging regulator? I was figuring since the power supply is regulated, I wouldn't need another regulator. Comments? Thanks

73s

Am looking at the Kenwood TS-570D(G) as the rig to purchase to get back into the hobby after a hiatus of many years. Seems like a pretty good buysince it has the built in tuner and standard 232 interface. My last rig was a TS-530S and I was always happy with it.

The rig will be used for both SSB and CW.

Can any owners/users give me their assessment of the rig. Are you happy with it? Would you buy it again? Does anyone think there is a better deal? (assume I "must have" an automatic antenna tuner either "built-in" the radio or as an additional component).

Would appreciate any info anyone would care to share.

Thanks.

Bill

Would anyone that has this software be willing to do a travel package for me? I am taking a trip to FL from TX, have my route planned out, but would also like to have a listing of all the VHF/UHF repeaters along the way.

Does anyone know if a trial version of this software is available?

It's an excellent rig - very compact, yet full function. I've had the full spectrum, 440, 450, 850, and in my estimation, the 570 beats them all for value and operation. ON the other hand, I'm ALSO quite sold on my Icom IC-746 - equal to the 570 in just about every regard, and a few features of it's own unmatched by the 570, plus 6 and 2 meters at a full 100+ watts on ALL the bands it covers - and not that much difference in price...

This very closely follows what I've been able to discover through trial and error. What are the white + signs on the linear scale for, do you know? What is the recommended procedure for tuning to a desired frequency? There's no "zero" on the bandspread dial that I can see. What I've been doing is matching the log value on both dials, ie tuning to where I assume the aproximate frequency would be on the linear scale, adjusting the bandspread until it shows the same log value, then searching again with the linear scale and doing a final zero in with the bandspread. Is there an easier way? BTW, this seems to be a pretty sensitive receiver. In the interest of just trying the rig out, and not having the desire to try to put up a decent antenna in the rain we've been getting, I just connected a 4 foot section of speaker wire to one of the antenna connections. Am receiving quite a bit, even some foreign broadcast stations! Nice little receiver...

3780. need satellite [tiny] tx / rx ideas

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-23 00:00:00 UTC
From: Clark Savage Turner <turner@rome.ICS.UCI.EDU>
Message-ID: <200004230959.aa14519@gremlin-relay.ics.uci.edu>
Source record: 80746
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

Anyone out there know of very small 2 m / 440 / or even 1.2
transmitters and receivers, preferably xtal controlled and
low power (1/2 - 1 watt out) for the tx, no need for high
sensitivity for the rx. We need to transmit simple PL
tones and, of course, ID in morse, basic stuff like that.
Separate rx for control.

We have the Alinco DJ-CxT "credit card" radios for prototyping
and things work for our minimum configuration, but the complexity
of initializing the rigs and resets leads us to simplify at this
point.

Appreciate any pointers at all.

3781. Re: IC 746 VS FT 920?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-23 00:00:00 UTC
From: w1xyz@aol.com
Message-ID: <20000423110517.04711.00001214@ng-cv1.aol.com>
Source record: 80796

The reciever is quite good on my 746. 10M Rx is not quite as good as my 745. 6M and 2M sensitivity are not all that great. The filters supplied are ok but a wide SSB filter (3.3KHz at $200) really makes listening a pleasure and is actually just as selective since the 3.3 has a better shape.

The Motorola MC1496 balanced modulator is used for SSB and AM. This is a very capable component, yet the rig does not make audio that sounds like a Yeasu FT1000 for instance. The ICOM lacks lows and highs in the transmitted audio and there is a sharp cutoff at 4Kc in any audio position. I believe this is due to restrictions in the audio chain.

The auto antenna selector is great and the autotune feature works wonderfully although I do worry about all those relays.

The DSP doesn't do all that much. The noise blanker is only good on strong pulse noise. The AGC only has a fairly slow and a fairly fast action - not enough range. The auto notch filter is neat but not as good as a manual notch filter.

The assembly quality is better than ever for ICOM. Die cast chassis and better sheetmetal with holes that fit. Nice quality PC boards (but crappy on-board connectors that protrude through holes in the back that are easily broken - careful.

The AM performance is not good in the stock form. The Rx passbands are 15, 9, 3.3, 2.8 KC. 15 and 9 are too wide. 3.3 is too narrow. About a 6 Kc filter is needed. ARE YOU LISTENING ICOM?

The AM Tx performance varies with the band. You can get about 65% modulation with clean audio, but spoiled by the ALC action that cuts your carrier - not a nice thing and hard to readjust.

It seems to take a lot of audio from the mic to get this rig to put out. The stock MC6 mic barely does the job. The MFJ boom mic headset won't drive the IC746.

The display is easy to read and a joy to use, The knobs are hard to grip and tiring to use. The tiny knobs are not well placed. The VFO knob is lower than many previous ICOM rigs and somewhat awkward, though it does have a grippy feel, and the variable speed tuning rate works very very well.

Not a bad rig for the price. Unbelievable assembly quality, with omissions in the audio quality department. ICOM needs to recognize the demand for better audio that has been well addressed by Yeasu.

Is it grounded (not just through the house wiring),,,

I've had "noise" and hum problems with a couple Astron PS's which cleared up
as soon as I hooked them up to my external ground bar.

Probably rectifier hash. Try a .05 mfd (hi voltage rating)
capacitor across the secondary of the power transformer.
I've seen this problem with the Drake TR7 PS and even
the Collins KWM380.

!!

Hi,

I am trying to locate a science of cambridge (Later to become sinclair) MK14 computer system.

The computer was avaiable in home built kit for in the UK and from what i am led to believe, most examples were sold to amateur radio enthusiast, as at this time they were the only people experimenting with electonics in the home build environment. (Hence my reason for posting in this NG)

If you have one, or spares, or indeed and sinclair items ie computers, calculators, radios, watches etc, working or otherwise, that you would like to sell, please email me as i cannot regularly get access to newsgroups.

I would also possibly be interested in early home computers from the 1970s and 1980s.

Thank you in advance.

Hi Marty (N5WN)
By meaning operating on the air, I mean just that. CW/SSB/FM, etc. It
does not matter which mode.
The point is that it takes time to go from 5 to 20 WPM. During this time,
you get your station on the air, set up, and make a few blunders. The
multiple guess theory tests are not a barrier to anyone. But, the CW
speed slowed folks down just enough to get some experience.
Typically, MOST (maybe not you, but MOST) operators got on the air long
before they became extra class license holders. Then, by the time they
received access to the extra class sliver of spectrum, they had plenty of time
to learn all the "good" operating habits like copying callsigns, staying
out of the DX window, Saying 73 instead of 73's or seventy thirds, knowing
how to do split on their new radio and call the DX on the proper VFO. Etc.

As for reciprocal operating, I hold or have held licenses in: Japan, Hong
Kong, Indonesia, Taiwan, Philippines, Macao, Slovenia (former Yugsolavia) ,
Espana, Thailand, Hungary, Singapore, Malaysia, and a few others that I can't
recall right now.

None of these are in the CEPT program (maybe Malaysia and Singapore are now but
dont think so)
or the IARP (I believe there are 32 nations in IARP, but maybe got the two
flip flopped). So, that still leaves me 250+ DXCC locations where the 5 WPM
exam is below the HF cut line.

Japan, for example, requires 12 WPM or equivalent -- and this lands you a
50 watt HF license. Yes, the "common" places are moving to the slow code
but let's face it, as a DX'er I dont GO to the common places. It's the rare
places that make this fun.

My point is not to discriminate -- 5 WPM extra ticket is fine for all HF
priveleges...everywhere/every band. But, for those that DO want to do the DX
thing, let's have a 20WPM accredation sponsored by the FCC that can be tacked
on (super-Extra?) for the purpose of reciprocal licensing
and ensure that the FCC license is recognized around the world as being worthy
of allowing guest operators on the air.

I'm surprised I've not read more about this matter in DX club news letters,
ARRL magazine, etc. It's a big deal. Can you imagine? The dream DXpedtion
to P51. You show up only to find out that your 5WPM extra class ticket gets
you a "windows 98 chief logger" seat next to Martti and Jun while they work the
DX? Bummer..

>Bob Crowley
>W1XYZ

Icom listens to the Dxer and contester crowd who want band limited
and compressed audio to give their signals "punch". Hams interested
in high fidelity audio haven't been loud enough in their demands for it.
But if enough hams want it, some manufacturer will supply it.

The first thing to go should be that abomination called ALC, which
destroys the dynamics of the human voice. Of course you'll need
a larger PA with more headroom to accomodate that, ie roughly an
800 watt PA on a 100 watt rig to handle full voice dynamics without
distortion.

The second thing should be to open up the IF and audio stages so
that they are flat across the audible spectrum, ie 16 Hz to 22,000 Hz.
Of course you'll cause and suffer much more interference this way,
but your audio will be high fidelity.

>Comments? Thanks

You don't need another regulator, but you do need an isolation
diode. You can't allow current to back feed from the battery
into the power supply. It can fry the uL723 regulator, not to
mention discharging your battery, if the AC power fails. You
can then raise the voltage on the Astron a bit to make up for
the voltage drop of the diode isolator. That'll keep the battery
fully charged, and your rig won't mind the slightly higher
voltage (they have to be able to work in cars, where the voltage
can be as high as 14.5 VDC).

>On the down side the rubber-duck isn't very efficent on 6 (imagen that!).
>Comet makes a replacement that's supposed to do a better job but haven't
>tried it.

Ditto on all the features in a very small package, and on the toughness of
the radio. I'd also mention terrific battery life thanks to the lithium-ion
battery.

The antenna I use on mine is an ANLI dualbander. It is much better than
the stock antenna on 2m and 70 cm, plus being very flexible. Comet has
a good one too, but it is stiffer and gouges you in the armpit when you
wear the radio on your belt. On the rare occasions I use the radio on 6m,
I hook it to an external antenna.

(Ditto for SW and AM broadcast listening, the duckies don't cut it for that.
FM broadcast comes in well with the ducky, though.)

Like any DC to daylight radio, there are some intermod problems,
but it isn't as bad as some of the other wideband rigs. The CTCSS
decode is a trifle slow, don't use it when scanning.

Source record: 80814

Hello, Robert and the group!

Although the construction is a little weak, Rat Shack has a discone antenna at under $60 that works well. Diamond, Sirio, and Icom also have discones available. The Icom includes 50 feet on decent cable with N-connectors.

I have used all four of these antennas, and there is no practical difference between them.

For six meters, I recommend removing the loading coil/whip assembly and replacing it with either a quarter-wave whip, or a decent 6-meter mobile antenna (I use a hamstick)

Good luck!

Bill WA3RA

I am considering buying a vertical to put in an area that does not lend it self to having radials nor guy support. I do get some interesting winds from time to time.

What is the experience that folks have had with this?

Any other recommendations from the group?

Thanks

Dunc, KL7RH

I purchased a CD-ROM covering all 9 volumes of Police Call, 1999 1st edition from Grove Electronics in Feb. 2000 for $34.95 US.

I cannot get the CD to install properly and have had virtually NO support from "Pozilla Software" who is the writer of this data base.

I have made countless calls from Feb. to present with unreturned calls.

So much for their help line and customer care. It is none existent.

Think twice before you throw your money away on this product.

So far it sits gathering dust, totally useless to me. It does NOT function!

Pozilla Software has a great "I don't care about the customer" attitude.

3822. Re: New Model ICOM 706-Mk III ??

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-23 00:00:00 UTC
From: dlr18sh@aol.com
Message-ID: <20000423191050.19061.00003298@ng-fh1.aol.com>
Source record: 80837

the Icom 706 MK III will not be called a 706 . I was told by a confidential source that they will retire the name 706 with the "g" model that is currently available. The NEW model available no earlier than next fall
2000 will have 1.2 ghz added . The radio will resemble the IC-2800H but with a bigger VFO knob.I also heard the performance will be much better and is designed to compete head to head with the
NEW KENWOOD TM-2000 which will be at DAYTON 2000. This radio looks like a Kenwood TM-700 data radio recntly reviewed in QST. The radio covers from 1.8 mhz to 1.2 ghz. WOW. Kenwood also has
a base/satelite radio called the TS-599
which will also cover from 1.8 mhz to 1.2 ghz continuous and will have a tuner etc in one box.
73's Dayton will be good, TIM

3823. Re: K7JOE your 99% wrong, now please GET OVER IT!!!!!!!!!

NO matter how many of you choose the juvenile tactic of ridicule -
"You MUST be a sad and bitter old man", fact is folks like Joe and me
quite assuredly get as much and MORE satisfaction out of life than the
latest crop or "welfare/slowcode Extras"are likely to... And why
WOULDN'T we? After all , we have the reality that we lived in a time
when amateur radio had status and "class" - ham operators were held in
respect and esteem by those familiar with the demands to be met in
obtaining a license - as well as the knowledge required to place a
station on the air and keep it there. We also (STILL!) have
satisfaction in the knowledge that our licenses were obtained the
"hard way", in front of FCC engineers, and with the full spectrum of
both written and CW requirements that were common and appropriate for
their time period.

Sorry to burst your bubble, or any "satisfaction" YOUR hoped for
imagininary vision of some sad and tragically disgruntled OT may have
given you - but all is pretty calm, serene and generally upbeat on
this end - we just choose to indulge in a bit of open viewpoint on a
twist of FCC policy which we find disgusting... NOW, if OUR publicly
expressed opinions cause YOU seriously tight jaws or increased blood
pressure, well, you know where to take your problem...

--
Gary - KJ6Q
= = = = = = = =
BIGGEST THREAT to U.S. National parks?
Not pollution or environmental issues...
It's UN seizure, as allowed by our "political leaders",
already seen in Yellowstone Park and the Grand Canyon!
....
American government - giving our country away, million
by million, and acre by acre - to many who are sworn enemies.

3824. Re: How do I get started in HAM radio?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-23 00:00:00 UTC
From: Tim Thompson <tthomps@nospam.erols.com>
Message-ID: <8e093f$9lt$1@bob.news.rcn.net>
Source record: 80839

I got started through a local ham club that I found through
the ARRL web site at:

http://www.arrl.org/

The club that I contacted had a beginner's class, and at the
class there were several hams who answered our questions and
gave us advice on how to get a reasonably priced rig that
would meet our needs. The amount of money you need depends
on many things, including the operating modes you want to
use and the availability of used equipment that meets your
needs. Again, local hams may be very helpful - I found a
used transceiver that would meet my needs, but was told that
it was overpriced, so I passed on it.

regards,

Tim

Go to the ARRL.ORG site and look around. That is sort of a national club. On it should be a place to find some info on clubs in your area. YOu might also go to www.qrz.com and see if you can search for some hams in your area. Not sure if they can do that on the internet or not, but you could on an old cd I have from them.

Go to e-bay and look under the ham radio section for some prices of used gear.
Right now Icom has a new radio for $ 995 or so that will cover all the low bands, 50, 144 and 450 mhz. Lot of radio in a small package. It operates on 12 volts so you need to spend about another $ 150 for a power supply.

Search for some of the ham radio supply places for the radios. There are lots on the internet. You can get some good rigs used for about $ 250 and spend about $ 50 for some coax and wire to make a dipole antenna.

From: Wayne Mikel <KE6DJE@arrl.net>
Message-ID: <3903c263.0@news.sac.bfp.net>
Source record: 80843

Hi all,

I have Kenwood TS830S radio and it receives but I get no transmit from it.. it won't load up, won't tune... nothing.. I have High Voltage of 900 volts according to the meter. It was working on 10 mtrs one night, then the next morning I went to use it and then is when I could not transmit. I have another 10 mtr rig and can't hear anything from the TS830S. I replaced the 12BY7A tube and the 2 6146s and still have nothing. all switches are at the same settings as the night before.

Any help would be greatly appreciated.

email ke6dje@arrl.net or post back to the NG

Thanks again
Wayne Mikel KE6DJE/AG

Well Said, Gary. Blood pressure not up here. Just doing fine! Isn't it funny how "big" these ham operators are hiding behind their false names? One of them was even smart enough to post my name on here (as if we all dont know how to use QRZ.com) I wonder if that guy in kentucky will be on the newsgroup tomorrow between running down to cash the welfare check and working all the DX with his new 5 WPM license!
I sense the rest of the pack is cranky today because they dont get my 5% "real ham license" discount. Oh well. I'll even work the lids if it counts as a new one! Most of these guys didnt even listen to the healthy debate and discussion -- like typical operators, they're full of hot air. Been trolling with this topic for a while now. I think I'll head for rec.harley.davidson for a while and enjoy one of the other hobbies.
73 (note to you newbies, it's not 73's ....73 is singlular...real hams know it too).

Source record: 80856

The easy way to get into SSTV is to download a program called W95SSTV and use a computer with your radio output connected to the line input of your sound blaster audio card. W95SSTV is available anywhere on the web as shareware. It is easy to set up and use.

Good Luck

> "More hams"? Possibly - but how many that will make the radio activity
> something we will be proud of in another 10-20 years...

Unfortunately, I haven't run across anything produced with a code test in the past 10-20 years to make me especially proud of overall radio activity. The majority of what I heard on 80m and 20m I couldn't let my daughter listen to, and would have preferred not to allow my wife to hear, for fear she would ban radio from the house!

We do have our moments ... I lived in Fort Lauderdale during Hurricane Andrew. Didn't hear a bunch of CW traffic then, though. Skywarn here in Western Tennessee is certainly laudable, but that's mostly populated by no-code Techs now. The poor kid from the Netherlands who was shot by pirates certainly made me proud, but then again that wasn't CW traffic.

I can't seem to find the cause/effect of CW examinations that produces better operators. I wish I could. I will say, however, that I find CW operations to be absent of much of the profanity, bigotry, interference, etc. found in the SSB segments. Which is why I spend most of my time personally on CW.

I assume you are speaking of "operating on the air" meaning CW. I suppose I'm the exception that proves the rule. I didn't make any CW contacts prior to passing my 20wpm test. Didn't make any until over a year after, when a friend introduced me to the fun of QRP contesting.

Not a big deal, I guess. But taking code tests made me more reluctant to actually use CW on the air. I had to be talked into it.

> > STILL require 12 WPM, some as much as 22 WPM for HF access

While the sentiment is logical, the laws in this instance don't support the argument being made. Both CEPT and IARP (good for Europe and South America) accept Tech Plus licenses the exact same as Extra Class. Some of the more exotic locations (like the Balkans, where I'll be in June) still require reciprocal licenses, but offer no resistance since I've met the 5wpm standard. Can you name five or six countries that (in your estimation) will prohibit reciprocal operations? I just don't have the time to go through the database and check. Is there a table of reciprocal priveleges somewhere that I can look at requirements en masse?

You may be correct -- but nothing thus far has proven your point. I suspect it may take a couple of years for the fallout to hit on this point, and it may not hit at all (in my opinion).

I still think our best route is to file a petition asking the FCC to raise the extra class code requirement back to 20. I understand this has been done. I would also suggest that perhaps we give up the Extra class only subbands. The only difference in Extra and other licenses would be the ability to be Volunteer Examiners. After all, if I am giving an entry level code test, I should know the code at least four times better than the people taking it!

This keeps a "highest level" license, but does away with operating privelege discrimination based on CW ability.

Oh well, just some thoughts.

ObFS: Kenwood TS-940sAT, inrad CW filters (both IFs), IF-10B computer interface and W1GEE interface cable, excellent condition, original manual. Asking US$1,100 plus shipping. Contact direct at my callsign at midsouth.rr.com or my callsign at arrl.net if interested.

I have a Yaesu FT-900CAT HF tranceiver in excellent condition. This features a removable faceplate, 20' separation cable and separation kit, Collins SSB mechanical filter, optional 500Hz CW Filter, Automatic antenna tuner, handmike, unused power cord, manual, original box and packing. This is a great radio for home or mobile use. $800

Type acceptance only applies to 50 MHz and up amps, transceivers,
scanners. Type acceptance also applies to commercial (like marine or
aircraft radio) equipment.

Love mine. Hard to believe they can get all the features into something that small. The metal case helps to. I had mine in the back pocket of my bike jersey when I hit a dog & crashed. Except for some road-rash on the rubber-duck the rig survived just fine.
On the down side the rubber-duck isn't very efficent on 6 (imagen that!). Comet makes a replacement that's supposed to do a better job but haven't tried it.

Mark.....find out if it has the internal tuner.....the 440S(without tuner) should be around $500 and with tuner around $600 .... ask if it has any optional filters - you should have one if you are interested in cw....the 440 is generally a good radio but had some problems with conductive grease that was used on the connectors of the pll's .... any serial # prior to one starting with '0' is suspect.....ask if the modification has been done.....if it is an earlier one.....if not ... you can be sure it will have to be done at some time.....about $140 per PLL....there are two....ask about the cosmetics....any scratches or wear marks and are you getting the original box, mike and manual......

there is a book by the ARRL.....called the Radio Buyers Guide Book.....may be helpful.....about $15 ....

hope that helps....

The REAL problem is the rubber cement used to stabilize the components to
prevent
FM ing while mobile. It gathered water from the air and became corrosive,
eating away copper. I have replaced coils, FETs, and capacitors done in by the
stuff.
It has NOTHING to do with connectors and it is NOT grease.

Source record: 80892

I have a Astron RS53A power supply that I use with my Kenwood TS-570D(G). I am experiencing a ton of noise generated by the PS on portions of the 75/80 meter band particularly around 3.600 to 3.700 Mhz. I have traced the noise back to the PS by using another receiver not using the PS and when tuned to these frequencies, turning off the rig hooked to the PS the noise disappears. Any others with this problem ? Just like to know before I spring for another PS. Thanks.

>Is there an FAQ? How much money gets a guy started?

Maybe $300-$600 for a decent used transceiver that works the high frequency bands, 160 through 10 meters. Maybe $800-$1200 for a new rig. Add another $150 for a power supply for the transceiver. Maybe $50-$70 for an external speaker. Plus another $200 or so for odds and ends -- antenna wire, antenna lead-in cable, grounding rod, soldering iron, solder, a basic voltmeter, etcetera.

If you can find it, the April edition of CQ magazine has a nice article on all of the high frequency transceivers that are currently available in various price categories.

You can also go to the web sites for Icom, Kenwood, Yaesu and Alinco to see their current rig offerings.

From: George Sereikas <SEREIKAS@worldnet.att.net>
Message-ID: <VP0N4.32922$WF.1509865@bgtnsc04-news.ops.worldnet.att.net>
Source record: 80705

I have for sale a like new Yaesu FT-920 HF/6 Meter Tranceiver. I am the original owner and the radio works and looks great - it is about 5 months old and was used as a back-up radio and for 6 meters and has seen only about 5 hours use. It would be hard to tell it from a new radio. It comes with the FM-1 FM unit and includes the the hand mike, manual, 12 Volt power cord(never opened/used) and the original triple box.

I will ship this radio in the US 48 for $1099. If your interested, act quickly. If not sold this week, I will be listing the radio on eBay. If interested, send me email at: sereikas@worldnet.att.net

You can find links to several SSTV sites at.

http://www.muenster.de/~welp/sb.htm

I go the one I use at
http://users.cyberzone.net/jamie/

As for interface directions, they have been published lots of places, and
you can buy a commercial
one. I think the psk 31 help file has schematics in it. Probably the SSTV
ones too.

Source record: 80713

You may want to read the various posts in the amateur newsgroups before you commit time and money. The amateur community has just undergone a "civil" war among its ranks and is about equally divided on the issue of restructuring the morse code and licensing requirements. April 15 was the effective date of this FCC restructuring and you will be considered a "scab" by a lot of present operators, since you would be entering after that date. (Read the "JOE" threads to get the idea.) Your welcome into the ham community will be mixed, at best, but if you have a tough skin to the derogatory remarks and comments, fine. Radio itself is quite fascinating, but it takes two to communicate and a good portion of those people out there already despise you. Be aware of this situation before you spend a lot of money. Best regards, ham_guy

3897. Antenna tuner troubleshooting:

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-24 00:00:00 UTC
From: "E. Hoover" <OLDhooverSNAG@uk2.net>
Message-ID: <390500DC.CECF8B6C@uk2.net>
Source record: 80720
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur

I just acquired a "brand new" vectronics 300DLP tuner off of ebay. When i unpacked it and hooked it up, I discovered that the meter on it does not work. I had another fellow ham check it out, and our consensus was that the tuning part still works and tunes, but for some reason the meter will not show any readings, and we have ruled out that the meter circuitry itself is faulty because both needles on the meter aren't working. So maybe it has to do with the connections to the meter or some other circuitry? Does anybody have any ideas on what could be wrong with it, or how to go about troubleshooting it or reparing it?

Thanks,

Erik

A fellow ham has a Kenwood TS940S which receives from 14mhz to 20.9mhz. All other receive frequencies display ok but are dead. Tx seems to be ok.

Any ideas? Could this be a problem with the PLLs? Most PLL problems I have read or experienced loose the display to dots only. This unit does not loose its display.

Please respond via email to
pmedic@eznet.net

I'll have to agree it's not a top end radio by any means. A Yaesu 990 is incredibly superior to
the 570, they are not even in the same galaxy. BUT...for casual use, it will suit your purposes.
Look at a good used 990 tho, and you will see a world of difference for the same money.

The usual start these days is a 2 meter HT, maybe $150 or so.
Radio Shack sells a fairly decent 2M handheld, mobile, and a 10 meter
rig at or around that price.

An effective "middle ground" rig for those seeking better SSB voice "fidelity" is the Kachina 505DSP. The latest version offers transmit audio bandpass of 100 - 4000 Hz with adjustable equalization over that range. The receiver affords 3500 Hz SSB bandpass and 6000 Hz AM bandpass.

Because the SSB signal is generated using DSP phasing rather than the more conventional filtering approach, Kachina feels that less distortion is produced.

I can only report from on-air experience that an SSB contact seldom fails to elicit a voluntary comment about the "exceptionally clean audio." I put a bit of frosting on the cake with the Heil Gold Line studio-grade dynamic mic and the W2IHY equalizer.

My experience has shown that clean, well-balanced audio that is properly emphasized for clarity can compete with the pinched, "contest" audio that is so common on the bands.

I will also add that Motorolla is coming out with a base HF radio that will
compete with the Icom 756 PRO and the FT-1000 MP.
This radio will be at Dayton 2000.
Also heard rumers about a Yaesu FT-100 Mark II coming out in fall of 2000.
This radio is a update of the Ft-100.

3918. Alinco DJ-580 help needed

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-24 00:00:00 UTC
From: robert4@nojunk.flash.net
Message-ID: <MPG.136d7f8db5dd30ff98968f@news.flash.net>
Source record: 80764
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

Last week I purchased this radio and was told that it worked great.
Oops. It doesn't. It barely transmits on 70 cm and I cannot get it to
receive on 70 cm at all. Repeaters that my Yeasu can hit with ease on
low power, the Alinco can barely hit on high and is full of static. Both
radios output 5 watts on high power.

Tone is off, squelch is set properly, offset is correct, but no dice.
The radio works fine on 2 m.

I read the manual a little more thoroughly and saw that if you connect a
mono mini-plug into the stereo output on top of the transceiver, that it
will short out the 440 band. Big warning on this in the manual. Well,
low and behold, he says he used it for packet. I figure he must have
mistakenly plugged his cable into the stereo one by mistake and shorted
out the 440 portion of the radio.

So it comes down to this...Have any of you done this to this radio and if
so, was it an expensive fix? I have never had to have a radio repaired
so I don't know approximate costs on something of this sort.

Any help would be greatly appreciated..

thanks
robert

Don't get carried away on your first radio.
See if you can get a used VHF/UHF radio for just over a hundred dollars. I have seen VHF radios sell for as low as $85.
After a few months getting familiar with the radio, you will have a rough idea what you are looking for in a radio.

I would take classes to start with if you can. It's the easiest way to learn, along with some hands on, all which will give you ideas on what kind of radio you want. The people you meet in class, students and instructors, are the people you will be talking to on the radio. I can't think of a better way to learn, meet people and/or get yourself a good used radio.

You might say to yourself, I can't afford the school... but can you afford buying a new radio that have no idea how to use?
If you do want to buy new, my suggestion is the Yaesu FT-8100 dualband radio and the Yaesu VX-5R handheld.

If you have a scanner, program in all the VHF and the UHF repeaters frequencies in your area and just plain listen.

I just got my Basic here in Canada last Sunday, and wished I went to classes. I think I would have learned things a lot faster in class then to try and find the info on the net. Ohhhh... and LEARN Ohm's Law!!

Just My Opinion

I got my SSTV receiver going yesterday.

I am using...
the hamcomm interface
486 computer w/ color VGA
FT757GX hf radio
JVfax software

The problem...
ALL of the pictures I am getting are in grey-scale.
Please help me if you know why this is.

My thoughts are that the interface i built will not allow enough of the signal to pass through.??? But hey! This is my second day w/ SSTV.

Thanks in advance.

And WHY do you immediately assume VHF/UHF is the place for this fella
to start out? Why not HF, and some of the "bargains" out there for
THOSE bands? Without even knowing where the guy lives, it's pretty
risky prescribing VHF/UHF - what if he lives out in the boonies?

Something like a good Kenwood TS-520 or Yaesu FT-101E will give good
reception and performance no matter WHERE he lives...

Hello,
I have been tidying / clearing the shack and have the following forsale

Standard C500 + 2 Nicad cell (require deep cycle charging) +
Mobile holder + 6 AA Nicads and case (no box but with workshop
manual - No mods to radio) £50 + P&P

VUR30 dual band linear power amplifier by Microset for 144 & 432 Mhz
1-5w input 30w output with 16bd gain RX preamp. Ideal for use with
dual band hand set in mobile set up (one coaxial lead when used
with dual band aerial) or FT290 / FT790 £80 + P&P

Both C500 + VUR30 Amp £120 + P&P

Kantronics D4-10 UHF Data radio 2 channel (432.550 & 432.625 Mhz)
10W Tx power 19K2, 9k6 and 1k2 baud ready (plug in and play) with
manual and leads for KPC9612 £250 o.v.n.o. + P&P

Kantronics KPC9612 2 port 9k6 / 1k2 TNC (Ver 5 firmware). Sorry no
printed manual - disk with gif images supplied. £150 o.n.o. + P&P

Both D4-10 UHF Data radio and Kantronics KPC9612 sold
together £370 o.v.n.o. + P&P

TEKK KS900 UHF Data radio 2W tx power single Xtal channel
(432.625 Mhz) 9k6 1k2 baud ready (plug in and play) with manual
and leads for TNC2H £120 o.n.o. + P&P

TNC2H - DK9SJ 9k6 baud TNC (on board G3RUH modem not an add on)
by Symek with manuals *can be modified for 19K2 baud* £120 o.n.o. + P&P

Both TEKK KS900 and TNC2H sold together £200 + P&P

Wood & Douglas PK144D 2 metre Data radio 9k6 /1k2 baud ready.
**synthesised 4 channels can be modified to use 2 x BCD thumb wheel
switches to give 80 25Khz channels on 2M. ** With manual and W&D
mod sheets. £50 + P&P

Pac Comm PC320 2 port TNC (TNC220 on a PC ISA card) has HF
(300 baud) and VHF (1k2 baud) modems plugs in to standard 8bit ISA
PC slot (card is 3/4 length will fit into most cases) with manual and
lead to connect to C500 £50 ono + P&P

Serial card gives 2 high speed RS232 ports (uses 16550 UART chip,
can be configured for com 1 to 4 on IRQ 2,3,4,5,10,11,12 or 13 by jumper

settings) made by Lava Computers in Canada. £5 + P&P

D-Link DE-200 Ethernet card (no manual but disk with drivers) £5 + P&P

2 off backer cards PC backup on to Video tape driver disk some info offers

Pye A200 60W linear modified for 2m use (not been used for some time
and requires attention - drops out when drive power applied) £15 + P&P

MET 5El 70cm Yagi and 10M + of UR67 / RG8 coaxial cable £10 + P&P

Pye Aerial filter 132 - 174 Mhz Type AT29988/AB £5 + P&P

Pye Aerial filter 68 - 88 Mhz Type AT29988/E £5 + P&P

Pye W15FM Westminster on 4M - channels 70.26, 70.45, (? 70.325) with
carry pack (needs new Nicads) & Charger. £18 + P&P

Telecomms Folded dipole antenna for 68 - 88 Mhz in new condition £8

Pye Westminster 5Amp PSU £8 + P&P

Pye W15FM Westminster on 4M - channels 70.26, 70.45, (? 70.325)
[selling for M0AFF] £15 + P&P

Commercial end fed Half wave vertical for 4M [selling for M0AFF] £10 + P&P

HT transformer 3760 - 0 - 3760 @ 380ma primary tapped for 110 220 234 240
(heavy 74Lbs so you are going to have to collect this one !!!) £40
Or I will swap for 0 - 1600 (800 - 0 - 800) @ 1Amp HT

If you are interested e-mail me I am located in Manchester
&73 Martin.

I can't help you out with a book but i do have some pages you might want to look
at.
http://www.berkshire.net/~robbins/technote/doppler.html
this one was real easy to make and was of good value if you use it with a radio
with a signal meter.
---
http://members.aol.com/homingin/DSEfix.html
Not really of much value unless you have a locator to start with.
---

cheers Mike vk4vzk brisbane

Also for those interested, we are going to start an "on-line" ham class. It's kind of a new concept and it should be fun.... and you can't beat the price... (free) <G>.

Go to http://www.gmra.org/ecomm and join the on-line conference.

We do a lot of public service and skywarn work also....so if those topics are of interest to you... you may find the site even more interesting.

Cheers,
Al (WA4HND)

It was not unusual to find a given transistor type to be subclassified by its Beta- they used to vary quite a bit. This classification was commonly done by painting a color on the transistor- so you might find a 2Nxxxx red, yellow, blue.

Just hope its not a disaster like the FT100, if they were smart they would bring out a updated version of the FT1000D. If they tightened the receiver, put in band pass filters and design to proper RF standards for the transmitter and receiver and leave everything they way it is on the FT1000D, they would have loyal customers for the next 10 years. Lets hope they dont plan to copy the IC756 PRO.

By the way look for a new Kenwood rig at Dayton, and a new Rig from Signal One.

It does not matter what we as HAMS want or think. What controls the direction is the radio manufactures. Icom, Yaesu, Kenwood know that they will sell more if people are not burdened with learning the code.

You will see code removed from the requirments within 5 years, if not you will see fewer and fewer new radios designs. When was the last time that YOU bought a 3000.00 rig?

Myself, I think that code has its place. You can cut through a lot of interferance that voice will not. Allthough with the invent of the Internet, a person can do the same with a lot less headache.

HF is a pain. You have to know what bands, how to tune an antenna, how to tune a amp. If you dont have anyone to show you it can be a expencive hobbie.

When was the last time YOU took a novice or tech into your home to show him how to talk HF? 5 or 10 people a year is a drop in the bucket.

Do you even have a place in your town that you can go in and BUY a HF rig? Yet how many computer stores do you see?

Why do you think that WalMart is not selling HF rigs?

just my 2 cents, dont flame cause I just dont care anymore.

Lee

I tend to agree. Some here suggest he start out on 2 meter repeaters. They're fine for what they are, but they're also not much more exciting than talking locally on a cell phone.

Bill, the high frequency ham bands, 160 meters through 10 meters, offer more of a "radio" experience, one where you communicate radio station to radio station using simple wire antennas. You can work the world using voice or morse code, or any number of digital computer-type modes.

Your best bet would be to go to the web site, http://www.arrl.org and order from them some introductory books on ham radio. They're the American Radio Relay League, and can help you get started. They have license manuals you can study to get your ham license.

You might also do a search on the web under your city's name to see if there are any local clubs devoted to ham radio.

Another thing you can do is go to http://www.qrz.com/ Click your mouse on the word "database." Then do a key word search for the name of your city. This will bring up a listing of many of the hams in your city, any of whom you might contact.

Good luck!

Bob

I'm surprised. I've never heard any of this on repeaters where, after all, most "AGs" came from but maybe it's some regional phenominon that HF makes international. OTOH, I heard mucho QRM b4 4/15/00 but had to believe the source simply hadn't heard the QSO - a reasonable assumption given the vagarities of propagation and the fact that lids didn't exist until the middle of this month, right? Moreover, I remember when "appliance hams" were the boogy-men. Much of what we think of as "sin" is, like burping after a meal, "cultural" and there really isn't much difference between our 73s or Q codes and "10-4" when it comes to passing information. Having been "brought up" in commercial (ship-shore, etc) radio I tend to see "pileups", people fighting for a contact, about as obscene as it gets but that just reflects my prejudices carried over from another service, not the good or evil of contesting. There is no doubt that any influx into a "culture" will change it. In a few years we'll all be happily saying "10-4 hi hi" .. or should it be LOL or....??
73s ..... good buddies ;o)

I would like to hear comments pro and con regarding the Cutting Edge Enterprise Worldpack for Icom 706 and the FT-90 transporter. Do you have the take the rigs out to use them (heat/air circulation?) how much extra room for a tuner? Accessories? Solar panel room? Comfort? Convenience?

Dunno - in groups I travel in, on both low and high HF, I usually hear
as well or BETTER than MANY of the "high-end" transceivers in the
$2000+ price class used by my friends. Another significant plus for
me, is that the 570 is an EXCELLENT mobile/RV rig due to its smaller
physical size and convenience of operating due to front panel layout
and access to most frequently needed controls. A pretty versatile rig,
and excellent all-around performer!

To each his/her own...

Well, when I got my novice license, I went on the air, on 40 meters,
with a $20 cw transmitter and a $59 shortwave receiver. I certainly
figured out pretty darned quick how to use the hf frequencies. The
idea that one can only start on 2 meter repeaters or whatever is
absurd.

Nowadays, one can start on hf with qrp kits that cost less than $200.

Not knocking vhf repeaters, in particular, but the idea that that's
the only place to start doesn't make a whole lot of sense.

Hi to all, This not a spam measage. I just returned from my local Satilite tv deal where I bought a new 10" dish for KU band TV. While I was there she gave me two GI Primestar dishes with receiver, LNB, mounts and all. I am an Engineer but don't know much ablut this out dated equipment. She said she has about 30+ of these systems that was removed from locations when Dish Network bought out Primestar, some are round 3' and some are the wide beam dishes. My question is are these good for anything, or should she just junk every thing?

Joe K7JOE <K7JOE@yahoo.com> spewed forth:
No, I did not. I was not born then. I was born in 1969 -- and at
age 30, I think it is pathetic that you old timers are so damn lazy.

Oh, so I (at 28) am a lazy old-timer? I passed the Novice a year before no-code, and I held nothing against those that got their no-code tech's. I worked pretty damn hard to get 13, and was happy at Advanced. The only reason I wanted to upgrade to Extra was to be able to grade exams at VE sessions. I tried for 5 years to upgrade to 20 WPM, and failed at least a dozen times.

The attitude of some people is downright amazing. Just because someone "operates" on HF for a while does not make them "proficient" or "well-versed." I have seen better operating practices from day old hams than I have someone that's been on the air for 20 years. Just take a look at the mess on 14.313, to give one example. I've been jammed off the air on several occasions, just because someone didn't like the way I was doing something. What it was is beyond me.

20WPM does not make a good or courteous operator. Commen sense and respect for others does.

Matthew

What kind of video card? You need a 2 meg video card (NO trident!) for color. The program reverts to B & W if you do not have enough video ram. Try JVComm in DOS - it may work better. You may have to graduate to SVGA.

I compared that rig's receive sensitivity with an ICOM-R2 rig last week.
Instead of using a calibrated signal source, my friend and I stood on a roof top and compared
reception band by band using a whip antenna.
We found a huge intermod on the Yaesu, NY television channel #13's sound carrier was blasting in
the aircraft band from about 20 miles away. (Dial reading + 2X I.F. Frequency).
And I'm not sure why the AM detector played the FM sound carrier so well.
Although this is not an amateur band, be aware that you may have intermod problems with such a broad band
front end.

Iam a technician and of course I only can transmit between 6m and 0.23cm . Well, I have a navy friend who is stationed in Norfolk, Va. . I live in the southwest part of Va. and Norfolk is approx. 350 miles away. Is there any way possible I could make the QSO ? What if I used 100w or 200w or more on 6m (I don't know). Any suggestions. Thanks, Sam alphacentauri@i-plus.net

Yep, like clif says check the switches, but I had that happen on mine one time that was very strange. All of a sudden it wouldn't load, and the plate current would peg, etc. Totally out of whack...It was like I had a totally out of tune tank circuit. I checked the relays, etc, and ok. Then started checking into the tank circuit, and never could find any signs of bad parts. But still like a short in the tank. So I started pulling the caps out etc, and checking, and replaced with new just to try. Also checked all the chokes, and looked fine. Still wouldn't work. So then I got down to the last parts to check, the big variable cap, and the feedthru cap for the neg feedback. A pain to get to to unsolder I might add... I pulled the cap lose enough to be able to check the feedthru cap , looked ok, and I stuck it back in there, and looked at the cap, switches, etc,etc. Couldn't find anything that looked wrong. So I resoldered the cap back in, and cranked it back up, expecting it not to work as usual. Viola! It finally worked. But danged if I know for sure what the problem was. I don't know if maybe a bad solder connection on the feedthru cap, or maybe the variable. But it looked just fine when I took them apart. But whatever I did, it finally worked again, and has since then. Tne only other thing I've had to do since then is resolder the driver tube pin connections to the circuit board. They get loose, and start heating up and you have a world of trouble. "Thanks to Clif for the trap door hint btw"
Made it much easier. I still wonder what exactly acted up on mine. Guess I'll never know for sure. I never had to change any parts to fix it. So guess maybe a bad joint... MK

I'd clean all the band switches to start. Also could be the relay acting up. Get some real good switch cleaner. I'm not sure what is the best. Others may have comments on that. Tuner cleaner will work, but there are better cleaners to use for that from what I hear. MK

> aircraft radio) equipment.

If thats the case, why did the guy I know who makes solid state amps
need type acceptance to sell them?
The fcc busted him at dayton for it. Actually, it was Riley in person I
think...Also why would the new radios that come out have to wait for
type acceptance to be sold as is commonly the case? You need type
acceptance
for any large scale manufactoring and sales of ham gear I'm pretty sure.
Only the small fry hams that make a single amp a year get around this.

I've a drop on my 706MK2 and the turning dial stop functioning. I opened it and find that the photo-coupler unit was broken. It is a unit looking like a volume control (variable resistor). As the local dealer is out of business, I need to order a replacement part and does not know its part number.

Does anyone have a service manual on hand and help me find such part number?

Thanks a lot!

Greetings from Hong Kong

Dominic

Matthew.... Maybe if you were on 14.030 instead of 14.313 MHz. all these years you would have passed the 20 WPM "barrier". CW is a skill you learn by doing. Besides this, in modern ages, you could have passed the CW test with a multiple guess test instead of 1 minute solid copy in front of an FCC engineer like I and thousands accomplished. You could have done it if you were dedicated to the task (absent some physical disability). Sorry, but to those of us who put in the effort, even if you pass the "lite-extra", you will never be one of us. Dick W5AK .

Hey Matthew,

When the cranky, old men(Extra-heavies if you will) die off we'll be glad we're not one of them.

Ham operators are just like pilots. The pilots with less than 300 hours tend to be more cautious and follow the rulebook whereas more "experienced" pilots tend to be laid back and not as careful. We've seen it a hundred times. It's an everyday occurrence with hams whether it be on HF or the local 2M repeater. Things like business, not identifying and the occasional profanity are all there and they're mostly the "experienced" amateurs at fault. Richard and the rest of the grumpy, old farts CANNOT deny it. Their condescending attitudes will only alienate them.

Here is a Cushcraft 14 element two meter "Boomer" beam set up for FM. It is several years old but is in great shape (looks like it was only up one month!). Nothing bent or missing, and feedpoint was always well-protected from the weather. Has some extra parts from a second identical antenna. Manual included. Down and boxed and ready to ship. $75 + shipping. Picture available on request.

I have for sale my Icom R1 scanner/receiver

frequency range is 0.1 to 1300 MHz

Covers medium wave, short wave, VHF, UHF

Modes: AM, FMn, FMw

100 memory channels which store frequency and mode

tuning steps: .5, 5, 8, 9, 10, 12.5, 15, 20, 25, 30, 50 kHz

Triple superhet on AM and FMn
Double superhet on FMw

Excellent condition, works perfectly

Includes original box, original manual and pocket guide, BP-90 battery pack for AA nicads or alkalines (I have also used NiMH batteries in it, but charged them in a separate charger), wrist strap, belt clip, wideband rubber ducky antenna, and slip case which fits the radio with the BP-90 case on it.

$175.00 plus shipping via USPS priority mail, insured.

We are building very small, simple satellites and need some tiny transmitters and (separate for control) receivers that are preferably crystal controlled to simplifiy initialization and increase reliability. We have used the little Alinco credit card transceivers for prototyping and they are fine, but we have had a jump in the schedule that launches us earlier than we anticipated, so we would like to simplify (till our next mission.)

Any suggestions? We would want to transmit a half watt or so out and the receiver need not be too sensitive. Probably one on 2 meters and one on 440, though I suspect it might be better to go to 1.2 Ghz for the control link.

Any pointers at all much appreciated.

Just good advice here from an old fart. When in doubt, listen, listen, listen. Jokes aside, I already have heard 'temporary AG' a few too many times, and with them came talking on top of existing qso's, calling cq in the middle of a dx pileup, saying 'what's happenin' thar good buddy', saying 'huh, huh??' when told 'listen up', say 'where the hell is Bulgaria', and my personal favorite, 'Big 10-4 there Vladamir.' Please listen and take advise when it is offered.

One ear hears differently than another I guess. I have been running 2 990's and the 570 side by
side for three years. Usually all I do is flip the radios on and go back and forth between the
two and no one yet has picked the 570. The bandpass is very poor on the 570. Listen to a weak CW
signal with a strong adjacent signal. In the 570, the weak sig is obliterated. on the 990, you
hear both. Look at the arrl spec reports on both radios. The 570 underperforms the 990
significantly. Now, if you must have DSP, then you do not want the 990. But if you are looking
for an amazingly quiet noise floor, probably only rivaled by the Omni, then pick the 990. It
hears far better than the 570. Do NOT take my word for it. Put them side by side and spend a few
hours with them on the same antenna. Remember, a good bandpass and a quiet noise floor hears the
DX when the sunspot numbers are down.

Give me a good reciever that DOENS'T need audio DSP anytime.

The three best antennas I've used mobile for 10m are the Sirio HP-3000, Les Wallen Modulator and a quarter-wave whip. The first two have much better bandwidth than your typical 10m (or 11m) mobile antenna. Good luck finding either in North America. Sirio will sell direct via mail order though. Gain, who the hell knows as I've never tested them. I do know from experience they work better than the Larsen and Maxrad -professional- series antennas and also better than the 48" fiberglass poles. I've also had good luck with the Wilson and K40 brands - but not quite as good as my first two choices.

As for alternator whine. I would wire the radio directly to the battery and ensure that the battery posts are as clean as clean can be. This will get rid of the bulk of it. I suspect the RS filter is a choke and a capacitor. This can easily be duplicated with an old power transformer and an electrolytic capacitor. Make sure it is capable of handling the current though and that there is not too much resistive losses. Some capacitors are better than others. Speaking in generalities, lower value electrolytics will also have a lower ESR (equivalent series resistance). The lower the ESR, the lower the noise. If you employ 3 x 330uF you will almost certainly be in better shape than if you used 1 x 1,000uF. Put the capacitor(s) after the series choke and not before, that is to say betwixt the radio and the choke. I'm not sure if the HTX has a floating chassis. If so, it would be prudent to ground this to the negative power lead otherwise the chassis, and the coax shield, will be -floating- and sucking in noise with great zeal.

What kind of freqs. can someone new to the radio use in the US?
Here in Canada we are allowed 50MHz on up for basic qualification.

This person is using a high speed internet connection which would
suggest he does not live in the BOONIES.
The radios you suggested are a considerable amount of money more then
getting a cheap VHF/UHF radio just to get him on the air.
The reason I suggested VHF/UHF is because of two reasons... cheap to
start and the best way to get information if he decides not to go to
school. I just bought a VHF handheld for $70CAN, could you tell me
how to do that with HF? And how do you buy a HF radio if you have no
idea what you are buying?

What I have suggested to this person is the best way to get started.
This is what I did and it has worked very well for others in this
area.

$70CAN and a test isn't a big investment nor due you have to learn
antennas, tuning and all the other necessities that go along with
operating HF. You just press the button and talk, usually there is
someone on the other side with lots of information. Now I may get a
lot of flak with the "press the button and talk" idea, but... it
works. Hams around here love to share information, not sure what it's
like around there.

Would you want someone that has no idea how to use a radio in HF?

I am looking for the following (PLEASE reply DIRECT and not via
the NGs! Tnx)

Midland Syntech II Deluxe control head (70-0002 model)
Midland lowband XTR on 30-36 Mhz (22 or 99 channels)
Midland 16 button DTMF mics for Syntech II or XTR

up to 2 GE MASTR II UHF repeater stations on 450-470MHz any power range
(this is for radio station I work for..must be able to bill via invoice
before payment)

Again, please contact direct...not via the NGs...

thanks

For the same reason that they do not sell 8" reflector telecopes,
mandolins, rice-paper kites, or any CDs with the "F" word on them: they
only sell what the consumer-mass wants. If at least 50 million Amaricans
don't want one, you won't find it at Wal-Mart.

>

My Kenwood service bulletins don't have Serial # refs.
My radio is more than 10 years old too,
so is KC1SP's, N1JWRs, W1CSMs, and all have failed this way.
I also have fixed TS-440s for CAP, and other hams failed in this manner.
There was a run using the synthetic rubber (Which like RTV creates acetic acid.)
And they used the stuff all kinds of places, NOT just the PLLs.
I believe I may have the longest running TS-440SAT, as I NEVER turn it off!
(Solar powered!) And many others failed way before mine, so it's possible keeping it

hot keeps the water out and the corrosion retarded. AND before Dr. Covington
(Who is really a great guy!) beats me up too much,
I know heat is a great energizer of acids too. :)

I haven't been in the newsgroups lately but has
anyone heard that RT Systems is going out of
business tomorrow (April 27th)?? They are in
Ala. and Florida and make the ADMS-1E software
for the Yaesu VX-5R, VX-1 and VX-500.

I called them yesterday to do some price checking.
The salesman said that they would be only open until
Thursday which I thought they were closing for Dayton.

No, he said, AES had bought them out last Wednesday
(April 17th). God, I wish I had know! Must of have been
some real bargains.

As it was I had to go to R&L Electronics. They had not
heard about this either.

**********PROYECTO CD-Rom RadioSoft/2000
****
**********LA MEJOR SELECCION DE SOFTWARE DE RADIO AFICIONADO**********

Que es el Proyecto CD-Rom RadioSoft/2000 ??

Selección de los mejores programas de Radio Aficionado para todas las
modalidades de Radio
Se trata de la edición anual de un CD-Rom donde esten representados
todos los programas
de Radio desarrollados por Radioaficionados Españoles,además el CD-Rom
RadioSoft/2000
Pretente ser un escaparate donde todo Radioaficionado que realice
proyectos pueda
darlo a conocer de forma gratuita como por ejemplo,software de
radio,kits de radio
circuitos,modems,antenas,receptores de satélite etc..
Otra idea para este CD-Rom RadioSoft/2000 es que todos los
radiaficionados puedan
Exponer sus trabajos como si de una Exposición se tratase pueden
incluir en este CD-Rom
RadioSoft/2000 como por ejemplo exponer imagenes recibidas a travès de
satèlites meteorológicos
listados de frecuencias utilitarias,imágenes de sstv,wefax etc...

Que contiene el CD-Rom RadioSoft/2000 ??

Programas para recibir Mapas Wefax i Satelites Polares
Nooa,Meteosat,Okean etc.. recibelos
en tu ordenador con tu tarjeta de sonido,disfruta de la meteorologia en
tu pc.
Programas de seguimiento de Satèlites los mejores para Windows95/98 o
MS-Dos
Programas de Log para que lleves al dia tus contactos DX o captaciones.
Pogramas para ver las ùltimas estaciones DX conectadas en tiempo Real a
travès de Internet
Controla tus equipos de radio y receptores por odenador con los mejores
progamas de CAT.
Se trata de un CD-Rom con programas muy seleccionados y con las ùltimas
versiones Cientos
de programas de Radio ordenados por
categorias,PACKET,SATELITES,LOG,SSTV,CAT etc...
El CD-Rom RadioSoft/2000 dispone además de mucha informaciòn
complementaria como
Frecuencias,Balizas Direcciones de Internet por materias inprescincible

para escuchas y DXistas.
Dispone de una carpeta denominda Soft EA con Programas de Radio
desarrollados por Radioaficionados
Españoles en idioma castellano,en esta 2ª edición del CD-Rom han
colaborado muchos colegas EA

Como Puedo Adquirir el CD-Rom RadioSoft/2000 ??

Si estais interesados en recibir el CD-Rom RadioSoft/2000 podeis llamar
Movil:(649)302362 tambien por via E-mail a tarentola@yahoo.com
indicando vuestra direcciòn
El precio por de cada CD-Rom es de 3.500 + gastos de envio
Contrareembolso

Como Puedo Colaborar en el Proyecto CD-Rom RadioSoft/2000 ??

Muy simple,puedes enviar cualquier información sobre
software,fotografias de Wefax,Sstv
Proyectos,Kits de Radio o cualquier otro proyecto que quieras dar a conocer.
La inclusión de cualquier información es TOTALMENTE GRATUITA !!
Puedes enviar la información a la siguiente dirección:

Proyecto CD-Rom RadioSoft/2000
Apartado de Correos 31
CP-08758 Cervello
Barcelona
Spain

NOTA:
ESTE CD-ROM NO CONTIENE PROGRAMAS PIRATA,EN TODOS LOS CASOS SE INDICA
SU SITUACION LEGAL,INDICANDO SI SON SHARESWARE,FREEWARE O DEMO,ADEMAS
EN EL APARTADO DE SOFTWARE EA,SE DISPONE DE PERMISO DEL AUTOR PARA
INCLUIRLO EN EL CD-ROM RADIOSOFT/2000

Saludos

Ramòn EA3CFC y Antonio EA3AHW (Coordinadores del Proyecto CD-Rom
RadioSoft/2000)

Richard Beerman <rbeersr@ev1.net> spewed forth:
Matthew.... Maybe if you were on 14.030 instead of 14.313 MHz. all these years
you would have passed the 20 WPM "barrier". CW is a skill you learn by doing.

Well, the only HF rig I have access to is a club, and I don't get many
chances to go up there. I don't operate anywhere neear 14.313, I was just
using it as an example of the terrible operating practices of "old timer"
extras, et al.

Besides this, in modern ages, you could have passed the CW test with a multiple
guess test instead of 1 minute solid copy in front of an FCC engineer like I
and thousands accomplished. You could have done it if you were dedicated to the
task (absent some physical disability). Sorry, but to those of us who put in
the effort, even if you pass the "lite-extra", you will never be one of us.
Dick W5AK .

Well, like I said, I had very little incentive to upgrade. I mostly wanted
it to administer exams. I don't _like_ cw. I prefer voice or pactor.

As for passing the test in from of an FCC engineer, perhaps you'd like to
go back to horse and buggy, too? All us soft, lazy-ass people will never be
real "men" the way the pioneers were. Bah!

As for lite-extra, you'll never know the difference after 8 October 2001.
That being the day my license expires. After that, the latest entry in the FCC
database will be "Renewal" of my Extra on or about that date. There'll be
no way to tell if I got my Extra in 1991 or 2000. So, in 10 years after all
the new Extras have had at least one renewal, you won't be able to tell a
60 year Extra from an 11 year Extra. Once that first renewal goes in, the
playing field is level, at least from a database query viewpoint. The only
way you'll be able to tell is if I choose to tell you I got my Extra in
2000. I've been a ham for "only" 10 years, but I think my operating skills
are a damn sight better than many old-timers. I may have never travelled to
a FCC field office and bore the iron gaze of a field engineer, but that
doesn't make me any better or any worse than anyone that did.

Times change, get used to it.

Matthew

4032. Re: How do I get started in HAM radio?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-26 00:00:00 UTC
From: EDMONTON <EDMONTON@hotmail.com>
Message-ID: <mzvN4.89839$W5.1016450@news1.rdc1.ab.home.com>
Source record: 80605

Why do you assume that everyone can afford to spend $250 on a brand
new hobby?
Why do you assume that this person has an interest in building a kit.
I don't know of many pilots that build there plane before they fly
it.

It is quite obvious that you were much more driven to the hobby then
this person, not to cut him down, but I am sure you knew the answers
to his question before YOU started.

I was just stating one way to start, but... I guess I am wrong!
This is the way I started, and have learned a lot on 2M, enough to
form an opinion on what areas to operate and the type of equipment to
use.
I'm not sure why you seem to think this is such a bad way to start
out.
All you have done is complained about my posts and haven't given any
real info to this person. Oh sorry, you told him build one.

Look, I'm not trying to get into a pissing match here, but... It's
just one way of getting started. I don't see why you can not leave it
be and post your own opinion.

Sorry, but out of everything you have posted, nothing has been
contributed to this conversation.
Did you mention what freqs. you can operate and with what kind of
license?
What kind of license do you need to operate HF? CW?
Maybe some of this kind of info would be of more help to this
individual instead of bashing me in the way many guys get started
around here.
Try forming you own answer before you knock somebody else.

Lets hope they put a decent receiver into this radio. If they do this, it will place Yaesu at the top of the pile for Dxing and Contesting radios for quite a while. Some manufacturers seem to be deluded by thinking amateurs want features and gimmicks. At the moment every top line radio is plagued by receiver problems on the low bands, lets hope they listen.

4038. Want: SERVICE Manual for Kenwood TR-7400A

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-26 00:00:00 UTC
From: John Burch <occupant@enetis.net>
Message-ID: <3906d533@news.enetis.net>
Source record: 80611
Cross-posted to: alt.ham-radio.marketplace,rec.radio.amateur.equipment,rec.radio.swap

Wanted: The *SERVICE* manual for the Kenwood TR-7400A
two meter mobile/base rig. Really good copies will be considered,
although an original SERVICE manual is preferred.

Thanks for your time de John
occupant (at) enetis (dot) net
..

4039. Re: New Model ICOM 706-Mk III ??

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-26 00:00:00 UTC
From: dlr18sh@aol.com
Message-ID: <20000426080632.22243.00003940@ng-ci1.aol.com>
Source record: 80612

I was told the Icom 706 MK II G is lowering the price along with the FT-100 due to Kenwood coming out with the TM-2000
HF -1.2 GHZ mobile radio. The radio looks like a TM-700 mobile radio. I was also told Icom will retire the 706 name and style after this current model. The next model with have 1.2 ghz plus look like a IC-2800..basically a large front multicolored display.
I don't have any dates on the release though.

The used Primestar dishes can be used for Ku band reception if you
have a standard satalitte receiver that has Ku capabilities. There are
a lot of wild feeds on Ku transponders. I have an old C-band dish
that I use for this. I have been thinking of adding a Ku dish and
plugging it in to my receiver just for this purpose.

Later,
Joe

W6KDN i suspect was never on six meters. You can only work that
distance with groundwave. A good antenna up at least 50 feet on
both ends and using SSB there is a good possibility that you can
work the distance on six meters. Best time to try is in the
evenings.

Best bet is to upgrade to general and use 40 or 80 meters. With the
new requirements it is a 'piece of cake' to get on HF.

Eddy, this may come as a shock to you, but new hams do build kits. New hams do get on CW, as well as a lot of other modes. It's been happening for decades, now.

>
>Sorry, but out of everything you have posted, nothing has been

>Maybe some of this kind of info would be of more help to this
>individual instead of bashing me in the way many guys get started
>around here.
>Try forming you own answer before you knock somebody else.

Eddy -- We have pointed the original poster in the direction of the ARRL web site where he can get plenty of information on the latest band plans and licensing structures, as well as order BOOKS that help potential hams get started in the hobby. It does little good to list frequencies and transmitting modes to a guy who doesn't know the first thing about the hobby.

The original poster has also mentioned that he has arrived at a point in his life where he has disposable income to spend of this hobby. I assume that means he has at least a few hundred bucks in his bank account, possibly more, and that has guided our answers in regard to equipment.

The ARRL web site, by the way... http://www.arrl.com/

... is no longer being hacked, and is available for access. Right on the front page are topics such as "Learn About Amateur Radio" and "Amateur Licensing Restructuring, Answers and Questions."

Everybody have a happy...

It would be rough. Two meters may be a better band to try because the antennas are a little smaller (?).
But you would have to run 500 watts output and have the antenna at 80 feet. Stacked antennas would be better actually. Of course the terrain between you and the other station would come into consideration. In other words, it would be rough.

4050. 80m dipole on 160---a really bad idea (long)

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-26 00:00:00 UTC
From: n7ws@arrl.net
Message-ID: <39070080.161515882@news.azstarnet.com>
Source record: 80623

The subject of a 80 meter dipole being used on 160 meters got me thinking. I suggested in the previous thread that the Q of the system be given some consideration. No one seemed to pick up on that so here goes.

Assumptions:

1) 130 feet of 12 AWG wire, center-fed with 600 ohm open-wire line.

2) Height above "good" ground = 50 feet.

3) Transmission line length "optimized" for a 50 ohm match using a shunt capacitor at the match point.

Method:

1) Use Eznec "high-accuracy good" ground. Perform a frequency sweep from 1.85 to 1.95 MHz in 10 KHz steps. Read R -jX at each frequency and transfer data to ARRL Radio Designer (ARD).

2) In ARD use measured data as a frequency sensitive load for a 600 ohm transmission line model. The line parameters include an Er = 1.01 and a loss coefficient of 0.0008 dB/m (.025 dB/100 ft). The line loss is calculated using the standard equations from "Reference Data for Radio Engineers" for two 12 AWG wires spaced 6 in.

3) In the ARD model, the line length and the value of the shunt capacitor (Q=500) at the match point are both "optimizable" values. The optimization goal is an input return loss of -50 dB or better (VSWR= 1.01) at 1.90 MHz.

The measured data fro Eznec are:

Freq (MHz) R jX

1.85 8.087 -1095
1.86 8.183 -1086
1.87 8.313 -1077
1.88 8.421 -1067
1.89 8.553 -1058
1.90 8.664 -1049
1.91 8.776 -1040
1.92 8.913 -1031
1.93 9.028 -1022
1.94 9.169 -1013
1.95 9.286 -1005

After running the optimizer, the line length is 26.8088 meters and the shunt capacitor is 5977 pF.

Here are the results:

Freq. Loss dB SWR

1.850 -9.3012 63.57:1
1.860 -7.6226 41.82:1
1.870 -5.7209 24.57:1
1.880 -3.7690 11.69:1
1.890 -2.4335 4.21:1
1.900 -2.7029 1.01:1
1.910 -4.3770 4.11:1
1.920 -6.4366 11.28:1
1.930 -8.3712 22.80:1
1.940 -10.074 38.47:1
1.950 -11.561 57.16:1

So at the match frequency we have a 1.01 SWR as expected. The line loss is 2.7 dB (from a line with a matched loss of 0.021 dB).

But look what happens if we QSY up or down just 10 KHz. Wow, greater than a 4:1 SWR. Even the autotuners in most new rigs won't handle this. So if you are going to use this system, you are going to have to adjust the line length and capacitor just to move 10 KHz.

If you think you'll just use a fixed line and vary the capacitor, I have news for you. Changing frequency to 1.91 MHz and fixing the line length at 26.8088 meters and just adjusting the capacitor to 4312 pF, here are the results:

Freq. Loss dB SWR

1.850 -8.9792 47.12:1
1.860 -7.7356 32.99:1
1.870 -6.3757 21.39:1
1.880 -4.9535 12.18:1
1.890 -3.6387 6.09:1
1.900 -2.7884 2.61:1
1.910 -2.8038 1.92:1
1.920 -3.6975 4.32:1
1.930 -5.0775 9.12:1
1.940 -6.5779 16.30:1
1.950 -8.0207 25.35:1

Acceptable perhaps, but don't try to move 20 KHz.

Cecil will say, "What about my method of varying the line length?" Okay, we fix the capacitor at 5977pF and allow the line length to vary. Moving to 1.91 MHz we get:

Freq. Loss dB SWR

1.850 -11.5856 89.54:1
1.860 -10.2557 63.47:1
1.870 -8.7223 41.63:1
1.880 -6.9566 23.83:1
1.890 -4.9968 11.61:1

1.900 -3.1515 4.18:1
1.910 -2.3093 1.03:1
1.920 -3.1990 4.14:1
1.930 -5.1168 11.33:1
1.940 -7.1623 22.85:1
1.950 -9.0163 37.78:1

That works you say, but let's look at what the new line length is: 26.574 meters. That's only 0.235 meters (0.77 ft or 9.25") different. Are you really going to have an approximately 85 ft long line that is adjustable in 9" steps. I doubt it. And if you do, what is the sensitivity to changes in surroundings?

IMHO are really bad idea.

73,

Wes N7WS

HF is a pain? I thought that learning about radio was part (a big part) of what ham radio is about. What fun would it be if it didn't require some learning and effort?

Sure, the internet is fast and easy. It has its place. But it's no replacement for ham radio, with its challenges and pleasures.

I'm not trying to flame. Ham radio isn't for everyone. If it ever becomes that simple and easy, I'll no longer be active in it.

You can't clear an individual memory from the front panel of the radio.
You can remove it from normal selection, but you can't get it to go back
to the "unused" status it originally had (little "u" showing up when
you select it).

Two ways that you can make it unused again:

- reset the radio completely, clearing all memories

- use the ADMS-1 software (or any other programming software - there
are alternatives) to program the radio. This reloads all memories,
including marking unused ones "unused".

I have the ADMS-1 software, and I never program more than 1 or 2
frequencies by hand from the front panel. Beyond that, I always use
the software. This also lets me have several different "personalities"
for the radio - one that loads the memories with amateur repeaters,
another that adds the channels for a local sports event our club
provides communications for, another for scanning aircraft frequencies,
another for marine frequencies, and so on.

Dave

4057. comments on Yaesu FT-90

I was browsing at the local radio store the other day and spotted the Yaesu FT-90. My first thought was how easy it would be to mount in the very limited space in my car.

Does anyone have any experience using this radio? Good, bad, indifferent? I'm seriously considering buying one, but would appreciate any comments you may have, particularly in regard to intermod resistance and overall receiver performance.

Thanks in advance.

73,
Jeff, KC1MK

I have the following items for sale:

Henry 2K Classic Console amp
80-10 Meters with spare pair
of 3-500Zs. $1250 P/U only

Autek WM1 Power/SWR meter $100

MFJ 259B SWR Analyzer w/case $150

Mirage 2M Power Amp
B3016 30w in/160 w out $150
Above with Astron RS-35 $200 P/U only

Alinco DR570 Dual Band Xcvr $200
45 watts 2M/35 watts 440 MHz

Packet setup
Alinco DR-1200 Xcvr (dial lites out)
MFJ TNC
Astron 12 Amp Supply $150

Heil ProSet $75

Yaesu FT-1000MP $2000
With 2 ea INRAD mechanical 500
HZ Filters, INRAD IF Mod, SP-8
matching speaker. Prefer P/U Only

Actually, I'm currently 3 states short of WAS on six. I have a 4 element
homebrew quad at 75', and can run up to 1100 or so watts on six. I can
easily talk 150-200 miles ground wave with less than 20 watts, but have yet
to do a 300+ mile groundwave QSO even with the amp. I suppose it could
happpen some day, but I wouldn't want to count on it on a regular basis...

However, given the differences in locations, your milage may (and probably
does) vary....

Hi,
OK, you are in the MR mode. Dial up the channel to be erased, press F
one second, followed by MR. This should clear the memory. You are
right, it is not in the manual

Could I get a question answered from any Yaesu (or other) owners?
In the 1000D or MP, Can you use the sub-receiver when transmitting?
I don't know how really separate the receiver is, but was wondering if it would be possible to listen for yourself on 15 while talking on 10 (or vice versa??) if using one of the Russian satellites.
Can any transceivers do this??
Regards....Dave

Is a TenTec Century 21 still a good radio for everyday use, or
is it a rig better left for the collectors?

I have seen several for sale and they seem like they would be
good but not sure how good they really are. Would it be better
to find an older digital Kenwood for a few dollars more
for working qrp and qro? Cost is a factor, mostly looking for
multiband qrp, but may want to run more power on occassion.

If you have any experience with these, what do you think,
worth buying or not?

> MK
> --
> http://web.wt.net/~nm5k

The reason Type Acceptance is needed (for a transceiver, transmitter,
or receiver) is if the rig has scanning capanbilities that cover OVER 30
MHz. Most of the new rigs that have come out include at least 6 meters,
hence the wait for TA. You would need TA if you're planning on selling
more than 1 VHF and up amp a year. Not needed for below 30 MHz. Ever see
the words 'Type Accepted' in an HF amp ad? I don't think so.

Try 2m ssb and a decent 13 element antenna and 150 watts or
so. I can pretty regularly hear some of the beacons at 350
to 400 miles which typically are horizontal omni's or very
small beams (I run a pair of 17 element antennas side by
side on a fiberglass crossboom at 35 feet and 160 watts).

I don't believe I said that was the only way to start.
I said it was the easiest way to learn and the cheapest way to get
going.
$200 can be a lot of money to some people... especially for a kit.

CW? He asked how to get started, and you suggest CW?

So, you want him to build a kit and do CW?
Hmmmm... that's a good start, maybe down the road when he knows what
the heck he is building and what he is trying to accomplish.
I can't believe that you actually think this is a good way to start
Ham radio! Maybe he should be blind folded if he doesn't choose
school.

You didn't answer my question, what freqs. can a basic, or is it
novice as you call it, operate.
Then what do you suggest for him?

| >
|
| >
| >Would you want someone that has no idea how to use a radio in HF?
|

| Well, when I got my novice license, I went on the air, on 40
meters,
| with a $20 cw transmitter and a $59 shortwave receiver. I certainly
| figured out pretty darned quick how to use the hf frequencies. The
| idea that one can only start on 2 meter repeaters or whatever is
| absurd.
|
| Nowadays, one can start on hf with qrp kits that cost less than
$200.
|
| Not knocking vhf repeaters, in particular, but the idea that that's
| the only place to start doesn't make a whole lot of sense.
|
| Bob

Over in the boatanchors section is a Hallicrafters SR-150 80-10 transceiver w/ac supply for $250... These sort of bargains are quite common, and there's still lots of life in those sets. As for the "difficulty" in a beginner with kits, *BS!* - I built several radio kits well before I was licensed, certainly doesn't take an Einstein or rocket scientist to follow directions.... I also noticed your total ignoring of Bob's reference to the inexpensive stuff HE started with, ON HF!

I have yet to see any callsign attached to your posts are YOU licensed? What class? Could it be you are pushing VHF/HF because it's all YOU like or are allowed to operate on? Will you mention your callsign, or will we now just see lots of sputtering bluster? Sure your callsign and level of priveleges is relevant - it MAY tell us WHY you seemingly are pushing VHF/UHF...

There IS a pretty large world, and MANY facets of operation below VHF - in fact, MOST that aren't even AVAILABLE above HF! WHY should a newcomer to ham radio be expected to base his view of the pastime on the LIMITED venue provided by VHF/UHF repeaters, and with some cheap handheld at that?

DXing
Contesting
Long range digital modes
Yeah - that nasty CW...

There's LOTS more - but NOT on VHF/UHF!

Given a decent antenna and a band opening, 5 watts will give you 5-9 copy.
Without a band opening, 1 KW won't help...

I was ok with your posting up until the last sentence, and that really hit me as a sad commentary on the state of our hobby - is there really a need for anotehr level of exclusion and elitism? Contrary to my earlier view that recognition of achievement is a positive thing for ham radio, I now believe that it's too bad that there is a "rank" involved in this at all.

> Proud NRA member

Well I do think so. And I offer the following questions from the Extra
exam question pool as proof that type acceptance IS required for any
commercial amp that operates under 144 Mhz.

E1G01 @A1C01 (D) [97.315a]
How many external RF amplifiers of a particular design capable of
operation below 144 MHz may an unlicensed, non-amateur build or modify
in one calendar year without obtaining a grant of Certification?

D. None

E1G03 @A1C03 (A) [97.315b5]
Under what condition may an equipment dealer sell an external RF power
amplifier capable of operation below 144 MHz if it has not been
granted FCC certification?

A. If it was purchased in used condition from an amateur operator and
is sold to another amateur operator for use at that operator's station

E1G06 @A1C06 (C) [97.317b]
Which of the following is one of the standards that must be met by an
external RF power amplifier if it is to qualify for a grant of
Certification?

C. It must not be capable of operation on any frequency between 24
MHz and 35 MHz

E1G11 @A1C11 (B) [97.317b2]
Which of the following would disqualify an external RF power amplifier
from being granted Certification?

B. The amplifier produces 3 dB of gain for input signals between 26
MHz and 28 MHz

4082. RF in my computer speakers

Does anyone reccommend a brand of Stereo speakers for the PC, that wouldn't be affected by me transmitting on HF with my amplifier? Basically, every time I transmit with the radio, I have to run around and turn off all the PC speakers.

Ideally, I'd like to find something, less than $100 that has a nice shielded cables, and sounds good and has an attractive case.

I am trying to repair an AEA Isoloop antenna.

The broken part is the plastic coupling from the stepper motor to the variable capacitor rotor.

Has anyone had any experience in repairing these units or adapting a makeshift solution.

I would be interested in any ideas as the broken part is no longer available.

Colin

>Could I get a question answered from any Yaesu (or other) owners?
>In the 1000D or MP, Can you use the sub-receiver when transmitting?

NO,
receivers are muted. On FT1000D it might be possible to modify the circuits, it is capable of crossband RX/TX, but when you transmit, RX2 is muted as it is "factory" produced. MP can dual receive only on the same band. The best bet is to use separate RX/TX like Drake line, with two antennas and appropriate bandpass filters.
Or just get another RX.

Yuri, K3BU

Sam, have you checked the local clubs to see what repeaters are
available and what range they have? In many areas, repeaters are linked
to cover great distances. Perhaps such a repeater system exists in your
area. If so, you could talk to your friend using nothing more than a
couple of inexpensive FM handhelds.

And what Jim describes _IS_ in the manual, on page 31 (Memory Masking).

By the way, you, and everyone else, is right, there is no way to erase
a single memory (the radio has to be reset, erasing all the memories, or
reprogrammed with the software).

Here's a hint:

The Icom is third generation. The Yaesu design is brand new!

Which would you bet is a more refined, shaken-out design?

4105. Re: IC 746 VS FT 920?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-27 00:00:00 UTC
From: Aristotle Zoulas <zoulas@inch.com>
Message-ID: <de2igs07b54rgluomt3h7efaab0buds7g5@4ax.com>
Source record: 80572

I am also compairing both units. I took a look on eham,net and the 746 got a rating of 4.8/5 vs. 4.0/5 for the 920. My feeling is that most people would choose the 746. Not because its icom but because of the overall quality and performance. I will be getting one of these in the next month. I think I too will go for the 746. Any other postings to this gentleman's question would be appreciated.

Go to Palstar's web site and you can see quality parts in a very handsome package. I understand Palstar was the former Ameritron manufacturer and Ameritron is superior to MFJ's tuners. My next big tuner will be either a Nye-Viking, Palstar or Ten-Tec.

I called them today. I have a problem with a floppy disk for their
DJ-V5T programmer and had sent the disk back to them for a replacement
on Monday this week. They are still going to be in the software
business and plan to enhance it some (whatever that means). AES just
put them out of the radio business. Today is the last day they will
be selling radio equipment. They have some decent sale prices so give
them a call!

4115. Re: What is a Century 21 ?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-27 00:00:00 UTC
From: "John." <jh-lewis@swbell.net>
Message-ID: <Je0O4.527$wB6.18003@news.swbell.net>
Source record: 80582

Personally, I would avoid a Century 21 or 22. I tried out both while trying to find a nice inexpensive rig for my nephew and was very disappointed - resold them both within days of buying them. As you probably know, they are CW only rigs (they receive SSB but no transmit), and with the BROAD receiver in those particular radios it's a nightmare to try and have a QSO in crowded band conditions - maybe an external DSP would've helped, but I couldn't see spending the extra money.

In my case, I wound up getting him an extremely nice TS-520 and he's quite pleased. I paid about $300 for the Kenwood - more than a Century 21 or 22, but well worth it. IMHO spend a few hundred and get something else - there's tons of older gear out there that'll give you a lot more features for your dollar. Avoid the Century 21 and 22.

Best of luck - I know buying your first rig is a daunting task... I can only give you my opinion, but if you have any questions about a rig feel free to ask -- over the years, it seems like I've had most of them :))

Source record: 80583

Having owned a Century 21 (way back in 1978), it is a reasonbly decent CW only tansceiver - double direct conversion, but probably not the best for a beginner.

If interested, I have an Ten-Tec Omni D Series A in mint condition that I would be willing to sell for $350.00. It is a CW (full QSK) and SSB 100 watt output rig and quite high-performance. . . many still in use today.

If interested, let me know.

73,
Don Allen W9CW

<<SNIFF>> Sad, them going out of business. I bought my first radio from them. Of course, this was just last year, but still... They had good support, and the people knew their equipment.

I tried to call their Fla store to order a radio they had in stock. Unfortunately, it took me so long to talk the YL into it that I missed the shipping window. Arrrgh. Guess I'll just have to wait until the Hamfest in Birmingham next weekend (May 6/7).

It's odd that AES would buy them out, then promptly close the stores. Normally, when you buy out someone you are looking to expand your business into new locations. It's almost as if AES just wanted to get rid of the competition and get some inventory, rather than expand. Has AES made any formal announcements on the subject?

I may be wrong here, but I was of the impression that type acceptance
was necessary for amps that can work in the vicinity of 10m. Is this in
error?

I have a pristine Kenwood TS-950SDX up for auction on Ebay.
You can find it at:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=319624896

You won't find a cleaner or better working one.

4135. KENWOOD 950SDX FREQUENCY ADJUSTMENT

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-28 00:00:00 UTC
From: rong@computer.net
Message-ID: <3908f565.378812@news.computer.net>
Source record: 80459

I have a late model (1999) Kenwood 950SDX, and it is slightly
off frequency---about 50Hz. To zero beat WWV at 10 Mhz, the digital
readout reads 10,000.05 . I have an older 950SDX up for auction on
Ebay, and that one is right on---EXACTLY.

I would like to bring the newer one "right on". On the rear
panel, there is a hole, and a trimmer in the hole. It is TC-1, the
reference oscillator (TCXO) frequency adjustment trimmer. Is this what
I adjust to bring the digital readout back on 10,000.00 ???

I had an 830S before these 2 950's, and the adjustment trimmer
for that one was called the "standard oscillator trimmer", not the
reference oscillator trimmer.

Has anyone out there had any experience with this
adjustment ??? All answers are welcome.

Read the QST and CQDL magazine reviews. In particular look at the dynamic range, third order intercept point, second order intercept point, transmitter phase noise etc etc. It is only looking at these numbers can you decide what is the best unit, everything else is heresay and subjective babble.

Yep, I was told by the guy in the Alabama store that AES simply wanted
to eliminate them as competition. I live in the St. Pete/Clearwater
area and I now have to drive all the way to Orlando to go to a store,
and that's AES. I think not. From what I hear AES used to have a
store here, then closed it down. Now they've shut down RT. I don't
think they'll get much business from this area anymore. Everyone I've
talked to about it says they'l just buy online from someone other than
AES.

Sam,
The cheap and easy way: Go to your local electrical contractor and purchase a 10' piece of 1 1/4" metal conduit and have them put a 90 degree bend in it. Have them bend it however far back you would like, I would suggest 2-3 feet from the end. You then clamp this to your tower and you have a stand-off mount. I've been doing this for years, and as long as you make sure it's not a 1/4 wavelength or other resonant distance from the tower/mast you're in business. I generally drill holes through the conduit for the clamps to bolt through so the conduit can't pivot. I've even put a bend on both ends of the conduit and clamped it in the center to a telescoping mast, giving me a mount on either side of the mast. My current setup has withstood Okla. winds (upwards of 70 mph) for 6+ years with no problems.

It is the single SO-239 that all report. I am sure it could be replaced with a BNC pigtail for the fellow that wants one. For the fellow that reports that it is a "N" type connector, I wonder who installed that? since they come from the factory with the SO-239. The beauty of this radio is that if you want separate lines for the VHF and UHF, you simply go inside and remove a connecting pin between the two boards, install another pigtail for the UHF side and then you can put an amp, tuner or whatever you want in just the 2 or 440 line and then to a diplexer and then to your dual band antenna. Can't do this with other dual banders so you have to use two diplexers there which adds more loss to line.

since

I've seen many times the 8100 of a friend of mine (and even opened
it)... It has the N female on a pigtail. It came with that connector
from factory afaik.

Hello there...

I am not from US and so I don't know your laws... What I don't understaind is, why can't they sell low cost amplifiers just for 10m. I am most of time on 10m and some times 100W from the rig is just not enough. Amplifiers from ICOM, YEASU, KENWOOD or others cost a lot of money and if you don't need or have licence for 1kW is stupid to throw away money for "LEGAL" amplifiers. Well, that's just my opinion...

**** YES! This software is now updated to reflect the April 15th
**** changes in FCC licencing structure for Amateur Radio. The software
**** contains questions for the new and old ham tests as well as
**** the unchanged professional tests.

Greetings!

dauntless-soft.com is pleased to offer high quality MS-Windows test
preparation software for the FCC/HAM plus some Professional tests
available for shareware download at http://www.dauntless-soft.com.
(aka http://www.hamexam.com -- easy to remember address--tell your
mates!) The program will drill you for the following elements:

ELEMENT
2 (NEW) Technician
3 (NEW) General
4 (NEW) Extra
2 (pre April 14, 2000) Novice
3A (pre April 14, 2000) Technician
3B (pre April 14, 2000) General
4A (pre April 14, 2000) Advanced
4B (pre April 14, 2000) Extra
1 GROL Basic Radio Law
3 GROL General Radiotelephone
7 Radar Endorsement - Ship Radar Techniques
8 GMDSS Radio Operating Practices
9 GMDSS Radio Maintenance

You are welcome to download this and give it a try. Secure online
registration is available--a $30 registration unlocks ALL the questions
and entitles you to FREE LIFETIME UNLIMITED UPGRADES of the
software. That's less than $3/test.

This software is based around the same engine that drives our FAA test
prep software that has helped many pilots score very highly on those
exams. (Yes, we got a new hobby and decided it was time to write
software for it, too!)

Thanks for your time. We look forward to your visit!

Source record: 80475

Hi Alex,

Just think about your question for a moment... 10M and 11M are
so close, that it's not a question of designing for 10M and NOT
for 11M. It's a question of designing for a range and then designing
a specific coverage (11M) OUT of a product. Since there really
isn't a practical way of making a narrow band product for JUST
10M, that means that anything that is 'put in' to make it NOT work
on 11M could be 'taken out'.

Mike

Cross-posted to:
rec.radio.amateur.boatanchors,rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.amateur.swap

I've got 1/2 of a Drake C-line, and need an R4-C and MS-4 to finish it up. The details:

R4-C: Must be 5-position mode switch. I don't care if it has Sherwood or other mods, but must not be butchered. Filters and crystals a plus, but not required. Most important is that it be cosmetically very good, and with a minimum of corrosion on the chassis. Also must be complete, no missing parts please.

MS-4: Condition not that important, except must not be dented. Also, must have normal Drake MS-4 label in the front, and speaker must be ok. I don't need a power supply.

Please respond with price and condition to NeilR@innermedia.com, or you can call me at (603) 465-2788, or (yes toll-free) 800-962-2949

Thanks, and best 73's all.

Neil, N1DMA

FWIW mine came with the SO-239 connector but the
instruction book says that the Euro model uses
the "N Type" connector.

The reason is twofold, technical and political. First, any KW amp is going to be expensive; limiting it to 10m wouldn't lower the cost much. Second, our CB band is so close in frequency to 10 meters that it isn't feasible to make an amplifier that doesn't cover, or couldn't be easily modified to cover both bands and many CB operators do just that (use amp's illegally). Politically, FCC's lacks funding and governments tend to punish the innocent vs catch and punish the guilty. It is hard to catch illegal CBrs and when they do the punishment is usually limited to confiscating the illegal gear - hardly enough to deter anyone. Deluged with complaints from neighbors who's radio and TV sets were bring jammed and unable to afford enough agents to catch a fraction of illegal stations, FCC caved in to pressure to "do something" and (with few exceptions) banned mfgr of these amplifiers. I might add that most "10 Meter" amps sold were designed to boost "QRP" (4-watt CB) signals into the 50-250 watt range, not to amplify 100w to 1kw - and for good reason. As you know, a 10 (or 11) meter signal depends on tropospheric reflection (skip) and if the band is open between two sites, 100 watts is more than enough; more is overkill.

4157. Auction: TCS-14 Transmitter NOS MINT Beautiful !

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-28 00:00:00 UTC
From: jbr101@my-deja.com
Message-ID: <8ec9icgf1@nnrp1.deja.com>
Source record: 80481
Cross-posted to: alt.ham-radio.marketplace,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.swap

I have a new-old-stock TCS-14 transmitter for auction on eBay. Take a look at the pictures -- this rig is beautiful !

The URL is

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=314106127

and the blurb is

This is an unused and unmodified new-old-stock mint-condition example of the venerable TCS-14 AM/CW transmitter. Found as-new in-the-box, never put into military service, with no holes gouged out for coax connectors, no manky power cables grafted into the case, no mouse nests in the wiring, or any other defect usually found with these rigs. Covers 1.5-12 mHz, AM or CW, and with the appropriate power supply (not included), I believe it puts out around 35 watts AM, 50 watts CW. The inside gleams like the day it was produced, the panel and chassis have no corrosion or discoloration. Includes cabinet and shock mount feet as shown. Some of the packing material is stuck on the large front handle, but that will be easy to remove. I may clean that and repost a picture so I can see this fine old rig in all it's glory before it goes out the door. Unless you have a time machine, you're never going to find a cleaner example of a TCS transmitter -- don't pass it up !

Closes 4/30/00

Thank you.

I have purchased and used four SGC auto tuners in the past and have always received most excellent service when returning things for repair. SCG has always fixed things, even if it seemed out of warranty, with no questions asked. I recently sent them an SGC-230 tuner for repair which needed 2 disc caps replaced and I was told the repair will cost $240. Thats as much as a used tuner goes for! I also learned that many SGC products that had warranties up to 5 years have now been limited to 1 year and only 90 days on the SC-2020 and their new small tuner. What does this say about SGC's faith in their quality? I think I will be looking elsewhere for these products in the future. Are you listening Pierre?

4160. FS: Yaesu VX-5 (long)

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-28 00:00:00 UTC
From: garen@scully.tamu.edu
Message-ID: <8eccl3$s4d$1@news.tamu.edu>
Source record: 80484

For Sale: Yaesu VX-5 Tri-band Transceiver

I have used the radio for the last year, mostly inside the house or at the office. It has the barometer sensor, and the lithium ion battery. It comes with the original box and manual and includes the original antennas and AC charger. I also will inlcude the speaker-mic, and AA battery adaptor. Additionally you will get the filtered DC adaptor for use in your vehicle. I'll also give you the telescoping 2m/440 antenna that I bought to go with it - although you should know the tip is broken off. The radio is in great shape except there is a light mar on the display window, and general use-wear on some of the edges of the unit (eg., on the base where you set the thing on the desk).

I am selling it because I need the money to buy a mobile unit for my jeep. It's been a really good radio and my only complaint has been occasional IMD in heavy urban areas on the aircraft and 2m bands.

Some general info from Yaesu:
The VX-5R is a miniature tri band FM transceiver with extensive receive frequency coverage, providing leading-edge features for 2M, 440MHz and 50MHz amateur communications along with unmatched monitoring capability. The VX-5R's super thin profile and durable lightweight design allows you to take it anywhere- hiking, skiing, or while walking around town, and its operation flexibility brings the user many avenues of operating enjoyment. Besides the 50, 144, and 430 MHz transmit operation, the VX-5R provides receive coverage of the AM and FM broadcast bands, HF short-wave bands up to 16 MHz, VHF and UHF TV bands, the VHF AM aircraft band, and a wide range of commercial and public safety frequencies! With its unique optional Barometer pressure sensor unit provides readout of barometric pressure and altitude while mountain climbing and hiking. The transmitter section provides 5 watts of clean power output on the 50 MHz and 144 MHz bands with the supplied FNB-58LI high-capacity Lithium-Ion battery pack, 7.2V @ 1100 mAh and 4.5 watts output on 430 MHz. When 13.8 V DC power is supplied from external source, power output is 5 watts on all bands. With its high-tech design and revolutionary features, the new VX-5R is truly the only radio in its class that can do it all! The new VX-5R will continue to distinguish Yaesu as the world leader in amateur radio products.

The price is $360 OBO. I will be happy to accept a money order, or cashier's check, and I'll guarantee the unit is not doa (of course). Please let me know if you are interested. This unit new from AES with the accessories would cost you more than $430...

Just to play devil's advocate for a minute..... Sounds like you've had A LOT of experience with their repair dept. considering you've only owned 4 of their products. Why even keep buying them the 2nd, 3rd & 4th time if they keep breaking?? Also, if they NEVER charged you for the repair even when out of warranty & YOU thought they should have, Why complain when they finally wan't to charge you one time?? Sure you could buy a "used one" for about the price of a repair, but , HELLO, that's the same with almost all electronics nowadays. For example, New 2M HT's go for $99-$150, call any mfgr & ask about repair costs & it's usually like $60-80 labor Plus parts to fix one. Try to get a VCR fixed for under $50-80 at the mfgr's repair facility, ...new ones sell for under $100! As far as them lowering their warrinties to 1 yr, perhaps it is to stay competitive & keep costs down when Every Other Japanese & US mfgr keeps THEIR warranties to 1 yr or less....

GEE - and *I* thought that actually LISTENING to one in REAL LIFE situations was the ultimate test. It's certainly the way I bought MINE - now I guess I'll have to read the technical specs to see if I am REALLY hearing what I *thought* I've been hearing all this time - be a SHAME if I have to junk my nice radio because a set of printed specs NOW tell me it's no good...

That's as ludicrous as the "audio experts" on AM, who spend more time LOOKING at your received signal on a scope than they do LISTENING to what you are saying... "Eh, sorry OM, I missed most of your last transmission because I was busy putting yer signals thru my scope and spectrum analyzer - could you repeat?"

But twenty five and more years ago, there were such amplifiers.

You'd look in the big distributor catalogs, like that from Lafayette,
and you'd see linear amplifiers rated for about 100 watts, which
covered the range of 25 to 30MHz, and they'd all say "not for Class
D citizens band use". But those amplifiers were right on the same
page as the CB sets.

They were sold under the guise that they'd be used by hams or by
the Business Band that was also in that range (though I've never seen
enough details to know if the amps were legal there).

But it was pretty clear that they were being sold as CB amplifiers,
and the fact that they could be used for 10Meters was only a
way of legitimizing the product. I suppose some hams did take
advantage of these cheap amplifiers, I recall one article where
the author did use that Lafayette amplifier as a final to a solid
state SSB rig, but I'm certain they were in a minority.

Then, CB became even more popular, and the illegal activity that
had existed from the day the band was created, became more troublesome
because a lot more people were tempted. Companies wanted to make money,
so the quality of the product became worse, and undoubtedly the crowding
of the band by the influx meant that where many were satisfied with
illegal 100watt amplifiers before, they now felt they needed higher
power illegal amplifiers. And so conditions in the band got worse,
but interference to other services became noticeable.

And that's where the restrictions on 10Meter amplifiers came from
in the US. The law wasn't to restrict amateurs. but to clamp down

on those illegal, no-name linears that were being sold. I believe the sloppy equipment sometimes sold as "ham equipment" but only marketed towards the CBers was the main reason for this law. But of course, the problem overall was amplifiers that would work on the CB frequencies, and there was no way to have them work on 28MHz and not on 27MHz. So ham amplifiers had restrictions placed on them too.

I gather those sloppy linear amplifiers are still being made and sold, but at least it's clear that they shouldn't be, unlike before the law was in place, where the seller could say "But I'm selling it to hams".

Of course, since amateur radio is a technical hobby, the fact that someone has to deliberately install the tuned circuits to put their kilowatt amplifier on 10Meters shouldn't be a limiting factor. Or they could always build the amplifier from scratch. And if they need a lower power amplifier, nothing stops them from building it.

The ICOM 720A has a mod which allows general coverage RX/TX. Will this allow TX in the 11 meter band. WHY YOU ASK !! First off, read my entire post before you want to be-head me.

I run a local net on 27.385.0 LSB and I am currently studying code for my tech plus license. What I would like to do is operate in the 11 meter band (with the power turned down)and listen and learn on HF utilizing the same transceiver.

Is this possible with this ICOM transceiver, I read somewhere that in general coverage mode you can only tune in 1Mhz increments.

Any responses ?? If it's 11 meter criticism keep it to yourself PLEASE.

Thank you

Date: 2000-04-28 00:00:00 UTC
From: radio40@my-deja.com
Message-ID: <8eckcv$d50$1@nnrp1.deja.com>
Source record: 80492

The ICOM 720A has a mod which allows general coverage RX/TX. Will this allow TX in the 11 meter band. WHY YOU ASK !! First off, read my entire post before you want to be-head me.

I run a local net on 27.385.0 LSB and I am currently studying code for my tech plus license. What I would like to do is operate in the 11 meter band (with the power turned down)and listen and learn on HF utilizing the same transceiver.

Is this possible with this ICOM transceiver, I read somewhere that in general coverage mode you can only tune in 1Mhz increments.

Any responses ?? If it's 11 meter criticism keep it to yourself PLEASE.

Thank you

Attention repeater clubs, repeater owners and VHF/UHF operators!

We have new LDF5/50 and HJ5/50 7/8" Radiax cable for 70 cents per foot plus shipping. Cable Experts sells this cable new for over $5.00/linear foot. This cable provides .45 dB loss/100' at 150Mhz and .83 dB loss/100' at 450 Mhz.

Proceeds are to be used to purchase new radio equipment required for an APRS search and rescue radio club. If your club is interested in becoming a MERIT member please follow the below hyperlink.

4170. WANTED - Nice rotor (ham iv, tailtwister); will trade

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-28 00:00:00 UTC
From: jpl@hoserve.ho.lucent.com
Message-ID: <8ecn3q$d6u@nntpa.cb.lucent.com>

Cross-posted to: rec.radio.swap,nj.forsale,nj.wanted,rec.radio.amateur.equipment

I'm considering putting up a beam and am looking for a nice rotator -- something like a ham iv or tailtwister. I'm particularly interested in trading some stuff for it (I have a couple of brand new Fluke/HP multimeters, 620' of new rg 8/u coax, etc).

If anyone has a rotor they want to trade/sell, please let me know.

Thanks,
Joe KB2FSH

No criticism but to let you know that your transceiver is not FCC
type accepted nor approved to operate on that frequency. You use
this radio, even with the power turned down, on 27.385 and you
jeopardize your FCC license.

I wonder how many hams could do that these days. I know I'd have to drag out
and restudy some pretty dusty books. It's been 30 or 40 years since we could
save any $$ by building a transmitter or amplifier, making all but the geezers
"appliance hams".

I don't understand.
Is your complaint about SGC's new warranty or about them not
doing a free out of warranty repair?

You say that SGC has always given you good service before.
What, besides a bill for service, is different this time?
It sounds like SGC cut you a whole bunch of slack up 'till now.

You say in your msg that this is the 5th SGC tuner you have owned.
It's not clear how many of the 5 tuners you sent in for repair even if they
"seemed to be out of warranty". Maybe after all these no/low cost repairs
on different tuners, they have the impression that you pick up scrap tuners
for pocket change at the local hamfest, ship them to SGC for FREE repair
and then make a fat profit by selling or trading them off.

Knowing hams as I do, this is probably not the case. I feel sure that you
bought all 5 of the tuners, new in the box, from a local ham store and just
had bad luck with them. After each one was repaired you used it for a
while then decided to trade it for something you really, really needed.
And if you're like me, probably got the worst end of the deal!

Anyway, you can cost average the repairs on at least 2 of the tuners.
That brings the price down to $120/ea. While not cheap, it's still better
than paying full price for both.

73 de Bo

Not affiliated with SGC or anyone else for that matter!

I represent many different manufacturers' in the arena.
It is one thing to start a new Warranty procedure, effective new shipments,
but to reduce a Warranty AFTER the product has been shipped is a real
indicator of a problem! Either the product is faulty, or the manufacturer is
headed
for Chapter XX.
I would check out the manufacturer to see if this Warranty is a change in
policy,
or if the "other" guy has a beef with them.
SGC if I were you, I would probably make some sort of public statement.

Cutting back on warranty is IMO one sign a company is not long for this world. It opens the door to cutting back on QC, too.

I have put sidearms made of TV mast on a tower by using u-bolts or
even stainless steel hoseclamps. Have also heard of fiberglass poles
being mounted in same way. You need to be careful of how much weight
is being added to the tower and how much weight the sidearm will hold.
Also be careful that the side member does not create a lost of twist
on the tower. Good luck. 73, Dan K0DAN (cslc82@email.mot.com)

Of course, this doesn't stop the "QROO" CBer's from getting into the
multi-kilowatt range anyway (often mobile!). I think that they're
trying to get corona discharges from their 1/4 wave whips...

The real good deals are on older tube amplifier gear that aren't subject
to these limitations. For example, the Yaesu FL2000 and 2100 series
amps provide a nice way to get 500 watts output on 80-10m.

I have a late model (1999) Kenwood 950SDX, and it is slightly
off frequency---about 50Hz. To zero beat WWV at 10 Mhz, the digital
readout reads 10,000.05 . I have an older 950SDX up for auction on
Ebay, and that one is right on---EXACTLY.

I would like to bring the newer one "right on". On the rear
panel, there is a hole, and a trimmer in the hole. It is TC-1, the
reference oscillator frequency adjustment trimmer. Is this what I
adjust to bring the digital readout back on 10,000.00, or is the
reference oscillator different from the TCXO ???

I had an 830S before these 2 950's, and the adjustment trimmer
for that one was called the "standard oscillator trimmer", not the
reference oscillator trimmer.

Has anyone out there had any experience with this
adjustment ??? All answers are welcome.

4196. Re: FS: Ham Gear....just in time for the new SLOW CODE licenses

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-29 00:00:00 UTC
From: bowenb@best.com
Message-ID: <390af9cc.48378615@206.184.139.132>
Source record: 80403
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

Gentlemen,

I've held back and just copied the mail on this thread for a week or so and not said anything, but now I've got to put my $.02 into this.

I passed my Novice back in 1962 at the age of 13 and build my own first rig from parts (not a Heathkit, but from designs in the ARRL Handbook, mostly from parts salvaged from old TVs and such), my General in 1963 and Advanced in 1969. Let my ham license lapse in 1984 because I'd lost interest in the hobby (for many and various reasons, but the main one was I got totally involved with computers and was living in a high-rise apt. that did NOT lend itself to HF operation). Kept my last HF rig (an SB-104A with all the accessories) until 1986, then sold it (yeh, that was a DUMB thing I did - wish I still had it). Still have my old 2-meter rig (a Motorola MetrumII - if you're not familiar with that model, it was a rig Motorola sold in the mid-70s; a converted Triton VHF marine rig, built like a tank and even waterproof).

Held a 1st Phone with Ship Radar Endorsement from 1967 until the FCC converted that to a General Certificate in the early 80s. Been in the radio business commercially from 1970 until 3 years ago (moved over to the computer side of electronics as my full-time work).

I say all this as a preface to those who think I just may be a newcomer - I've lived 51 years on this planet and I've seen a lot of things (like the 10KW amp a ham I know in Ohio built {no, I will NOT mention his call - he is still alive and active} using an electric company pole transformer for a plate voltage supply and various pieces out of an old retired Continental SW broadcast transmitter).

All that having been said, I take GREAT offense at W5AK's final remark. How DARE you say that just because a person took the Extra test after 4/15 that he (or she) is any less an Extra than someone who took the test 30 years ago (and I remember the old days when you had to copy 1 minutes with no mistakes in front of an FCC examiner AND transmit for one minute as well without a mistake). If anything, the newer Extras probably had to study HARDER for the test, since the level of the technical test is higher than it was then (did you get any questions on RF exposure and all the newer subjects when you took the written?).

The test is just the "admission through the doorway". What you do with that ticket shows whether or not you are a "REAL" ham; one that upholds the traditions of Mr. Maxim or is just your common "lid". I've

heard more than my share of old-timers I'd place in the "lid" catagory in less than 1 microsecond. Yes, there is a learning curve, just as there is with driving. I have personal friends that have been driving for 30+ years that I would not ride with to the corner 7-11!!! Some of them make WW2 kamakazi pilots look sane!! On the other hand, I had to hitch a ride with one of the kids from work the other day when my car was down: he is 22 and has only been licensed for 3 years. His driving skills embarass me - this kid is great. So, once you get over the initial learning curve, the basics of the person themselves determines whether they become a competent driver (or ham operator) or not. If you are a "lid" as a human being, chances are you'll become a "lid" with a microphone in your hand.

I guess maybe it is a manifestation of trying to "recapture my youth" that I've gotten my interest in ham radio rekindled. I'm going to get my license back, and I'll probably just go straight for the Extra (just making 13 WPM for me was a struggle, and I'll admit I'm not a "CW Person"). And I'll be damned if I'll feel any less proud of that new ticket than if I had passed it back in the 70s when 20 WPM was needed.

I saw 2 items in the latest QST that I think all of you, but ESPECIALLY those in the newsgroup that are knocking various folks and making insulting comments like those of W5Ak should read:

The first is a letter from Dave Mitchell, K8DM, about an SK, W2OY, and how Dave (who has been a ham for over 35 years) learned from emulating the example of W2OY. The letter is on Page 24 of the May issue and is titled "No Lids, No Kids, No Space Cadets".

The second article is on Page 80: it is an Op-Ed piece written by Vic Curtis, WA3YUV, titled "Okay in My Log". Vic's piece is a reply to a letter in the "Correspondence" column in the April issue from W7YV and his comments about "newly-minted Extras" that is in a similar vain to W5AK's comments. Vic says it a hell of a lot better than I can. READ what he says and take it to heart.

OK, now I'll come down off my soapbox . . . and close with a modified version of a famous Martin Luther King quote:

"I look forward to the day when hams is judged by the quality of their operating skills and NOT by when they got their license".

Regards.

Building a satellite control receiver here and found in the
current 73 magazine, the perfect receiver on a chip for our
project. I have tried to make contact with MICREL (San Jose)
via phone and website and no response backfrom them. Has
anyone make contact or can you recommend a person to speak with?
We just need a few of these for prototyping and to put in our
main satellite.

I suppose the standards for obtaining a degree to practice medicine should also be dumbed down, then most anyone could qualify. We could all then have our personal doctors and not have to sit in a waiting room long after our appointment time. Let's see now, there is no testing requirement or even a license for CB. So, why not just do away with all testing and license requirements for ham radio? I think the same should then apply to airline pilots. Why does more make things better? You say the hobby is not doing well? What about our country? This line of thinking is polluting America! Keep up the good work folks. Dave-KA4CNH

>> with a BNC pigtail for the fellow that wants one.

>I want a BNC ON THE CHASSIS..........WHY can't that be done?

Not a good choice for mobile use, since vibration can cause a BNC
to "rock" back and forth a bit, eventually causing a poor contact.
Where there is vibration present, any connector that uses a screw
nut will be more reliable. The TNC is the connector that's equivalent
to BNC but with a screw nut. N, SMA (for low power), and even SO-239
(UHF) are all better than BNC.

Hy-Gain produced three beam antennas all with the "Long John"
designation. They were as follows: 105BA for 10 meters, 115BA for 15 meters
and 205BA for 20 meters. The boom length will tell which you are interested
in. 105BA=24 FT., 115BA=26 FT., 205BA=34 FT. I hope this will help you.73,

Sir,

If you are going to post an item that is for AUCTION, please do NOT use "FS" in your Subject line. This is misleading. It would be much more appropriate to use "FA" instead.

I am looking for a copy of the instruction sheets that
originally came with the Kenwood DRU-2 Digital Recording Unit, and the
VS-2 Voice Unit. If you have either one, please E-mail me & let me
know. I will gladly pay any copying and postage fees. If you have a
scanner, and could E-mail it to me, that would make it much easier.

Thanks,

Source record: 80433
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.boatanchors

I need an interface to key a Collins 30L-1 amplifier with a Kenwood TS-850 to avoid stressing and possibly destroying the relay in the TS-850. I know I have seen such a circuit before, but I can't seem to find it right now.

Does anyone have the schematic or a description of a suitable circuit? One that can be put together with parts from the local Radio Shack would be a plus, as I could get it going tomorrow.

Thanks and 73,
Jeff, KC1MK

Lottoman,
Look around on the firewall, see if there is a plugged
access hole. If so, cut out the 'stopper' enough to feed
a power lead through it. If no access hole, drill one large
enough for the power lead AND a rubber grommet.
There are access holes 'all' over a vehicle, just gotta
find one....

4231. Icom W32A Handheld Transceiver Question

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-29 00:00:00 UTC
From: Artur Leung <al3828@REMOVEsunflower.com>
Message-ID: <390BB67C.8D6D06AF@REMOVEsunflower.com>
Source record: 80438

Hi,

I would appreciate if someone owning an Icom W32A could answer some
of my questions related to the unit before I make my purchase decision:

1) Which battery does the unit come with? Icom's web site says nothing
about the battery in the package, but it states that the T7H comes with
the BP-173 which allows the unit to transmit at max. power (6W). Is it
the same for the W32A? How long can the radio operate on a
fully-charged battery?

2) How good is the antenna? Do I have to purchase an aftermarket
antenna specially for 2m in order to increase the transmit distance?

3) The immediate use of the HT will be line-of-sight transmission on 2m
simplex with a distance of 4-6 miles. Do I need to connect the unit to
external power source (to achieve 5W tx power) in order to carry out the
transmission?

4) What kind of accessaries will be worth purchasing when I purchase the
HT?

5) Ham Radio Outlet has it for $269.95. Is it a good price?

Thanks.

Artur

I have come across an old Collins SM-2 microphone (no stand, no
cable) in good condition. However, I don't have a way to test it.

Q: What are the signals on the 4 (four) pins on the mic?
(please forgive me, but I'm unfamiliar with this configuration. I'm
used to seeing a 3 pin switchcraft type of connector.)

Q: What would be a fair value for this (assuming it, in fact, even works)?

Many thanks.

I understand that back in the 1980s or maybe early 1990s there was a ham by the name of John Beal or Beahl, who manufactured outstanding low band mobile antennas. I have heard he live in Colorado or Washington DC.

Does anyone know if this guy still makes these antennas or where I could get a set of used ones?

It is also an actionable breach-of-contract in most states to change, downward, the term of a warranty after the sale is final. A warranty is part of the contract, and withdrawing it is a breach. Be careful to understand the legal distinction between a guarantee and a warrantee. If you have a guarantee, that is less of a protection for you, and the company issuing it may be able to back out of it.

de Will KD7BFX

4251. Barriers of entry

It's a two-edged sword, eh? The barriers of entry are reduced and, hence, one can get to a General or Extra Class license pretty quickly (I have the now defunct Advanced Class.)

On the other hand, the hobby is not doing well. Repeaters in my area that were a blast to be on 8 or 9 years ago are not quiet just about all day. I don't see many young people joining the hobby in my area. (And, yes, I do try to get the ones I know to give it a try. I offer to pay for the training materials and buy them an inexpensive 2M HT if they pass.) The internet offers instant gratification with little investment of time, money, or work. So, maybe simplifying the license structure and lowering code speed requirements might bring more folks into amateur radio.

I hope so.

Take care,
Erick

FS: Motorola 2-Way Trunked Radio System "Maxtrac 800" (410) Baltimore, Maryland, MD area

Dear News Readers,

I am selling my 5 unit, 2 base station Motorola 2-Way Trunked Programmable Radio System "Maxtrac 800". It runs on 800 megahertz frequencies. I will sell the system whole or separately.

For more information and photos, please go to our web site at:
http://www.takingcareofbusiness.com/vehicles/radios.htm

I am asking $750 for the system complete. All offers will be considered!

"BEST OFFER" GETS THE RADIOS !

The system specifically consists of:
5 Motorola 2-Way Trunked 800 MHz Mobile Radios "Maxtrac 800" Programmable
15W 1 System / 1 Subfleet ($3,907.50 new)
2 Base Control Stations ($748.00 new)
1 Deskset Base Station Extension ($434.11 new)

The system was used for my towing company, and we have reduced our fleet and have decided to utilize cellular communications. In Baltimore, a company called Nextel has purchased and is converting 75% of the analog 800 megahertz frequencies to digital signal only, reducing the system my radios operate on. The system was running on 20 different channels, and will probably be reduced to about 5 channels which might be pretty crowded in Baltimore, depending on how may radio users switch to digital or cellular.

If you have any suggestions on any places on the internet that I should advertise these radios, I would really appreciate your advise.

You jeopardize your license even before you get it. It would be very
disappointing to have that happen.

I had the Icom 730, a really fine mobile rig, and it had the WARC Bands, but not general coverage receive or transmit, and no modification would make it so. You can get all the code practice you want with any tranceiver by tuneing down in the cw portion of the band. You can practice sending by putting a dummy load in place of the antenna and cut the power level all the way down and listening to your keying from the sidetone on the rig if you don't have a license. I'm not positive of this, but I think cw is illegal on 27 mHz. Modern rigs can tune into the 100 hertz and less increments.

Source record: 80541

TR-4C
MS-4 speaker
power supply installed in the rear of the speaker cabinet
Original owners manual

I sent in in to Drake about 7-8 yr ago to have it tuned up. When I got it back, I probably didn't use it for more than a month and then bought a Kenwood. About once a year, I fire it up and let it run for a few hours just warm it up and dry it out good.

It tunes up on all but the 15mtr band and one of the 10 mtr bands. (10 mtr is divide into three sections) If you wiggle the band switch knob just right, the power meter will jump just momentarily. So I'm pretty sure its just a bad connection.

Asking $275.

Located in the Washington D.C./Baltimore area if you can pick up.
If the buyer doesn't have a method through their work or a preference for shipping, I'll put in on Fed Ex two day for $25. Because of the weight (mainly of the power supply) it may cost a few bucks more than that to ship, but if it is, I'll cover the excess.

T.O. Galloway
E-mail to tgall@erols.com or
703-569-6538. I travel 3 or four days a week, so leave message if I'm not there.

The 720 will broadband. All it takes is a 4,7k ohm resistor to ground on
a pin on the back panel molex connector. Works fine. I do not remember
the pin as I sold the 720 many years ago.
Paul.

Carl,
What is the problem on your PLL? I have a number of 211s working and the biggest problem that I have run into is the rotten plated through holes failing. Try resoldering all of the troughs and passing a bit of copper wire between the holes. It has recovered units for me. Nice radio, but boy that was early technology for ICOM.
Paul

Source record: 80296

For all of you guys that read my former post asking for info
on a Kenwood 950SDX that was off frequency, here's the answer. Remove
the top cover. Remove 3 screws on the rear panel, and 4 screws on top
of the sub-chassis. Remove the 2 small cables with RCA plugs on them
from the rear panel. Swing open the sub-chassis. Look at the right
rear corner of the carrier board. You will see the SO-2 TCXO, and
right behind it is a switch marked S-2. The switch must be in the left
position. This is the TCXO position. Mine was in the right position.
The right position turns on the old style crystal controlled non
temperature compensated reference oscillator. Both of my oscillators
were off frequency, so I adjusted them both for a zero-beat with WWV
at 15 Mhz. On the 950SDX, the TCXO is factory installed, but on the
older 950 S & SD models, it was an owner installed option. Kenwood
still uses the same carrier board in the SDX model as they did in the
older ones. That is why the switch and the older non compensated
oscillator are both still there. Now, the radio doesn't drift more
that 1 or 2 Hz from cold start to full temp. It used to vary by as
much as 50 Hz.

Many thanks to Keith (KS9C) for his invaluable information.

BD,

No, I think he asked so he WOULDN'T have water everywhere! I have been installing gear, pro and amateur for years. (I am also a FCC 1st class) If you have to drill, make sure you use a grommet (rubber) and then seal it in after running the wires through it with as much silicon as you can. Smells for awhile but it will stop any leaks and solve any metal to metal fatigue.

Also, try not to run any power cables near any of the vehicles electronics. Tie wrap connection so they stay in place.

If you don't ask, you won't learn! Unless you want to try as you go and pay for your mistakes!

Good luck!

Date: 2000-04-30 00:00:00 UTC
From: mikezabel@uswest.net
Message-ID: <390ca50d.272177205@news.uswest.net>
Source record: 80301

Hello,
I am in the process of upgrading to general, and buying my first HF rig. I have studied the product reviews from QST back issues and have narrowed my choices to IC-745, 735, 751, or Kenwwood TS-440s.
In studying the specs for the 735 and 745, the reciever numbers look a little better for the 745, but I have heard of problems with the reciever in the 745 "blocking", or "overloading" in the presence of a strong signal adjacent to the one you are trying to recieve.
Does anyone have experience with this? I am interested in DXing, WAC, WAS, not really contest work. Should I be concerned about the "blocking" issue, the reciever in the 745 looks pretty hot for a mid '80s radio, I would like to give it a try unless I get some bad reports from you guys.
Thanks,
Mike Zabel

Hello!!
I have a web page dedicated to the radio hobby here in Tampa Bay Florida. I am in the process of launching a new audio chat network on a channel for amateur radio enthusiasts. The idea is for webmasters to put the small html code somwhere on their amateur radio web page which would be linked all together worldwide. The system utilizes the new HearMe plugin which is a small 80k or so program new visitors of the amateur radio audio chat would download upon landing on the page which has the html code for the plugin. Please let me know if you decide to use the system so I can add your site to my links page to let others know your site is connected to the network. For a demonstration of the system you may email me for a time and date so you can see it in action. To get the html code please visit my web site below. To get further info on the HearMe requirments to have it work click on the help are for Hear Me on my web site. I am in no way affiliated with HearMe and my web site is a noncomercial page.You may also visit my radio page at the url below from 7pm to 8pm eastern time every day I try to be in my scanner audio chat at that time. I look forward to hearing from.
Thankyou
Best Regards
Tim Breckon--

Source record: 80316

Mike -

I have been using my IC-745 for 15 years, both mobile (in motorhome) and fixed. I have always like the radio. The only weakness in the design (not limited to the 745) is that the radio will lose its "brains" if you let the backup battery go too long. I finally replaced my ROM board with one of the Willco memory boards which give you up to 1,024 memories, depending on how you configure it. It also eliminates the battery problem.

The 735 is a good radio too, but I like the ability of the 745 to have an internal power supply. If you use it on Field Day, portable, etc., that is a big advantage to me. My 745 serves as a backup radio now, but I don't think I will ever get rid of it.

As the other respondents have shown you, there's a plethora of logging software available. The best way to judge, is to start with those companies that offer free trial downloads. Such is the case in Log-Eqf, Logger, DX4WIN, and numerous others. A good place to look is the web site: www.ac6v.com . Take care. K4MDB

4290. Mobile installation in Jeep Grand Cherokee?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-30 00:00:00 UTC
From: Ron Klein <ronklein@ix.netcom.com>
Message-ID: <4unpgskcjj01ret7e00pkhb298ptg0fs1n@4ax.com>
Source record: 80319

I'm considering buying a 2000 Grand Cherokee Laredo and would want to
install a VHF/UHF transceiver in it, as I have in my existing
'98 Cherokee. I'd expect to use my Icom 207 dual bander with a dual
band mag mount antenna on the roof

Is there anybody that may have 2 meter/ 440 transceivers
installed in 1999 or 2000 Grand Cherokees who watch this newsgroup?

I'd like to be sure there aren't reported problems with EMI/RFI in the
Grand...

Comments, anyone?

Well, from the 'what can you hear' perspective, I think 40m is a much
more interesting band. If you want to do anything on the radio
at night when the sunspots die out, you'll want 40m, I think.
(I'm not familiar with the loops, so there may be some issues
related to that I don't know about.)

4293. Re: 6 Meter Gear

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-30 00:00:00 UTC
From: jimk2000 <insgeeksNOinSPAM@mindspring.com.invalid>
Message-ID: <38a139f2.d9f25476@usw-ex0106-048.remarq.com>
Source record: 80322

All mode 6 meters only mobile/portable is really limiting your choices. There is the Yaesu FT 690. No longer in production but available used in the $400 range. It will also operate from batteries if you buy the battery pack. However, it is only 10 watts. Then you might have to buy an amp which brings the price up considerably, another $350 new. For a little more money you could buy an Alinco DX70TH which is a moblie HF rig plus 6 meters at 100 watts. If you are interested make sure you get the "TH" model not the "T" model which has only 10 watts on six meters. ICOM also makes an HF mobile rig with six meters, ICOM 706 series.

If you just want FM mobile there is an Alinco model DR-M06TH at 20 watts priced around $250 new. Again on this radio make sure you get the newer model because the older one was only 10 watts. Kenwood also made a tri-bander with a 6 meters module available, FM only.

Dollar for dollar your better off buying the HF mobiles with six meters than buying a mono-bander.

Please note that I am not endorsing any of the HF mobile rigs since I have not had any experience with them. However, I did own the Yaesu all mode and Alinco FM mobile mono-banders and they were both very good but limiting because of the 10 watts max. Several years ago alot of 6 meter operators had only 10 watts so it was fair game. Since the introduction of these new mobile HF rigs the stakes have been raised. Also keep in mind that when 6 meters is open you can work alot of stations with only 10 watts. I worked the Carribeans, Cuba, Canada, Mexico etc. However, when the band is not wide open it becomes marginal. You also have to factor in the antenna, your location etc.

As far as antennas go there are plenty of good ones available if you research it out.

From: Stephen M Mandich <STEVEMIKEM@prodigy.net>
Message-ID: <8ej81l$su4$1@newssvr04-int.news.prodigy.com>
Source record: 80323

Robert:
12M is one of my favorite bands this year. I am working a surprising amount of DX on it. It is less crowded and easier to break through the pile-ups (with my 100W and doublet). When 10M is open, I always check out 12M and am usually happy. Listen on phone and especially CW. While the sunspot cycle is at its peak now, if you want DX, its a hard band to give up.

Steve, K6NT

From: jbsummer@aol.com
Message-ID: <20000429214952.20567.00000368@ng-fb1.aol.com>
Source record: 80348

I have just shuffled a bunch of memories in my FT50 and am wondering if there's any way of erasing old memory slots without having to reset the unit to defaults and reprogram.

The situation is such that there are some old memories in their original slots I don't want to scan and right now, the only way I can accomplish this is to assign a "skip" function to them via the keypad, leaving them in place. Not the biggest pain to have to do but it would be nice if old memory slots could be deleted back to unfilled status.

Thanks,
Jim KF4KNS

FS -HT's,Scanner,Data Decoder, Repeater stuff

I'm selling the following:

Universal M 400 decoder -$250
New Bearcat Trunk Tracker Scanner BC235XLT - $100
Icom W2A Dual Band HT With Desktop Rapid Charger - $150.00
Motorola UHF MX350S (Synthesized) HT With Rapid Charger - $50
2 Motorola UHF MT 50's With Rapid chargers $50 For the pair
Icom 2410H Dual band Mobile (Not working ?) with all cards installed, Voice chip, DTMF chip, PL Decode chip - $150.00

Repeater stuff to if interested.

2 Motorola UHF Syntors - $350 Pair
1 Motorola Micor Med - $75
Scom 7k Controller - $300
200 Watt Henry Amp - $250
Phelps Dodge PD 526 , 6 cavity Duplexer - $400
Astron 50 M Power supply - $100
Diamond X50 Dual band Antenna - $50
2 DB Products Circulators - $100 Each

Thanks, Chris

Artur Leung <al3828@REMOVEsunflower.com> wrote:
>the same for the W32A? How long can the radio operate on a
>fully-charged battery?

The battery it comes with is the BP-173. The transmit power of the
W32 is given as being 5W with this battery. It operates for about 4-5
hours when receiving both both VFOs and doing little transmitting.
With only one receiver in use the life goes up by nearly a factor of
two.

>external power source (to achieve 5W tx power) in order to carry out the
>transmission?

I cannot comment on whether or not you will be able to transmit 4-6
miles with it on 2m, as this depends largely on where you live (though
presumably you live in a rural area, because you won't get anywhere
close to four miles on 5W simplex in the city). I can say, however,
that to the best of my knowledge connecting an external power source
will not increase transmit power. This radio is not like the Yaesu
VX-1.

>4) What kind of accessaries will be worth purchasing when I purchase the
>HT?

That depends entirely on what you want to use it for, of course. I
have a speaker mic for mine and I'm happy I do. Some people also
highly recommend a carrying case for it, as the writing will rub off
of the buttons otherwise.

>5) Ham Radio Outlet has it for $269.95. Is it a good price?

It's about the same price as other vendors are selling it for at the
moment.

4306. HAL PCI - 4000 TNC for sale or Trade

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-30 00:00:00 UTC

The best of the best! HAL PCI-4000 digital modem. Sophisticated DSP
processor performs Clover, RTTY, Pactor, Amtor. Works with Express, XPWin,
Writelog, WF1B, XPPCI. Requires 1 full ISA slot but does NOT require an IRQ!
Card is 'A' model, serial number < 600, with latest proms. This is the tnc
that the abbreviated P-38 TNC was designed from. A similar card can be
special ordered from HAL for $995.00
$400 cash or trade for Ham equipment of equal value.
73, Luke

Dave,
I hate to break it to you, but an amateur radio license, even an Advanced class, is not in the same catagory as a doctor's or an A.T.P.'s (airline transport pilot) license. As for CB, the amateur radio service lost those frequencies back in the mid-50's, get over it. The "line of thinking" that does the most damage to our hobby and the country in general is the elitist "I got mine the hard way! So you're no good and I'm not going to talk to you except to be rude and rub your face in the dirt." If the present hams like you were more friendly there'd be more new hams entering the hobby. Does the term "Elmer" ring any bells? I first got into ham radio back in the early seventies but a trip overseas interupted my progress (novice being a one-shot license in those days). I just got back in as a (you know it's coming) no-code tech but I've already purchased a Kenwood TS-440S/AT and am going to brush up my code and go for General. I'll tell you, though, the attitude of some of the older hams out there have really dimmed my desire to drag out the bug and go CW.

jbsummer@aol.com (JBSummer) writes:
>I have just shuffled a bunch of memories in my FT50 and am wondering if there's
>any way of erasing old memory slots without having to reset the unit to
>defaults and reprogram.

You can "mask" a memory so it doesn't participate in scanning and turning
the knob in memory mode won't find it. But it isn't possible to reset
it to "unused" status, which shows the little "u" in the channel display
when you're selecting a channel to store into. See the manual for
how to do masking.

But to reset it to unused, you either have to reset the radio, wiping
out all the channels, or load data into the radio from another radio
using a cloning cable, or using a PC and programming software. Either
way, you reprogram *all* the memories.

Murray,
I have looked at my manual, so have a go at this:

BEEP: The beep can be turned of or off.
Press the F key for longer that 1 second, then press the REV/STEP key while the F key indicator is flashing. Each time this is done, the beep is turned on or off.

OR

I will scan the next bit as its a bit long and send it via e-mail.

You did not say if you purchased all your couplers new nor if the present coupler was used--if so, why should SGC honor the warranty? They don't indicate it is transferrable. I agree with the others--SGC likey has cut you some slack on free repairs but you keep sending them damaged used goods to repair. SGC has always treated me fairly and promptly on warranty repair of items I damaged that I bought new. If it is only 2 caps--just replace them yourself. At least SGC was nice enough to troubleshoot it for you and tell you what was wrong with it, and the fault was likely not SGC's that the caps went bad in the first place!

Bill,

Don't think for a moment that W5AK's attitude is the prevailing one - I DO NOT believe that is the case.

I'm a long time ham dropout myself - 16 years. I'll be damned if I'll let a few small-minded people that are so full of themselves and their importance on this Earth determine whether, once I get my license back, that I am or am not "one of them".

The FCC and the VEC determine whether you have the basic skills to become a ham: from there on, YOU are the one that determines whether you are a ham or a lid.

You might want to read a previous posting of mine in this newsgroup in the thread "FS: Ham Gear. . .just in time for the new SLOW CODE licenses". Also, go out and buy a copy of the May 2000 issue of QST - I reference a couple of articles from the magazine in there that you should read.

Yes - the clicking is coming from the regulation circuit in the battery pack. It is "telling" you that the charge is almost complete.

Scared the heck out of me the first time I heard it! <g>

Bill,

I let my General license expire in about 1972. I just got back into amateur radio about a year ago. I'm enjoying it tremendously. On the air -- where it counts -- is a much more friendly and polite environment. These news groups seem to bring out the worst in all of us.

I hope to see you back on the air sometime.

By Jove! I believe you've got something there, O.M. ! We need higher barriers if we are to keep out the riff-raff. I shall hereby propose the following basic requirements:

Technician: At a minimum, a Bachelor of Arts or Bachelor of Science degree from a major accredited university.

General: At a minimum, a Doctorate degree from any major accredited university.

Extra: At a minimum, A PHD from Harvard, Yale or Oxford, with a heavy emphasis on debate and public speaking.

With these new requirements, we should be able to restrict entry of an elite few into the upper ranks of amateur radio. Anyone lacking the intelligence, desire and committment to attain a college degree to become a station operator, could operate anyway on 27 Mhz. That should open up the ham bands for the really serious operators and keep out most of what we presently have, the amateur riff-raff.

SK, DE, 73's (plural) and all that good stuff, etc., etc., etc.

Garnet,

I am afraid there is little point in getting a copy of the cal chart for another meter. AFAIK they were individually calibrated - at least that's what mine claims. So you need to recalibrate.

Source record: 80443

(My apologies if this shows up twice. I posted this from work with Deja.com, but it never showed up on my ISP's news server.)

My grandfather (K5HDP) passed away a few years ago and we are slowly liquidating his belongings. He was a pioneer of amatuer radio from the 20's to the 80's in western Oklahoma. Most of his equipment was hand-designed and hand-built. We would like to donate the equipment to a group that might appreciate it.

We currently have five boxes full of cases, parts, multi-testers (very old), caps, rheos, manuals, etc. There is one box full of RCA tubes, still in their
original boxes. I'd estimate the total weight at about 200 pounds.

Is there a museum or group whose charter is to preserve this type of knowledge and equipment? If so, can someone provide me with contact information? Failing that, we would be happy to give it to an individual, for the cost of shipping.

Come on Dave, give me a break.

An MD and a HAM are on the same level?? If you think that,
maybe... I don't know, that kind of attitude just has no response
worth printing.

The other aspect of your attitude I find disturbing is the implication
that a HAM license is a final exam. That's the same elitist BS
attitude that caused all the conflict in the first place. You know
what I feel is the closest equivilent? The CBers who 'sit' on a
channel and say it's 'theirs'.

Get off your elitist horse. You HAM radio license is NOT a grant
of rights and privlideges. It's an entry exam. And after that it's
what you make of it. As soon as you fall into the trap of thinking
otherwise, well, I'm sure a lot of people can come up with
some descriptive terms to match.

4355. Re: Give up 12m or 40m?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-01 00:00:00 UTC
From: Howard Lester <hlester@as.arizona.edu>
Message-ID: <390DC1A7.567BFE97@as.arizona.edu>
Source record: 80251

I HAVE and use the 10m-30m antenna. It works very well. However,
the efficiency on 30m is about 50% from that of a regular dipole;
consider what it must drop to on 40m.

But even if the 40m efficiency is only about 25%, it should still give
you decent contacts. I imagine the tuning will be VERY sharp on 40m.

If you do go with the 40-15m version, do you have room for a 10m
antenna, considering they can be made fairly small? (BTW, don't
worry about losing 12m. It's a good band, but not "necessary",
considering your situation.)

General coverage and under $400.00 might be a bit tough, but close.

A used Kenwood TS-440 or the Yaesu or ICOM equivent. Should be about $400.00-$450.00. Seller should include the original hand mic or equivlent.
The TS-430 I beleive is not general coverage, but I can stand to be corrected. Both have auto antenna tuners and are very good radios.
There is also the TS-120/130/140 family, but I am not sure if or any of these has a general coverage receiver and no internal antenna tuner.
Again, check the competing models.

You will also need a 20A+, 12V power supply, about $75.00-$100.00.
Someone was selling a used Astro 35 A supply for $100.00, so this will give a good ballpark price.

E-Bay is a good place to look, but prices tend to run high. Check out some of the news groups and bulletin boards such as www.qrz.com

Best of luck and 73's

Dennis WB3KUM/9

4372. Finally! 756PRO Review on ARRL web site

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-01 00:00:00 UTC
From: David Rich <kgous@swbell.net>
Message-ID: <390E4853.1A4EB753@swbell.net>
Source record: 80268

It sure would have been nice to have those crystal filter options in the

IF stages before the DSP! The 15 KHz crystal filters are a bit wide.
The really sad thing is that the original IC-756 may have better test
results with the 500 Hz IF filters installed than the IC-756PRO. Check
for yourself on the ARRL website or in your old QST magazine review of
the IC-756..
Oh well, better luck next time.

Good Luck,

Dave KG0US

756PRO review June 2000 page 68 versus 775DSP review in January 1996
page 68.

Best Minimum discernible signal 500 Hz IF filtering:

Freq 756PRO 775DSP 775DSP better by

1.0 MHz -117dBm -131dBm 14dB
3.5 MHz -141dBm -143dBm 2dB
14 MHz -140dBm -143dBm 3dB
28 MHz -140dBm -145dBm 5dB

Blocking Dynamic range with 500 Hz IF filters Preamp off:

Freq 756PRO 775DSP 775DSP better by

3.5 MHz 127dB 139dB 12dB
14 MHz 127dB 137dB 10dB

Two Tone, third order IMD dynamic range with 500 Hz IF filters and
Preamp off:

Freq 756PRO 775DSP 775DSP better by

3.5 MHz 92dB 106dB 14dB
14 MHz 95dB 106dB 11dB

3.5 MHz +13.5dBm +20dBm 6.5dB
14 MHz +15.4dBm +21dBm 5.6dB

4373. Oh My God! the orginal IC-756 tests better than the IC-756PRO

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-01 00:00:00 UTC
From: David Rich <kgous@swbell.net>
Message-ID: <390E48B2.A5E226F7@swbell.net>
Source record: 80269

I checked the review of the original IC-756 and it tests out better than

the IC-756PRO in every case except the minimum discernible signal measured at 3.5 MHz. At this frequency the original IC-756 has a best measurement of -139dBm while the IC-756PRO was -141dBm. Check the review of the original IC-756 on the ARRL members only web site or in the May 1997 QST on page 64. I only glanced over the HF tests not the 6

meter measurements. You can find the review of the IC-756PRO on the ARRL

members only web site.

Interesting,

Dave KG0US

4374. Li-Ion battery

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-01 00:00:00 UTC
From: Roger <beetle168@hotmail.com>
Message-ID: <sgsmifuo1g2146@corp.supernews.com>
Source record: 80270

I have a newbie question regarding the Li-Ion battery. How to take care of this kind of battery so it will last longer? Is it true that the Li-Ion battery last longer if the charge interval is smaller? like keep it charged full all the time instead of use it till it's empty before charging it?

Thanks for your help.

Source record: 80324

FT-10/40R FEATURES

ï¿½ A16D 16 Key DTMF with DCS enc/dec, CTCSS enc/dec, ARTS, 99 Channels.
ï¿½ MIL-STD 810 Rated
ï¿½ Full 5 watt
ï¿½ Battery Charger for all size batteries compatible with FT-10R
ï¿½ Auto Range Transpond System (ARTS), This new system alerts you visually and audibly when a companion handheld is out of simplex range. A built-in CW ID is also included.
ï¿½High Output Audio High technology speaker design produces higher output even with it's compact design.
ï¿½ Alpha-Numeric Display 4 Character Alpha Name can be used to name your memory channels.
ï¿½ Digital Coded Squelch Included to allow quiet monitoring of busy channels.
ï¿½ Direct FM Improves packet performance and voice quality.
ï¿½ Dual Watch, Allows you to monitor an in-band sub channel for activity.
ï¿½ High Speed Scanning.
ï¿½ Top Notch multifunction control knob.
ï¿½ RX / TX Battery Savers, The FT-10/40R includes both transmit and receive battery savers for maximum battery life.
ï¿½ Omni Glow Backlit LCD Display.
ï¿½ 4 Power Output Levels, Low 1, Low 2, Low 3 and High Power levels are selectable to extend battery life.

What I have for sale:
FT-10R A16D 16Key Radio w/ AC Adapter
MH-34B4B: Speaker Microphone
E-DC-5B: DC Adapter w/ Noise Filter

Extras:
(1) ADMS-1B PC Programming Software allows quick and easy programming with your PC including data cable
(1) Foam padded full cover with belt loop

The average price I have seen just the radio forsale is $350. The microphone and DC adapter are around $30 each.
I will sell everything listed for $275.
This is a very lightly used radio. I am selling because I decided to go with a mobile radio instead.

Please email pitre@azstarnet.com with any questions or offers.

4378. Give up 12m or 40m?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-01 00:00:00 UTC
From: Robert Joshua Chen <rjchen@Stanford.EDU>
Message-ID: <8eik2a$2r6$1@nntp.Stanford.EDU>
Source record: 80326

I'm currently deciding between MFJ's 10-30m and 15-40m loop antennas. I live in an apartment with a small balcony and no roof access, thus verticals, dipoles, etc. for these bands are not practical. The problem is, if I get the 10-30m version, I'll have to do without 40m. Similarly, if I choose the 15-40m, then I'll miss out on 12m (I already have an antenna for 10m). So the question is, which band should I go for, 12m or 40m?? I realize it probably depends on my interests (phone, cw, packet, etc.), but suffice it to say, I'm new to amateur radio, my cw is slow but building, and I'm not set up for packet yet...

Thanks in advance,
-Robert

I should have been more tactful !

If I remember correctly the 735 was the first ICOM xcvr that didn't
shift frequency when you changed sidebands.

I am pretty skeptical about small antennas on the lower frequencies, and
believe that the efficiency and effectiveness of physically small
antennas is very limited. Therefore, I am skeptical about a small 40m
loop. On the other hand, I am not sure how much activity you might find
on 12m. I have worked a few people there, but I think that 10m has much
more activity. I am especially fond of 17m, which both antennas
support. As long as you are not giving up 10m, you would probably be OK
with either antenna. Whether the MFJ loop is worth your money is a
separate question, but you probably have limited choices in limited space.

Mr. Bowen,

I commend you on your statement, " The FCC and the VEC determine whether
you have the basic skills to
become a ham: from there on, YOU are the one that determines whether
you are a ham or a lid."

Good insight. And true for more than just amateur radio; we are all totally
responsible for our own lives, attitudes and actions, whether we are aware
of that fact or not.

Thanks for a bit of inspiration and clear thinking. Wish we all saw more of
this on the air and the screen.

Regards,

Fred Zalupski

Watch out for the Radiax -- the power is not supposed to ever get to the end
of the cable! It's supposed to dribble out a bit at a time through a
partial shield -- for use in tunnels!

4386. Re: Icom W32A Handheld Transceiver Question

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-01 00:00:00 UTC
From: "John F. Samuels" <k2cib@acd-pc.com>
Message-ID: <ab6P4.104$8Be.458852@dca1-nnrp1.news.digex.net>
Source record: 80334

Also, for some reason this hand-held gets VERY hot when using transmit much,
to the point where it is very uncomfortable, even on low power.
When I needed a new battery, I purchased a 7.2 volt, 1000mAh, Ni-MH one from
MAHA. I did not find that the original battery, which provided more power,
had enough life to last through public service/emergency events. This one
is lighter and lasts "forever."
One more comment -- the controls are not intuitive to me. Just switching
from VHF to UHF, stopping the scan and then transmitting usually confuses me
long enough to miss an opportunity...

How in the world do I set the repeater shift (-1.6 MHz). It transmits simplex no matter if -, + or none. Also, when in memory mode can I display frequency, not channel? Are there special sets using keys with power-on? Gee, wish I had an ops manual...
Thanks, John, K2CIB

I can't answer directly, but my local police department has been using Cherokees for some time now.

If you go for one, check with the service department first to see if they are familiar with any modifications for police/public service for the onboard electronics. Also place this in the sales contract to protect the warranty.

From: Sean Baxter <NOSPAMsbaxter@gte.net>
Message-ID: <I9AP4.63$Z71.25210@dfiatx1-snr1.gtei.net>
Source record: 80147

The review in QST by N1RL is one of the best radio reviews by QST that I can remember. It was a balanced review accurately stating the pros and cons of this radio. Lately the QST radio reviews have been nothing more than advertisements glossing over the reviewed radio problems.

The performance numbers are not so hot, but not let that fool you. The filter, tx/rx audio, and color LCD performance of this radio are superb as outlined in the QST
review. The average ham installation will not come close to overloading this receiver.

You will not like this radio if you are a serious CW user/contester because of
the CW DSP quirks. It might not be a good field day radio. However, what was missed in the review is the auto-tuner is in-line during receive. Like the auto-tuner in the original 756, provides another 35db of out-of-band signal rejection. So, with the tuner in-line it should perform well in a field day environment if you wanted to subject your $2900 US radio to such elements.

It is not the perfect radio, it is noticeably better than the 756 I had in many aspects. Give Icom a cigar.

At 3000 bucks you should expect better. One must remember even that horror of radios the FT102 has a better set of receiver numbers. Putting in a narrow bandwidth roofing filter and some matched pairs of International Radio filters you have one hell of a radio, that the current crop of radios will be find hard to equal. For something that is designed in the year 1999 they have done a lousy job. If this this is going to be the future architecture of the future ham transceivers god help us all. Maybe Icom has done some research and have found that the ham population HF will drop 75% and decided there was no need for a decent receiver, who knows? Icom just cant seem to produce a decent HF radio receiver. Every one of there HF radios has had problems, i think they should really be ashamed of themselves and their engineers. If a company in CA called Elecraft can product a better receiver why cant they with all their resources? I just hope Yaesu is still wanting to stay the King of HF DX and Contest radios, and produce a receiver with low phase noise, a huge 3rd intercept point, great selectivity, and great dynamic range. The FT1000D would be a good canditate for this upgrade, by jingo all they would have to do is change some pin diodes and few other minor details to be truly the best. Some just have to reinvent the wheel. It is certain these manufacturers are just not looking hard at what makes a decent receiver, there heads must be buried in the sand. It seems Dr Ulrich Rhode has been writing about this ever since the days of Ham Radio Magazine, but techniques he talked about 20 years ago only seem to be filtering through now. All manufacturers really have to catch up with the times.

I have the original 756 which I began using after I sold my FT-1000D. The Vanilla 756 is a nice radio which I believe represents the best value in Ham Radio today, hands down. Before Icom gets my $3,000 the PRO better make coffee and be an excellent performer in ALL respects. Keep an eye out for the upgraded version of the PRO. If Icom is true to form, it should be announced very soon.

Absolutely not! Don't EVER dumb down the pilots and MD's exams. They're
not thorough enough as it is:

1.) Please try to find ONE example of the therapeutic value of
blood-letting??? Hey, it was one of the leading practices in the 17th and
18th centuries; yet today's medical schools do not include it in their
curriculums. Yet we trust these undereducated doctors!

2.) Quick poll of the AOPA members out there: How many of you were
tested on sewing and doping fabric as part of your exam??? I thought so.
Talk about "Pilot-Lite!" So how qualified a pilot are you if you can't
properly repair a hole in your 1948 Aeronca Sedan's horizontal
stabilizer????? (Yeah, it's all cloth over tubes, only the wings and engine
cowl are aluminum.) Yet you are trusted to fly your Cessna over *my*
house....this scares me!

See, not only Ham Radio has become "dumbed down"!

Has anyone had a problem with the display, that all the pixels light up and flash. This has been a problem with this receiver since I bought it 2 years ago. Sometimes it will come up right showing the frequency, etc, then other times all the pixels will light up and stay that way,

Help.

If I remember correctly, the '96 Blazer was the same body style as the '89-'98 pickups. Working in a LMRS shop, I've punched and grommeted holes in the passenger side of the transmission hump (on the vertical riser) with some success (fairly quick, but you get "greased" by the undercarriage - so that's the "quick and dirty method"). On my own '91 Silverado; I didn't want to try that - wanted to keep spinning drill bits away from the 3-day old clutch slave cylinder. I found that the broadcast radio antenna coax went out through a HUGE THICK grommet just below the A/C evaporator box on the passenger side firewall. It took some time, but I managed to pull two #10 stranded lines out to the power buss next to the A/C dryer without cutting into the grommet; just "stuffed and cussed" it through with the antenna lead.

Before anybody starts yelling: 1.) Yes, stray RFI could be coupled from the new power leads onto the coax shield; if repeat IF you aren't using some kind of noise choke on the power. My thought's (and my Elmer's at the shop) was that strange noises on the stereo were preferable to erratic operation of the ABS system should go out the driver's side. 2.) That power buss is where the high-amp accessories and the alternator are connected to the battery. This almost guarantees the need for a noise filter on the radio lines; but is a much cleaner location to tie down the B+ leads. I've powered much gear from those points, 75W Micors, MASTR II - based IMTS rigs, solid state HF amps. My own gear has been powered from that point since July '91 with virtually no problems - can't say *zero trouble* - when one of the diodes gave up in my alternator, the chokes couldn't keep the ringing noise out of 6M TX with the brick on. Since it also didn't charge the battery properly, I just decided to replace the alternator. Problem solved.

Just my own opinion .. I have decided that I don't like EBAY sales.

I would much rather come to some agreement instantly with some other post which sells an object ... and to find out immediately whether or not I will get the object. Waiting out several days to find out whether or not I win a bid does not get me the coveted object usually. To my experience, most EBAY bids wildly exceed the worth of the object. OK for the seller, I guess, and for those who simply MUST have it at any price.

Hello to all on the group. I would like to thank all that responded to my posts. Amazing how opinions differ and how many mailed about this subject. I will not bother you with the numbers in the affirmative, as most of you probably don't care to read such things.

1.) Jim, to answer you, medical science does make use of somewhat older, proven practices. Being the well read person I am sure you are, you apparently missed the modern use of LEACHES! I am sure you know what they are and their use in "Blood-Letting". Ask someone who has had a finger re-attached.

2.) As for sewing a patch on an Aeronca, if it was not such a chore, I would send you photos of my shop and myself as I was in the process of recovering a 1946 Aeronca 7AC. You would most likely start drooling when you saw the certified aircraft welds I did on the tubing. (My father was a welding instructor during the Big War.) The step and also the rear portion of the fuselage was rebuilt. And, yes, I did the doping and the painting and won a trophy the first time it was shown. I am not a current member of AOPA, and I doubt many members could handle the job you mentioned. But, if you care to visit the local chapter of the EAA, I would be happy to introduce you to some of the members. I might even lend you some past issues of Sport Aviation and let you see what that hobby has to offer. By the way Jim, when did you last read "Stick and Rudder?".

Again, I thank you all. See you on CW! 73, Dave-KA4CNH

PS: Even the wings on a 7AC are fabric covered!

I saw something on a dealers web site in March saying that Icom were about to release two new radios, the IC910H and IC718. I believe it said something about the IC910H having 2m and 70cm with optional 23cm.

I posted something to this newsgroup at the time, but the info disappeared from the dealers pages soon after.

All Electronics and places like DigiKey routinely sell those
little switches. While I don't know EXACTLY what switch is
in the IC-2A, you might be able to kludge something in.

If you do buy generic, be aware that some of those switches
DO NOT short, they just go from high resistance to moderate
resistance. This is actually ok in most matix applications.

I had to repair a radio in an old Dodge Caravan that had a
soft drink splash on it, and it took out about 5 or so of the
buttons. They aren't hard to replace, but if you can't get
exact, get one that is not as 'TALL' as the original. You can
always space it up, you can't always easily cut it down.

I'd have to actually look at my IC-3AT to see what the switch
is.

I don't have the manual for my K-1, but there doesn't appear to be a command for adjusting sidetone volume. Anyone know how to install a sidetone volume control in this keyer.
Thanks,
K3VJ

Well, I'm still trying to figure out what a 3rd order intercept point
level is, and what the hell it's significance is to receiver
performance :-)

Just have to reply!

1.) True, I left out leeches. Actually the leeches these days are used mainly for debrieding (sp?) dead tissue and the elimination (by ingestion) of bacterial matter in wounds. I was referring to the practice of removing blood in order to alleviate various maladies thought to be induced by "too much blood" - early hypertension repairs!

2.) Actually I have spent time with the local EAA. The Aeronca example was one I chose from personal experience. Fortunately, I don't have to scan in photos to you... try this website: http://yumaemall.com/cityofyuma/index.html. Down at the bottom of the page is a clickthrough for the photo album. I haven't looked recently, think I'm in one or two pics. This little red beauty has given me the bug; once my year as Jaycee Pres. is up, it's off to the FBO for instructions. Of course by the time I get my ticket, we'll have donated the old girl -not that I'd really want to land our classic 1300 lb. taildragger in a gusting Sonora desert crosswind anytime soon. BTW: I did push the story a bit...the tailfeathers were okay, there was a little bit of a rip in the fuse where the rudder bellcrank exited. And, actually, (shamefaced grin) we used an iron-on before the dope. EAA guy's idea!

> KB6IAC

OUT of curiosity Tom did you make your selection base purely on printed specs - or in actual, direct, real-life on-air comparisons? After all, individual units DO display performance variations from unit to unit, and it's what they actually do in YOUR specific environment that counts - NOT what shows up in a scope in some obscure distant electronics lab - and THAT was MY point... NOW, if the "ergonomics" and "blue display" was the governing factor, that's another thing...

Sign up for the Kenwood list at www.qth.net.

TSx20x (ie TS520, TS520S etc), TSx30x are hybrid rigs, solid state
front end with tube finals. The exception is the TS430S which is all
solid state (and a good radio IMHO, since this is what I have!)

TSx40x and beyond are all solid state.

VHF rigs I haven't a clue!
